FORM 10-K

(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2024

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

COMMISSION FILE NUMBER: 001-35731

InspireMD, Inc.

(Exact name of registrant as specified in its charter)

Delaware
(State or other jurisdiction of
incorporation or organization)

26-2123838
(I.R.S. Employer
Identification Number)

**6303 Waterford District Drive
Suite 215
Miami, Florida 33126**
(Address of principal executive offices)
(Zip Code)

Registrant's telephone number, including area code: **(888) 776-6804**

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Trading Symbol(s)	Name of each exchange on which registered
Common Stock, par value \$0.0001 per share	NSPR	Nasdaq Capital Market

Securities registered pursuant to Section 12(g) of the Act: none

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer

Accelerated filer

Non-accelerated filer

Smaller reporting company

Emerging growth company

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report.

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrant included in the filing reflect the correction of an error to previously issued financial statements.

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant's executive officers during the relevant recovery period pursuant to §240.10D-1(b).

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act) Yes No

The aggregate market value of the voting and non-voting stock held by non-affiliates of the registrant as of June 30, 2024, based on the price at which the common equity was last sold on such date, was \$52,421,148. For purposes of this computation only, all officers, directors and 10% or greater stockholders of the registrant are deemed to be affiliates.

Indicate the number of shares outstanding of each of the registrant's classes of common stock as of the latest practicable date.

<u>Class</u>	<u>Outstanding at March 12, 2025</u>
Common Stock, \$0.0001 par value	29,689,857

Documents incorporated by reference:

Portions of the Registrant's definitive proxy statement for its 2025 Annual Meeting of Stockholders, which the Registrant intends to file pursuant to Regulation 14A with the Securities and Exchange Commission not later than 120 days after December 31, 2024, are incorporated by reference into Part III of this Annual Report on Form 10-K.

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K contains “forward-looking statements,” which include information relating to future events, future financial performance, strategies, expectations, competitive environment and regulation, including, expected revenue growth, anticipated FDA approval and potential U.S. commercial launch. Words such as “may,” “will,” “should,” “could,” “would,” “predicts,” “potential,” “continue,” “expects,” “anticipates,” “future,” “intends,” “plans,” “believes,” “estimates,” and similar expressions, as well as statements in future tense, identify forward-looking statements. Forward-looking statements should not be read as a guarantee of future performance or results and will probably not be accurate indications of when such performance or results will be achieved. Forward-looking statements are based on information we have when those statements are made or our management’s good faith belief as of that time with respect to future events, and are subject to risks and uncertainties that could cause actual performance or results to differ materially from those expressed in or suggested by the forward-looking statements. Important factors that could cause such differences include, but are not limited to:

- our history of recurring losses and negative cash flows from operating activities, significant future commitments and the uncertainty regarding the adequacy of our liquidity to pursue our complete business objectives, and substantial doubt regarding our ability to continue as a going concern;
- our need to raise additional capital to meet our business requirements in the future and such capital raising may be costly or difficult to obtain and could dilute out stockholders’ ownership interests;
- market acceptance of our products;
- an inability to secure and maintain regulatory approvals for the sale of our products;
- negative clinical trial results or lengthy product delays in key markets;
- our ability to maintain compliance with the Nasdaq listing standards;
- our ability to generate significant revenues from our products;
- our dependence on a single manufacturing facility and our ability to comply with stringent manufacturing quality standards and to increase production as necessary;
- the risk that the data collected from our current and planned clinical trials may not be sufficient to demonstrate that our technology is an attractive alternative to other procedures and products;
- intense competition in our industry, with competitors having substantially greater financial, technological, research and development, regulatory and clinical, manufacturing, marketing and sales, distribution and personnel resources than we do;
- entry of new competitors and products and potential technological obsolescence of our products;
- inability to carry out research, development and commercialization plans;
- loss of a key customer or supplier;
- technical problems with our research and products and potential product liability claims;
- product malfunctions;
- price increases for supplies and components;
- insufficient or inadequate reimbursement by governmental and other third-party payers for our products;
- our efforts to successfully obtain and maintain intellectual property protection covering our products, which may not be successful;
- adverse federal, state and local government regulation, in the United States, Europe or Israel and other foreign jurisdictions;
- the fact that we conduct business in multiple foreign jurisdictions, exposing us to foreign currency exchange rate fluctuations, logistical and communications challenges, burdens and costs of compliance with foreign laws and political and economic instability in each jurisdiction;
- security, political and economic instability in the Middle East that could harm our business, including due to the current security situation in Israel; and
- current or future unfavorable economic and market conditions and adverse developments with respect to financial institutions and associated liquidity risk

The foregoing does not represent an exhaustive list of matters that may be covered by the forward-looking statements contained herein or risk factors that we are faced with that may cause our actual results to differ from those anticipated in our forward-looking statements. You should review carefully the risks and uncertainties described under the heading “Item 1A. Risk Factors” in this Annual Report on Form 10-K for a discussion of these and other risks that relate to our business and investing in shares of our common stock. Moreover, new risks regularly emerge, and it is not possible for our management to predict or articulate all the risks we face, nor can we assess the impact of all risks on our business or the extent to which any risk, or combination of risks, may cause actual results to differ from those contained in any forward-looking statements. All forward-looking statements included in this Annual Report are based on information available to us on the date of this Annual Report. Except to the extent required by applicable laws or rules, we undertake no obligation to publicly update or revise any forward-looking statement, whether as a result of new information, future events or otherwise. All subsequent written and oral forward-looking statements attributable to us or persons acting on our behalf are expressly qualified in their entirety by the cautionary statements contained above and throughout this Annual Report.

The forward-looking statements contained in this Annual Report on Form 10-K are expressly qualified in their entirety by this cautionary statement. We do not undertake any obligation to publicly update any forward-looking statement to reflect events or circumstances after the date on which any such statement is made or to reflect the occurrence of unanticipated events.

All information in this Annual Report on Form 10-K relating to shares or price per share reflects the 1-for-15 reverse stock split effected by us on April 26, 2021.

PART I

In this Annual Report on Form 10-K, unless the context requires otherwise, the terms “we,” “our,” “us,” or “the Company” refer to InspireMD, Inc., a Delaware corporation, and its subsidiaries, including InspireMD Ltd., taken as a whole.

Item 1. Business.

Overview

We are a medical device company focusing on the development and commercialization of products for the treatment of carotid artery disease and other vascular disease, including our proprietary CGuard™ stent platform. A stent is an expandable scaffold-like device, usually constructed of a metallic material, that is inserted into the lumen of an artery to create patency and improved blood flow. A sleeve of MicroNet™ mesh is attached over a stent to provide embolic protection both during and after stenting procedures.

Our CGuard™ carotid embolic prevention system (“CGuard EPS”) combines MicroNet and a unique self-expandable nitinol stent in a single device for use in carotid artery revascularization. Our CGuard EPS originally received CE mark approval under Medical Device Directive 93/42/EEC (“MDD”) in the European Union (“EU”) in March 2013 and was fully launched in Europe in September 2015. Subsequently, we launched CGuard EPS in over 30 countries and on February 3, 2021, we executed a distribution agreement with Chinese partners for the purpose of expanding our presence in the Asian markets. In January 2024, we received CE mark recertification under the EU’s Medical Device Regulation regulatory framework.

On September 8, 2020, we received approval from the U.S. Food and Drug Administration (“FDA”) of our Investigation Device Exemption (“IDE”), thereby allowing us to proceed with a pivotal study of our CGuard™ Carotid Stent System, C-GUARDIANS, for prevention of stroke in patients in the United States. C-GUARDIANS is a prospective, multicenter, single-arm, pivotal study to evaluate the safety and efficacy of the CGuard™ Carotid Stent System when used to treat symptomatic and asymptomatic carotid artery stenosis in patients undergoing carotid artery stenting (“CAS”). The study, which completed enrollment in June 2023, enrolled 316 patients across 24 trial sites in the U.S. and Europe and from April 2023 included deployment of the CGuard stent using CGuard Prime, our next generation CAS stent platform.

The primary endpoint was a composite of: (1) incidence of major adverse events including Death (all-cause mortality), any Stroke, and Myocardial Infarction (DSMI) through 30-days post index procedure, or (2) ipsilateral stroke from day 31 to day 365 post-procedure. All events were adjudicated by an independent clinical events committee. The composite index was compared to a performance goal based on the observed rate of the two components of the primary endpoint from previous pivotal stent trials which are considered industry standard. The performance goal was considered met if the upper bound of the two-sided 95% confidence interval calculated from the observed primary endpoint rate is < 11.6% and the p-value is less than 0.025.

In November 2023, we announced positive 30-day follow up results from the C-GUARDIANS trial in which stenting with the CGuard Carotid Stent System in patients with carotid artery stenosis and at high risk for carotid endarterectomy had a DSMI rate of 0.95%, measured from the date of the procedure through 30 days follow-up post-procedure. In May 2024, we announced positive one-year follow up results from the C-GUARDIANS trial, with a rate of 30-day DSMI and ipsilateral stroke between 31 and 365 days of 1.95%.

These data were used to support the premarket approval (“PMA”) submission in September 2024 with a view to potential FDA approval of the CGuard Prime carotid stent system in the first half of 2025.

In October 2024, the FDA approved the Company’s IDE to initiate the CGUARDIANS II pivotal study of its CGuard Prime 80cm Carotid Stent System during transcarotid revascularization (TCAR) procedures.

In October 2023, the Centers for Medicare and Medicaid Service (“CMS”) issued its final National Coverage Determination (“NCD”), expanding coverage for both CAS and TCAR to include both asymptomatic and standard risk patients, significantly expanding and supporting the future growth of the U.S. CAS addressable market.

We continue to invest in current and future potential new indications, products and manufacturing enhancements for CGuard that are expected to reduce cost of goods and/or provide the best-in-class performing delivery systems, such as CGuard Prime. In furtherance of our strategy that focuses on establishing the CGuard Carotid Stent System as a viable alternative to vascular surgery, we are developing a new transcarotid artery revascularization (TCAR) system, SwitchGuard™ neuroprotection system (“SwitchGuard NPS”), for transcarotid access and neuro protection. In addition, we intend to explore new indications for CGuard to leverage the advantages of stent design and mesh protection, well suited in labels such as acute stroke with tandem lesions.

We consider our current addressable market for our CGuard Carotid Stent System and SwitchGuard NPS to be both symptomatic and asymptomatic individuals with diagnosed high-grade carotid artery stenosis for whom intervention is preferable to medical (drug) therapy. This group includes not only carotid artery stenting patients but also individuals undergoing carotid endarterectomy, as the two approaches compete for the same patient population. Assuming full penetration of the intervention caseload by CGuard, we estimate that the addressable market for CGuard Carotid Stent System and SwitchGuard NPS is approximately \$1.3 billion (source: Health Research International Personal Medical Systems, Inc. September 13, 2021 Results of Update Report on Global Carotid Stenting Procedures and Markets by Major Geography and Addressable Markets and internal estimates). According to this same report and internal estimates, assuming full penetration of treatment for all individuals diagnosed with high-grade carotid artery stenosis, we estimate the total available market for CGuard Carotid Stent System and SwitchGuard NPS to be approximately \$9.3 billion, which may grow over time if expanded treatment options such as CGuard Carotid Stent System and SwitchGuard NPS lead to increased patient screening for carotid artery disease.

We were organized in the State of Delaware on February 29, 2008. In October 2024, we established our global headquarters in Miami, Florida to support the anticipated U.S. launch and commercialization of the CGuard Prime carotid stent system.

Private Placement

On May 12, 2023, we entered into a securities purchase agreement (the “Purchase Agreement”) pursuant to which we agreed to sell and issue in a private placement (the “Private Placement Offering”) an aggregate of 10,266,270 shares (the “Private Placement Shares”) of our common stock, pre-funded warrants (the “Pre-Funded Warrants”) to purchase up to 15,561,894 shares of common stock and warrants to purchase up to an aggregate of 51,656,328 shares of common stock, consisting of Series H warrants to purchase up to 12,914,086 shares of common stock (the “Series H Warrants”), Series I warrants to purchase up to 12,914,078 shares of common stock (the “Series I Warrants”), Series J warrants to purchase up to 12,914,086 shares of Common Stock (the “Series J Warrants”) and Series K warrants to purchase up to 12,914,086 shares of common stock (the “Series K Warrants” and together with the Series H Warrants, Series I Warrants and Series J Warrants, the “Warrants”), at an offering price of \$1.6327 per Private Placement Share and associated Warrants and an offering price of \$1.6326 per Pre-Funded Warrant and associated Warrants.

The Pre-Funded Warrants will be immediately exercisable at an exercise price of \$0.0001 per share and will not expire until exercised in full. The Warrants will be immediately exercisable upon issuance at an exercise price of \$1.3827 per share, subject to adjustment as set forth therein. The Warrants have a term of the earlier of (i) five years from the date of issuance and (ii) (A) in the case of the Series H Warrants, 20 trading days following the Company’s public release of primary and secondary end points related to one year follow up study results from the Company’s C-GUARDIANS pivotal trial, (B) in the case of the Series I Warrants, 20 trading days following the Company’s announcement of receipt of Premarket Approval from the Food and Drug Administration (“FDA”) for the CGuard Prime Carotid Stent System (135 cm), (C) in the case of the Series J Warrants, 20 trading days following the Company’s announcement of receipt of FDA approval for the SwitchGuard and CGuard Prime 80 and (D) in the case on the Series K Warrants, 20 trading days following the end of the fourth fiscal quarter after the fiscal quarter in which the first commercial sales of the CGuard Carotid Stent System in the United States begins.

The Warrants may be exercised on a cashless basis if there is no effective registration statement registering the shares underlying the Warrants. On May 23, 2023, we filed registration statement on Form S-3 (File No. 333-272149) registering the shares underlying the Warrants, which was declared effective by the Securities and Exchange Commission on June 2, 2023. Under the terms of the Pre-Funded Warrants and Warrants, certain of the selling stockholders may not exercise the Pre-Funded Warrants or Warrants to the extent such exercise would cause such selling stockholder, together with its affiliates and attribution parties, to beneficially own a number of shares of common stock which would exceed 4.99% or 9.99% of our then outstanding common stock following such exercise, excluding for purposes of such determination common stock issuable upon exercise of the Pre-Funded Warrants or Warrants which have not been exercised. The Warrants may be exercised into pre-funded warrants if the selling stockholder is unable to exercise the Warrant due to the foregoing beneficial ownership limitation or at the selling shareholder’s election.

Following the announcement of the one year follow up study results from the Company’s C-GUARDIANS trial, Series H Warrants to purchase 12,914,086 shares of common stock were exercised in full into 292,996 of shares of common stock and pre-funded warrants to purchase 12,621,090 shares of common stock. The net proceeds to the Company from the exercise of the Series H Warrants were \$16.9 million, after deducting placement agent fees. The Series H warrants, each exercisable at \$1.3827 per common share and \$1.3826 per pre-funded warrant, were issued as part of the private placement financing that the Company consummated on May 15, 2023.

Our Industry

Carotid

Carotid arteries are located on each side of the neck and provide the primary blood supply to the brain. Carotid artery disease, also called carotid artery stenosis, is a type of atherosclerosis (hardening of the arteries) that is one of the major risk factors for ischemic stroke. In carotid artery disease, plaque accumulates in the artery walls, narrowing the artery and disrupting the blood supply to the brain. This disruption in blood supply, together with plaque debris breaking off the artery walls and traveling to the brain, are significant causes of stroke. According to the World Health Organization (https://www.who.int/cardiovascular_diseases/resources/atlas/en/) every year, 15 million people worldwide suffer a stroke, and nearly six million die and another five million are left permanently disabled. According to the same source, stroke is the second leading cause of disability, after dementia.

In 2022, three million people between the age of 50 and 89 years old were estimated to be diagnosed with high grade carotid artery disease, of which, approximately 394,000 of those required intervention (according to the Health Research International Personal Medical Systems, Inc. September 13, 2021 Results of Update Report on Global Carotid Stenting Procedures and Markets by Major Geography and Addressable Markets). There are three current interventional treatments used for carotid artery disease. The first is a carotid endarterectomy, where a surgeon accesses the blocked carotid artery through an incision in the neck, and then surgically removes the plaque. The second is transcatheter carotid artery revascularization (TCAR) where a surgeon accesses the blocked carotid artery through an incision in the neck, and then places a stent to open the artery and prevent embolization while combining high-rate blood flow reversal to protect the brain. The third is carotid artery stenting (CAS), which is a minimally invasive endovascular treatment for using stents and carotid embolic protection systems to protect against plaque and debris traveling downstream, blocking off the vessel and disrupting blood flow. We believe that the availability of less invasive treatment options like TCAR and CAS should increase the number of patients being treated since they avoid the need for complex surgery.

Our Products

MicroNet Mesh Platform Technology

MicroNet is our proprietary knitted mesh which wraps around a stent to protect patients from plaque prolapse and embolization upon deployment. MicroNet is made of a single fiber from a biocompatible polymer widely used in medical implants. The size, or aperture, of the current MicroNet ‘pore’ is only 150-180 microns, designed to maximize protection against the potentially dangerous plaque and thrombus. The MicroNet mesh is the core technology around which we have developed products for specific applications.

CGuard – Carotid Artery Applications

Our CGuard EPS combines our MicroNet mesh and a self-expandable nitinol stent (a stent that expands without balloon dilation pressure or need of an inflation balloon) in a single device for use in carotid artery applications. MicroNet is placed over and attached to the outside of an open cell nitinol stent, forming a highly flexible implant that conforms to the carotid anatomy designed to trap debris and emboli that can dislodge from the diseased carotid artery and potentially travel to the brain and cause a stroke. This danger is one of the greatest limitations of carotid artery stenting with conventional carotid stents.

We believe that our CGuard EPS design provides advantages over existing therapies in treating carotid artery stenosis, such as conventional carotid stenting and surgical endarterectomy, given the superior embolic protection characteristics provided by the MicroNet. We believe the MicroNet will provide acute embolic protection at the time of the procedure, but more importantly, will provide post-procedure protection against embolic dislodgement. It is in this post-procedure time frame that embolization is the source of post-procedural strokes in the brain. Schofer, et al. (“Late cerebral embolization after emboli-protected carotid artery stenting assessed by sequential diffusion-weighted magnetic resonance imaging,” *Journal of American College of Cardiology Cardiovascular Interventions*, Volume 1, 2008) have shown that the majority of the incidents of embolic showers associated with carotid stenting occur post-procedure.

Our CGuard EPS originally received CE mark approval in the EU in March 2013 and was fully launched in Europe in September 2015. Subsequently, we launched CGuard EPS in 30 plus countries and on February 3, 2021, we executed a distribution agreement with Chinese partners for the purpose of expanding our presence in China.

On September 8, 2020, we received approval from the FDA of our IDE, thereby allowing us to proceed with a pivotal study of our CGuard™ Carotid Stent System, C-GUARDIANS, for prevention of stroke in patients in the United States. C-GUARDIANS is a prospective, multicenter, single-arm, pivotal study to evaluate the safety and efficacy of the CGuard™ Carotid Stent System when used to treat symptomatic and asymptomatic carotid artery stenosis in patients undergoing carotid artery stenting. The study, which completed enrollment in June 2023, enrolled 316 patients across 24 trial sites in the U.S. and Europe and from April 2023 included deployment of the CGuard stent using CGuard Prime, our next generation CAS stent platform.

The primary endpoint is a composite of: (1) incidence of major adverse events including Death (all-cause mortality), any Stroke, and Myocardial Infarction (DSMI) through 30-days post index procedure, or (2) ipsilateral stroke from day 31 to day 365 post-procedure. All events are adjudicated by an independent clinical events committee. The composite endpoint will be compared to a performance goal based on the observed rate of the two components of the primary endpoint from previous pivotal stent trials which are considered industry standard. The performance goal will be considered met if the upper bound of the two-sided 95% confidence interval calculated from the observed primary endpoint rate is < 11.6% and the p-value is less than 0.025.

In November 2023, we announced positive 30-day follow up results from the C-GUARDIANS trial in which stenting with the CGuard Carotid Stent System in patients with carotid artery stenosis and at high risk for carotid endarterectomy had a DSMI rate of 0.95%, measured from the date of the procedure through 30 days follow-up post-procedure. In May 2024, we announced positive one-year follow up results from the C-GUARDIANS trial, with a rate of 30-day DSMI and Ipsilateral stroke between 31 and 365 days of 1.95%. These data were used to support the premarket approval, or PMA, submission in September 2024 with a view to potential FDA approval of the CGuard Prime carotid stent system in the first half of 2025.

CGuard Prime Stent System

The CGuard Prime stent system is a mesh-covered self-expanding carotid stent that is loaded into a rapid exchange (Rx) delivery system that is subject to regulatory approval.

The CGuard Prime Carotid Stent is a self-expanding nitinol stent covered with a MicroNet bio-stable sleeve woven from a single strand of 23 µm Polyethylene Terephthalate (PET). The MicroNet sleeve is designed to trap and seal thrombus and plaque against the vessel wall, providing continuous embolic prevention. The CGuard Prime Carotid Stent is available in diameters ranging from 6mm to 10mm and in lengths of 20, 30, 40 and 60mm. The CGuard Prime delivery system is a rapid exchange (Rx), delivery system with a 6Fr profile that can accommodate all stent sizes from 6mm to 10mm. In the U.S., we are currently seeking approval only for stent sizes in 8, 9 and 10 mm in diameter with lengths of 30 and 40 mm.

CGuard Prime 135 cm advances the first generation CGuard transfemoral delivery system with a new handle design for ease of deployment and a new catheter design for more flexible navigation of tortuous anatomy. The CGuard Prime product was used in 32 patients out of 315 patients in the CGuardians study, since April 2023. In October 2024, the FDA approved the Company's IDE to initiate the CGUARDIANS II study of its CGuard Prime 80cm Carotid Stent System for use in the indication of transcarotid revascularization (TCAR) procedures.

The CGuard Prime Technical Documentation is currently under Notified Body review for EU MDR certification.

SwitchGuard NPS

SwitchGuard NPS is a Class IIa neuroprotection system (NPS) that we have developed and that is subject to regulatory approval, composed of medical grade tubing with male Luer lock connectors at each end and an in-line 200-micron blood filter. When connected to the included arterial and venous sheaths, the system is intended as an external arterial-venous (A-V) shunt, allowing arterial blood to flow into the venous system, while filtering particulate before returning blood to the patient on the venous side.

SwitchGuard is being developed to answer a need of flow reversal for cerebral protection in carotid interventions since symptomatic distal embolization, caused by the release of material (thrombotic, necrotic, or atherosclerotic) from the site of the lesion during the intervention, is the most frequent and important complication of CAS. Reversing blood flow has been shown to reduce stroke risk during carotid artery procedures.

We submitted an IDE to the FDA for the C-GUARDIANS III clinical trial in December 2024, which, if approved, would allow us to initiate a clinical trial to support the clearance of the SwitchGuard NPS coupled with CGuard Prime.

Acute Stroke with Tandem Lesions

It is estimated that 20-30% of acute ischemic strokes are caused by large vessel occlusion involve tandem lesions- high grade stenosis/occlusion of the internal carotid artery plus thrombotic occlusion of an intracranial vessel. Currently there is no indicated use of CAS for these lesions during stroke treatment when the placement of an embolic protection device is not possible. We believe CGuard Prime is optimally suited for intervention in this acute setting by its design (flexible / low metal structure) as well as MicroNet mesh offering embolic protection both during and post procedure. Our goal is to develop CGuard Prime to mitigate strokes in this acute setting.

In November 2023, we announced a strategic agreement with Jacobs Institute to execute an early feasibility study of CGuard Prime for the treatment of acute stroke patients with tandem lesions. The study is expected to enroll 15 acute stroke patients across three U.S. sites to explore the safety and feasibility of using CGuard Prime in this setting.

MGuard Prime

We historically developed and sold the MGuard Prime embolic protection system (“MGuard Prime EPS”) which was marketed for use in patients with acute coronary syndromes, notably acute myocardial infarction (heart attack) and saphenous vein graft coronary interventions. Over the past years there has been a shift in industry preferences towards drug eluting stents. As a result of declining sales and utilization of the MGuard Prime EPS, which was largely driven by the predominant industry preferences favoring drug-eluting stents, during the second quarter of 2022 we ceased sales of MGuard Prime EPS following a phase out period.

Completed Clinical Trials for CGuard EPS

CARENET

The CARENET trial was the first multi-center study of CGuard EPS following the receipt of CE mark of this device in March 2013. The CARENET trial was designed to evaluate feasibility and safety of CGuard EPS in treatment of carotid lesions in consecutive patients suitable for CAS in a multi-operator, real-life setting. The acute, 30-day, magnetic resonance imaging (“MRI”), ultrasound and six-month clinical event results were presented at the LINC conference in Leipzig, Germany in February, 2015. In the third quarter of 2015, the results of the CGuard CARENET trial were published in the Journal of the American College of Cardiology. In November 2015, positive twelve-month follow-up data from the CGuard CARENET trial was presented at the 42nd Annual Symposium on Vascular and Endovascular Issues, documenting the benefits of the CGuard MicroNet technology as well as the patency benefits (maintaining the artery open) of the internal and external carotid arteries at twelve months. In September 2022, the results of the CGuard CARENET trial five year follow up were published in the Journal of the American College of Cardiology: Cardiovascular Interventions Vol. 15, No 18, 2022 September 26, 2022:1883-1891. There was no ipsilateral stroke or ipsilateral stroke-related death which occurred throughout the five years. In addition, no stent restenosis or external carotid artery occlusion occurred in CARENET by 5 years, indicating normal healing and uncompromised side-branch patency.

MACCE (myocardial infarction (“MI”), stroke or death) rate was 0.0% at 30 days. At six months, there was one death, which was not device or procedure-related but did result in a MACCE rate of 3.6% at six months. At twelve months there were two additional deaths, which were not device or procedure-related resulting in a MACCE rate of 10.7% at one year.

	30 days (n=30)	6 months (n=28)	12 months (n=28)
MACCE (MI, stroke, death)	(0) 0.0%	(1) 3.6%	(3) 10.7%
MI	(0) 0.0%	(0) 0.0%	(0) 0.0%
stroke	(0) 0.0%	(0) 0.0%	(0) 0.0%
death	(0) 0.0%	(1) 3.6%	(3) 10.7%

CAS carries the risk of cerebral embolization during and following the procedure, leading to life-threatening complications, mainly cerebral ischemic events. Diffusion-weighted magnetic resonance imaging (DW-MRI) is a sensitive tool used to identify cerebral emboli during CAS by measuring “lesions” within the brain which are areas that are ischemic and do not receive oxygenated blood due to cerebral emboli. In the CARENET trial, 37.0% of patients treated with CGuard EPS had new ischemic lesions at 48 hours after the procedure, with an average volume of 0.039 cm³. Of these lesions, there was only one that remained at 30 days following the procedure and all others had resolved. Complete details appear in the following table. Where there is a second number shown below after a ± symbol, it indicates the potential error in the measurement.

	48 hours n=27	30 days n=26
Subjects with new Acute Ischemic Lesions (“AIL”)	10	1
Incidence of new lesions	37.0%	4.0%
Total number new AIL	83	1
Avg. number new AIL per patient	3.19 ± 10.33	0.04 ± 0.20
Average lesion volume (cm ³)	0.039 ± 0.08	0.08 ± 0.00
Maximum lesion volume (cm ³)	0.445	0.116
Permanent AIL at 30 days	—	1

The healing process of the tissue and in-stent restenosis can be measured by a non-invasive form of ultrasound called duplex ultrasound. This type of ultrasound measures the velocity of the blood that flows within the carotid arteries, which increases exponentially as the lumen of the internal carotid artery narrows and the percent stenosis increases. One of the measurements is called PSV (peak systolic volume) and is known to be highly correlated to the degree of in-stent restenosis; PSV values higher than 300 cm/sec are indicative of >70% stenosis, while PSV values lower than 104 cm/sec are indicative of <30% restenosis and healthy healing. In the CARENET trial, duplex ultrasound measurements done at 30 days, 6 months and 12 months following the stenting procedure all attest to healthy normal healing without restenosis concerns, as the PSV values were 60.96 cm/sec ± 22.31, 85.24 cm/sec ± 39.56, and 90.22 cm/sec ± 37.72 respectively. The internal carotid artery was patent in all patients (100%).

The conclusions of the CARENET trial were:

- The CARENET trial demonstrated safety of the CGuard EPS stent, with a 30 day MACCE rate of 0%.
- Incidence of new ipsilateral lesions (percent of patients with new lesions on the ipsilateral side (same side where the stent was employed)) at 48 hours was reduced by almost half compared to published data, and volume was reduced almost tenfold.
- All but one lesion had resolved completely by 30 days.
- Twelve-month data showed no stroke or stroke-related deaths, and no cardiac adverse events.
- Five-year data showed no ipsilateral stroke or ipsilateral stroke-related deaths, and no stent restenosis or external carotid artery occlusion occurred in CARENET by 5 years, indicating normal healing and uncompromised side-branch patency.
- CGuard EPS offers enhanced benefits for patients undergoing CAS with unprecedented safety.

Physician-Sponsored Clinical Trials for CGuard—PARADIGM-101 and PARADIGM -500 Studies

PARADIGM-101 (Prospective evaluation of All-comer percutaneous carotid revascularization in symptomatic and increased-risk asymptomatic carotid artery stenosis, using CGuard™ Mesh-covered embolic prevention stent system-101) was an investigator-led, single center study with the objective of evaluating feasibility and outcome of routine use of CGuard EPS in 101 consecutive unselected all-comer patients referred for carotid revascularization, initiated in 2015. In May 2016, the 30-day results were presented at the EuroPCR 2016 Late-Breaking Clinical Trial Session in Paris, and in the Journal of EuroIntervention. In Dec 2020, the 12 month results were presented in the Official Journal of the EuroPCR and the European Association of Percutaneous Coronary Interventions, EuroIntervention 2020;16:e950-e952. DOI: 10.4244/EIJ-D-19-01014) Key findings from the PARADIGM-101 study and the follow-up data are as follows:

- CGuard EPS delivery success was 99.1%. The clinical evaluation also found no device foreshortening or elongation;
- Angiographic diameter stenosis or vessel narrowing was reduced from 83±9% to only 6.7±5% (p<0.001);
- Periprocedural death/major stroke/ myocardial infarction (“MI”) rates were 0%;
- Between 30 days and 12 months, there were no strokes or stroke-related deaths. There were four non -device related deaths (heart failure exacerbation, urosepsis, pulmonary embolism and microcellular pulmonary cancer).

The results of the PARADIGM-101 study demonstrated that CGuard EPS can safely be used in a high risk, all-comer population of patients with carotid artery stenosis and indicated that routine use of CGuard EPS may prevent cerebral events, such as strokes, by holding plaque against the vessel wall, preventing emboli from being released into the blood stream. The PARADIGM-101 study found that CGuard EPS is applicable in up to 90% of all-comer patients with carotid stenosis.

PARADIGM-500 (prospective evaluation of all-comer percutaneous carotid revascularization in symptomatic and increased-risk asymptomatic carotid artery stenosis, using CGuard™ mesh-covered embolic prevention stent system-500) is an investigator-initiated, single center study designed to evaluate the outcomes of routine CGuard EPS in consecutive all-comer patients accepted by a multidisciplinary committee for carotid revascularisation. The PARADIGM-500 study is an extension of the of PARADIGM-101 study, which was initiated in 2015.

An update of the PARADIGM-500 study was presented at the Veith 2024 conference in New York, held from November 19-23, 2024. Key findings were:

- 30-day death or stroke rate of 0.75%
- 30-day death, stroke and myocardial infarction (DSMI) rate of 0.94%
- 12-month freedom from ipsilateral stroke, in stent restenosis (ISR) and target lesion revascularization (TLR) combined rate of 99.6%
- At 12-month, the ISR rate (by Core Lab) is lower than those reported in the literature of first-generation stents (Naylor R, et al. European Society for Vascular Surgery (ESVS) 2023 Clinical Practice Guidelines on the Management of Atherosclerotic Carotid and Vertebral Artery Disease. Eur J Vasc Endovasc Surg. 2023).
- No cases of stent thrombosis (0%) with CGuard EPS through 12 months of follow up

The Paradigm-500 study confirms that carotid artery stenting (CAS) with the CGuard EPS stent delivers reliable and low rates of 30-day composite DSMI, 12-month ipsilateral stroke, ISR and no instances of stent thrombosis in a wide range of patient at standard and high risk for CEA.

Clinical Results and Mechanical Properties of the Carotid CGUARD Double-Layered Embolic Prevention Stent Study

“Clinical Results and Mechanical Properties of the Carotid CGUARD Double-Layered Embolic Prevention Stent Study” was an investigator-led, prospective single-center study which evaluated CGuard EPS in 30 consecutive patients with internal carotid artery stenosis disease with the objective of reporting early clinical outcomes with a novel MicroNet covered stent for the internal carotid artery and the in vitro investigation of the device’s mechanical properties. In October 2016, the 30-day positive results were published online-ahead-of-print in the Journal of Endovascular Therapy.

Key findings from the study are as follows:

- 100% success in implanting CGuard EPS without residual stenosis;
- No peri- or post-procedural complications;
- No deaths, major adverse events, minor or major strokes, or new neurologic symptoms during the six months following the procedure;
- Modified Rankin Scale improved for the symptomatic patients from 1.56 prior to the procedure to 0 afterwards;
- All vessels treated with CGuard EPS remained patent (open) at six months; and
- DW-MRI performed in 19 of 30 patients found no new ipsilateral lesions after 30 days and after six months compared with the baseline DW-MRI studies.

Additionally, based on engineering evaluations, the study concluded that CGuard EPS provides a high radial force and strong support in stenotic lesions. The stent is easy to use and safe to implant because it does not foreshorten and its structure adapts well to changes in diameter and direction of tortuous vascular anatomies. The MicroNet mesh of CGuard did not cause any changes to specific mechanical parameters of the underlying stent.

Safety and Efficacy of the New Micromesh-Covered Stent CGuard in Patients Undergoing Carotid Artery Stenting: Early Experience From a Single Center

“Safety and Efficacy of the New Micromesh-Covered Stent CGuard in Patients Undergoing Carotid Artery Stenting: Early Experience From a Single Center” was an investigator-led, single-center study which evaluated CGuard EPS in 82 consecutive patients. The aim of the study was to evaluate the safety (technical success) and efficacy (clinical success) of the CGuard stent system – a new nitinol stent covered by a closed-cell polyethylene and terephthalate mesh designed to prevent embolic events. In 2017, the 30-day positive results were published online-ahead-of-print in the *European Journal of Vascular and Endovascular Surgery* (2017), <https://doi.org/10.1016/j.ejvs.2017.09.015>.

Key findings from the study are as follows:

- 100% success in implanting CGuard EPS;
- One case of acute stent thrombosis occurred within 4 hours of the procedure;
- One minor stroke was recorded within the peri-operative period following the acute stent thrombosis, mentioned above;
- No new adverse neurological events were recorded at the post-operative period.
- DW-MRI was performed to assess the occurrence of new ischaemic brain lesions from the target vessel following placement of the CGuard stent peri- (48-72 hours) and post-operatively (30 days) in 21 and 11 patients, respectively. Five of 21 patients (23.8%) had new ischaemic brain lesions peri-operatively (48-72 hours) on the ipsilateral side, for a total number of 30 lesions, with an average lesion volume of 0.039 +/- 0.025 cm³. Four patients (19.1%) had new ischaemic brain lesions on the contralateral side, for a total number of nine lesions, with an average lesion volume of 0.019 +/- 0.011 cm³ (range 0.016-0.034 cm³). At the postoperative period, spontaneous resolution was noted in all the lesions recorded in the peri-operative period in the 11 patients participating. Only one symptomatic patient had two new ischaemic brain lesions (1 ipsilateral and 1 contralateral).

CGUARD Mesh-Covered Stent in Real World: The IRON-Guard Registry

“CGUARD Mesh-Covered Stent in Real World: The IRON-Guard Registry using CGuard EPS” was a physician initiated prospective multi-center registry that included 200 patients from 12 medical centers in Italy. The objective of the study was to report 30-day outcomes (including MACCE) in a prospective series of patients who were treated with CGuard EPS between April 2015 and June 2016. In January 2017, 30-day results were presented at the Leipzig Interventional Course (LINC) 2017 and published in the Journal of EuroIntervention in May 2017. The 12-month follow-up was published in the Journal of EuroIntervention in October 2018.

Key 30-day results presented were:

- 100% success in implanting CGuard EPS;
- No MI, major stroke or death at 30 days;
- There were two transient ischemic attacks and five periprocedural minor strokes, including one thrombosis solved by surgery.
- Total elimination of post-procedural neurologic complications by 30 days;
- DW-MRI performed pre-procedure and between 24- and 72-hours post-procedure in 61 patients, indicated that 12 patients had new micro emboli (19%).
- At 12-month, there were no new major neurological adverse events, thrombosis or external carotid occlusion recorded;
- One myocardial infarction occurred at 12 months.

Initial Clinical Study of the New CGuard EPS MicroNet Covered Carotid Stent: “One Size Fits All”

“Initial Clinical Study of the New CGuard EPS MicroNet Covered Carotid Stent: ‘One Size Fits All’” was an investigator-led, single-center study, which evaluated CGuard EPS in 30 consecutive patients with symptomatic stenosis of the internal carotid artery with the objective of evaluating the CGuard EPS MicroNet covered stent for its ability to adjust to different vessel diameters. The results of the study were published in the Journal of Endovascular Therapy in May 2019. The conclusion of the study as reported was that CGuard EPS has high conformability combined with an almost equivalent outward radial force at expansion diameters ranging from 5.5 to 9.0 mm. The first clinical results demonstrate the “One Size Fits All” stent can be implanted in internal carotid arteries with reference diameters within this range.

Key findings from the study were as follows:

- 100% technical success in implanting CGuard EPS;
- No neurological events within 30 days;
- The chronic outward force normalized by stent length demonstrated a near-equivalent radial force outcome; and
- The stent displayed only a minor difference between the minimal radial force at 9.0 mm (0.195 N/mm) and the maximal radial force at 5.5 mm (0.330 N/mm).

Preliminary Results from a Prospective Real-World Multicenter Clinical Practice of Carotid Artery Stenting Using the CGuard Embolic Prevention System: The IRONGUARD 2 Study

“Preliminary Results From a Prospective Real-World Multicenter Clinical Practice of Carotid Artery Stenting Using the CGuard Embolic Prevention System: The IRONGUARD 2 Study” is a physician initiated prospective multi-center registry enrolling 733 patients from 20 medical centers in Italy, from January 2017 to June 2019. The objective of the study is to evaluate periprocedural (24 hours), post-procedural (up to 30 days), and 12-month outcomes in a largest, prospective, multicenter series of patients submitted for protected carotid artery stenting with the CGuard Embolic Prevention System. The 24-hour, 30-day and 12-month preliminary results (data available on 726 patients out of the 733 treated) were presented at the Leipzig Interventional Course (LINC) in January 2021. The study’s preliminary results from the IRONGUARD 2 study suggested in a real-world evaluation of carotid artery stenting, CGuard EPS can be safely used for treatment of extracranial carotid artery stenosis, allowing a low rate of post procedural adverse events by 12 months.

Key findings from the study are as follows:

- 100% procedural success in implanting CGuard EPS;
- 1 death from hemorrhagic stroke (patient was admitted for immediate treatment of CAS due to stroke), 2 minor strokes, 6 TIAs and one nonfatal AMI at 24 hours;
- 1 minor stroke, 2 TIAs, three AMIs, no deaths and no stent thrombosis/occlusions between 24 hours and 30 days; and
- 1 minor stroke, 4 TIAs, 2 AMIs and 8 deaths (the 2 mentioned AMIs, 4 malignancies, 1 suicide and 1 undefined complication in Guillain-Barré Syndrome) between 30 days and 1 year.

Thirty-Day Results of the Novel CGuard-Covered Stent in Patients Undergoing Carotid Artery Stenting

“Thirty-Day Results of the Novel CGuard-Covered Stent in Patients Undergoing Carotid Artery Stenting” was an investigator-led, prospective single-center study which evaluated CGuard EPS in 103 patients that underwent carotid artery stenting procedures. The aim of the study was to provide early-term evaluation, safety, and efficacy of the novel CGuard micromesh self-expanding stent with embolic protection system (EPS). In April 2021, the 30-day positive results were published in the Journal of Endovascular Therapy, DOI: 10.1177/15266028211007466.

Key findings from the study are as follows:

- 100% technical success was achieved in all patients:
- No major adverse events (death, stroke, or myocardial infarction) at 30 days.

The SIBERIA Trial for Carotid Artery Stenosis: A Randomized Controlled Trial of Conventional Versus Micronet™-Covered Stent Use in Percutaneous Neuroprotected Carotid Artery Revascularization: Peri-procedural and 30-day Diffusion-Weighted Magnetic Resonance Imaging and Clinical Outcomes (RCT trial)

“The SIBERIA Trial for Carotid Artery Stenosis: A Randomized Controlled Trial of Conventional Versus Micronet™-Covered Stent Use in Percutaneous Neuroprotected Carotid Artery Revascularization: Peri-procedural and 30-day Diffusion-Weighted Magnetic Resonance Imaging and Clinical Outcomes” was an investigator-initiated randomized clinical trial, single-center study, which evaluated one hundred patients who qualified for carotid revascularization with high risk for surgery and were randomized 1:1 to either CGuard EPS or Acculink™. The primary endpoints were incidence and volume of new cerebral embolic post-procedural lesions (24-48 hours) as determined by diffusion weighted magnetic resonance imaging (DW-MRI). The principal secondary endpoints included incidence of periprocedural or postprocedural stroke, myocardial infarction and death at 30 days. The 30-day results of the study were presented in a late-breaking session at the EuroPCR in June 2020 and published (Randomized Controlled Trial of Conventional Versus MicroNet-Covered Stent in Carotid Artery Revascularization, JACC Cardiovascular Interventions, Vol. 14, November 21, 2021). The conclusion of the study was that the CGuard™ Micronet™-covered stent use in consecutive unselected patients subjected to neuroprotected carotid artery stenting was associated with a greater than three-fold reduction in the procedure-generated mean cerebral lesion volume, and with zero post-procedural cerebral embolisms observed. The MicroNet covered stent significantly reduced periprocedural and abolished post procedural cerebral embolism in relation to a conventional carotid stent. This is consistent with the MicroNet covered stent’s sustained embolism prevention, translating into cerebral protection not only during but after carotid artery stenting. The incidence of restenosis and vessel occlusion according to the ICA (internal carotid artery) ultrasound and the incidence of strokes, myocardial infarctions or deaths between the study arms at 365 days were presented at the LINC conference in Leipzig, Germany in June, 2022. The 12-month outcomes demonstrated a significantly higher prevalence of the combined endpoint of death, stroke or myocardial infarctions and in-stent restenosis and vessel occlusion rate in the first generation (single layer) carotid stent, Acculink™, versus the MicroNet-Covered Stent, CGuard™.

Key findings from the study are as follows:

- Peri Procedure, the CGuard™ arm was observed to have a 57% reduction in new cerebral lesion average volume per patient (171 mm³ vs. 73 mm³), a statistically significant improvement (p=0.017) and 222 mm³ vs. 84 mm³ (p=0.038);
- Post Procedure (24-48 hours), the CGuard™ arm was observed to have a 78% reduction in the average volume of new cerebral lesions (157 mm³ vs. 700 mm³), a statistically significant improvement (p=0.007);
- At 30 days, DW-MRI showed zero new cerebral lessons in the CGuard™ arm versus six in the Acculink™ arm (p=0.03);
- At 30 days, there were zero strokes, myocardial infarctions or deaths in the CGuard arm and two events the Acculink™ arm (two strokes);
- At 365 there were zero cases of restenosis and vessel occlusion in the CGuard™ arm versus 3 cases of restenosis and 1 case of vessel occlusion in the Acculink™ arm;
- At 365 days, there were one event in the CGuard arm (one death) and five events the Acculink™ arm (two strokes, two deaths and one myocardial infarction).

On-going and Planned Clinical Trials

C-GUARDIANS

C-GUARDIANS is a prospective, multicenter, single-arm, pivotal study to evaluate the safety and efficacy of the CGuard Carotid Stent System when used to treat symptomatic and asymptomatic carotid artery stenosis in patients undergoing carotid artery stenting.

The study completed enrollment in June 2023. The primary endpoint is a composite of: (1) incidence of major adverse events including Death (all-cause mortality), any Stroke, and Myocardial Infarction (DSMI) through 30-days post index procedure, or (2) ipsilateral stroke from day 31 to day 365 post-procedure. All events are adjudicated by an independent clinical events committee. The composite index will be compared to a performance goal based on the observed rate of the two components of the primary endpoint from previous pivotal stent trials which are considered industry standard. The performance goal will be considered met if the upper bound of the two-sided 95% confidence interval calculated from the observed primary endpoint rate is < 11.6% and the p-value is less than 0.025.

From July 2021 to June 2023, 316 patients were prospectively enrolled at 24 sites in the US and the EU and from April 2023 included deployment of the CGuard stent using CGuard Prime, our next generation CAS stent platform. All CAS procedures were performed utilizing the CGuard MicroNet™ mesh covered stent and cleared intra-procedural cerebral protection distal embolic filters or proximal embolic protection with flow cessation, or both. At 30 days, the hierarchical DSMI rate was 0.95% in the intent to treat (ITT) analysis and 0.63% in the per- protocol (PP) analysis. Three patients experienced major adverse cardiovascular events by 30-days: one patient who did not take dual antiplatelet therapy (protocol violation) had a major stroke and died and two other patients had a stroke. There was no myocardial infarction (MI). These results support a potential “neuroprotective” effect of the CGuard stent from the procedure to 30 days follow-up.

On May 28, 2024, we announced positive one-year follow up results from the C-GUARDIANS trial of the CGuard™ Carotid Stent System in which stenting with the CGuard Carotid Stent System in patients with carotid artery stenosis and at high risk for carotid endarterectomy had a 30-day DSMI and Ipsilateral stroke between 31 and 365 days rate of 1.95%, measured from procedure to 1-year follow-up in the ITT analysis, using Kaplan-Meier method. The primary endpoint rate was 1.71% in the per-protocol population.

On September 16, 2024, we submitted the clinical module of the PMA, which is currently under interactive review with the FDA.

Early Feasibility Study of CGuard EPS for Acute Stroke Patients with Tandem Lesions

In November 2023, we announced the entry into a strategic agreement with the Jacobs Institute at the State University of New York at Buffalo to execute an early feasibility study of CGuard Carotid Stent System for the treatment of acute stroke patients with tandem lesions. The study, a prospective, single center, single-arm, open label, non-blinded study is expected to enroll 15 acute stroke patients across three U.S. sites to assess the safety and feasibility of using CGuard Carotid Stent System to treat acute ischemic stroke patients with tandem lesions. Dr. Adnan Siddiqui, Vice-Chairman and Professor of Neurosurgery at the State University of New York at Buffalo, CEO of the Jacobs Institute, is the Principal Investigator for the study. We began enrollment in the first quarter of 2025.

CGUARDIANS II for TCAR procedures

On October 3, 2024, FDA approved our IDE for CGUARDIANS II, a multicenter, single-arm, pivotal study to evaluate the safety and efficacy of the CGuard Prime 80cm carotid stent system used in conjunction with the ENROUTE NPS during Transcarotid Artery Revascularization (TCAR) procedure. Patrick Geraghty, M.D., professor of surgery and radiology, section of vascular surgery at Washington University School of Medicine in St. Louis, MO, and Patrick Muck, M.D., program director and chief of vascular surgery at Good Samaritan Hospital in Cincinnati, OH, are lead principal investigators for the trial. The study enrolled its first patient on December 16, 2024 and aims to enroll a minimum of 50 evaluable patients.

CGUARDIANS III for TCAR procedures using SwitchGuard NPS

The SwitchGuard™ NPS is designed to allow the treating physician to reverse cerebral blood flow during a TCAR procedure. SwitchGuard™ is intended to prevent embolic debris generated during the procedure from traveling to the brain, passing the blood through the filter before returning it to the patient to minimize blood loss.

On December 30, 2024, we submitted an IDE to the FDA for CGUARDIANS III, a multicenter, single-arm, pivotal study to evaluate the safety and efficacy of the SwitchGuard NPS used in conjunction with the CGuard Prime 80cm Carotid Stent System for providing cerebral embolic protection during carotid artery stenting via the Transcarotid Artery Revascularization (TCAR) approach. The IDE submission is currently under review at the FDA.

Growth Strategy

Our primary business objective is to utilize our proprietary MicroNet technology and products to become the industry standard for the treatment of carotid disease and prevention of stroke and to provide a superior solution to the common acute problems caused by current stenting procedures, such as restenosis, embolization and thrombosis. We are pursuing the following business strategies to achieve these objectives.

- **Grow our presence in existing and new markets for CGuard EPS.** We are focused on growing our presence in the U.S. market through a direct sales organization, pending FDA approval of CGuard Prime and to this end have been building the infrastructure for U.S. commercial operations. In addition, we have launched CGuard EPS in most European and Latin American countries through a comprehensive distributor sales organizations network. We are continuing to focus on larger growing markets through this network by supporting our distributors with robust marketing and clinical education programs. We are pursuing additional product registrations and distribution contracts with local distributors in other countries in Europe, Asia and Latin America. In February 2021, we executed a distribution agreement with Chinese partners for the purpose of expanding our presence in China. Currently, we are seeking strategic partners for a potential launch of CGuard EPS in Asian countries.
- **Widen the adoption of CGuard.** We are seeking to expand the population of CGuard patients in those countries in which CGuard is commercially available. In particular, our focus is on establishing CGuard as a viable alternative (in appropriate cases) to carotid endarterectomy and the use of conventional carotid stents within the applicable medical communities. We intend to accomplish this goal by continuing to publish and present our clinical data, supporting investigator-initiated clinical registries and exploring the addition of additional devices to our portfolio, including the SwitchGuard NPS for use in TCAR cases. We have partnered and will continue to seek out partnerships with organizations focused on the treatment of stroke. We will also continue to engage advisory boards and to develop a network of key opinion leaders to assist us in our efforts to widen the adoption of CGuard.

- **Portfolio expansion and pipeline development** We plan to continue to invest in advancing our portfolio with new delivery system alternatives to facilitate the use of CGuard and SwitchGuard by all physicians. We believe our delivery systems, if approved, will enable all endovascular access points including accessory devices for trans carotid artery revascularization.
- **CMS approval of National Coverage Determination (NCD)** – On October 11 2023, CMS issued an NCD covering the use of carotid stents (both CAS and TCAR) for the treatment of both symptomatic and asymptomatic patients either at high- or standard-surgical risk. This decision significantly increases the available market to endovascular procedures. Previously, only symptomatic patients at high-risk to surgery were covered through the CMS coverage, NCA - Percutaneous Transluminal Angioplasty (PTA) of the Carotid Artery Concurrent with Stenting (CAG-00085R8) - Tracking Sheet (cms.gov)
- **Continue to leverage our MicroNet technology to develop additional applications for interventional cardiologists and vascular surgeons.** In addition to the applications described above, we believe that we will eventually be able to utilize our proprietary MicroNet technology to address imminent market needs for new product innovations to significantly improve patient care. We continue to broadly develop and protect intellectual property using our mesh technology. Examples of some areas include peripheral vascular disease and neurovascular disease.
- **Establish relationships with collaborative and development partners to fully develop and market our existing and future products.** We are seeking strategic partners for collaborative research, development, marketing, distribution, or other agreements, which could assist with our development and commercialization efforts for CGuard and other potential products that are based on our MicroNet technology.

Competition

The markets in which we compete are highly competitive, subject to change and impacted by new product introductions and other activities of industry participants.

Carotid

With respect to competition for our carotid embolic prevention system, CGuard EPS, the manufacturers of products used in connection with CAS procedures include a number of large companies, such as Abbott Laboratories, Boston Scientific Corporation, Medtronic, Cordis Corporation and Terumo Medical Corporation.

Many of these competitors are larger companies or divisions of publicly traded companies that have certain competitive advantages, including greater capital resources, larger customer bases, broader product lines, larger sales forces, greater marketing and management resources, larger research and development staffs and larger facilities than ours and have established reputations, relationships with our target customers and worldwide distribution methods that are more effective than ours. However, while there are currently many market participants in the U.S. carotid stent market, we believe that the European market is somewhat more fragmented for CAS products, and, in our opinion, smaller competitors may be able to gain market share with greater flexibility and more efficiency than in the United States.

We believe the principal competitive factors in our market include the following:

- Strength of clinical evidence- patient outcomes and adverse event rates
- Scale and effectiveness of commercialization efforts/organizations
- Acceptance by treating physicians and referral sources
- Physician learning curve
- Ease-of-use and reliability
- Economic benefits and cost savings
- Availability of reimbursement
- Patient experience

Sales and Marketing

Sales and Marketing

In October 2024, we established our global headquarters in Miami, Florida to support the anticipated U.S. launch and commercialization of the CGuard Prime carotid stent system. During 2024, we started the build-out of the infrastructure for commercial operations in the U.S. designed to support the anticipated commercialization of the CGuard Prime carotid stent system.

We are designing our commercial strategy and building our direct sales force to drive CGuard Prime penetration within the community of interventionalists. In parallel, we aim at transitioning vascular surgeons from carotid endarterectomy procedures to CAS and TCAR with CGuard and accessory devices, which we believe can greatly expand our customer base. We plan to continue to focus our marketing efforts on key growth markets and to evaluate opportunities in new territories as they become available. In addition, we are using international medical conferences to gain market exposure and brand recognition. We continue to work with leading physicians to enhance our marketing efforts and are developing relationships with new key opinion leaders to champion our technology and work with us in clinical studies.

In the United States, we plan to market and sell the CGuard Prime carotid stent system through a direct sales organization consisting of 15 sales and clinical support personnel, as of March 12, 2025. Our sales professionals have substantial experience launching and establishing new disruptive therapies and converting open surgical procedures to minimally-invasive alternatives. We are continuing to expand our commercialization capabilities and to build our distribution capabilities to support the anticipated commercialization of the CGuard Prime carotid stent system. At this time, we do not have any commercially approved medical devices in the US, and we have not registered as an establishment with the FDA.

Previously, based on the positive CGuard EPS clinical data, we initiated the commercial launch of CGuard EPS in CE marked countries in early 2015. In September 2015, we announced full market launch of CGuard EPS in Europe. Since 2017 we have focused on sales of our products through local distribution partners and our own internal sales initiatives to gain greater reach into all the relevant clinical specialties and to expand our geographic coverage.

Product Positioning

We believe that CGuard has the potential to become the standard of care in treating carotid artery disease. It is a second-generation stent with positive patient outcomes demonstrating significant reduction in post-procedural neurological events.

Additionally, we intend to continue to evaluate potential product and manufacturing enhancements for CGuard expected to reduce cost of goods or provide the best-in-class performing delivery system and accessory solutions. We believe these improvements may allow us to reduce cost of goods and increase penetration in our existing geographies and better position us for entry into new markets.

Insurance Reimbursement

While most countries have established reimbursement codes for stenting procedures, certain countries may require additional clinical data before recognizing coverage and/or to obtain a certain level of reimbursement for one or more of our products. In these situations, we intend to complete the required clinical studies to obtain reimbursement approval in countries where it makes economic sense to do so.

In October 2023, CMS issued its final National Coverage Determination (“NCD”), expanding coverage of both CAS and TCAR to include both asymptomatic and standard risk patients, significantly expanding the U.S. addressable market.

Intellectual Property

Patents

We have 66 issued patents, including 20 patents issued in the U.S., and 27 pending patent applications, 6 of which are pending in the United States. Many of these patents and applications cover aspects of our CGuard and MGuard technology. Patents outside the U.S. have been filed in Canada, China, Europe, Israel, India, Japan, Australia, and South Africa. The patents and applications fall into a number of patent families, as listed below:

Base Title of Patent Family	Pending patent applications (Countries)	Issued patents (Country and Patent No.)	Issue Date
Bifurcated stent assemblies		USA 8,961,586	24-Feb-2015

The patents and patent applications listed above cover various aspects of our products, specifically focusing on the mesh sleeve covering our stents, as well as methods for production and delivery mechanisms of the stents. We believe that our patents, in particular those covering the use of a knitted micron-level mesh sleeve over a stent for various indications, as well as our pending patent applications (if issued as patents with claims substantially in their present form), create a significant barrier against other companies seeking to use similar technology. We believe these patents and patent applications collectively cover all our existing products and may be useful in protecting our future technological developments. We intend to aggressively continue patenting new technologies and to actively pursue any infringement of our key patents.

Trade Secrets

We also rely on trade secret protection to protect our interests in proprietary know-how and/or for processes for which patents are difficult to obtain or enforce. As part of our trade secret policy, we rely on non-disclosure and confidentiality agreements with employees, consultants and other parties to protect trade secrets and other proprietary technology.

Trademarks

We have registered or applied to register the following trademarks, which we use in connection with our products:

- InspireMD® (US, European Union, and UK)
- MGuard® (European Union, and UK)
- CGuard® (US, European Union, and UK)
- MGuard Prime® (European Union, and UK)
- NGuard® (European Union and UK)
- PVGuard® (European Union, and UK)
- Micronet® (US)
- (MNP Micronet Protection logo) (European Union and UK)
- Carenet® (European Union and UK)
- SmartFit™ (US, UK, EP and CN)
- SmartFit Logo (EP, UK, CN)
- CGuard Prime (EP, UK, US, CN, JP)
- SwitchGuard (EP, UK, US, JP)
- True North Medical (EP, UK)
- MicroMesh logo (EP, UK)
- Micronet logo (updated version) (US, EP, UK, JP)

The trademarks are renewable indefinitely, so long as we continue using the marks and make the appropriate filings when required. We also use and may have common-law rights to various trademarks, trade names, and service marks.

Government Regulation

The manufacture and sale of our products are subject to regulation by numerous governmental authorities, principally the European Union CE mark and other corresponding foreign agencies.

Sales of medical devices outside the United States are subject to foreign regulatory requirements that vary widely from country to country. These laws and regulations range from simple product registration requirements in some countries to complex approval process, clinical trials and production controls in others. As a result, the processes and time periods required to obtain foreign marketing approval may be longer or shorter than those necessary to obtain FDA market authorization. These differences may affect the timeliness of international market introduction of our products. For the European Union nations, medical devices must obtain a CE mark before they may be placed on the market. In order to obtain and maintain the CE mark, we must comply with EU law on medical devices, which, until May 26, 2021 was governed by the MDD, by presenting comprehensive technical files for our products demonstrating safety and efficacy of the product to be placed on the market and passing initial and annual quality management system audit as per ISO 13485 standard by a European Notified Body. We have obtained ISO 13485 quality system certification and CGuard EPS that we currently distribute into the European Union, displays the required CE mark. In order to maintain certification, we are required to pass an annual surveillance audit conducted by Notified Body auditors. The European Union replaced the MDD with the new MDR regulation. The MDR entered into force after a transitional period of three years and a one year extension of that transition period due to the COVID-19 pandemic on May 26, 2021 and which changes several aspects of the regulatory framework in the European Union. Manufacturers had the duration of the transition period to update their technical documentation and processes to meet the new requirements in order to obtain a CE Mark. In January 2024, we received CE mark recertification of CGuard EPS under the MDR.

We have or had regulatory approval and made sales of CGuard EPS either through distributors pursuant to distribution agreements or directly, in the countries listed in the table below. While each of the European Union member countries accepts the CE mark as its sole requirement for marketing approval, some of these countries still require us to take additional steps in order to gain reimbursement rights for our products. Furthermore, while we believe that certain of the below-listed countries that are not members of the European Union and accept the CE mark as a primary requirement for marketing approval, each such country requires additional regulatory requirements for final marketing approval of our products. Furthermore, we are currently targeting additional countries in Europe, Asia, and Latin America; however, even if all governmental regulatory requirements are satisfied in each such country, we anticipate that obtaining marketing approval in each country could take as few as three months or as many as twelve months or more, due to the nature of the approval process in each individual country, including typical wait times for application processing and review, as discussed in greater detail below.

Please refer to the table below setting forth the approvals and sales made for CGuard EPS on a country-by-country basis

FDA Government Regulation of Medical Devices for Human Subjects

Many of our activities are subject to regulatory requirements by the FDA under provisions of the Federal Food, Drug, and Cosmetic Act and regulations and guidance thereunder, including requirements governing the development, marketing, labeling, promotional efforts, manufacturing, and exporting of medical devices.

FDA Approval/Clearance Requirements

In the United States, most Class II or III medical devices must be cleared or approved by the FDA prior to commercialization. Unless an exemption applies, each medical device that is marketed in the United States must receive either 510(k) clearance or PMA approval. Medical devices that are class II devices generally receive 510(k) clearance are “cleared” by the FDA to market, distribute, and sell in the United States. Medical devices that are class III devices obtain a premarket approval by the FDA are “approved” to market, distribute, and sell in the United States.

Class I devices are those for which safety and effectiveness can be assured by adherence to the FDA’s general regulatory controls for medical devices, or the General Controls, which include compliance with the applicable portions of the FDA’s quality system regulations, facility registration and product listing, reporting of adverse medical events, and appropriate, truthful and non-misleading labeling, advertising, and promotional materials. Some Class I devices also require premarket clearance by the FDA through the 510(k)-process described below.

Class II devices are generally required to file a Premarket review, known as a 510(k) application, that may also require General Controls, and any other special controls as deemed necessary by the FDA to ensure the safety and effectiveness of the device. Generally, the 510(k) submission is generally considered “substantially equivalent to a previously marketed device. Pursuant to the Medical Device User Fee and Modernization Act of 2002 (MDUFMA), as of October 2002, unless a specific exemption applies, 510(k) submissions are subject to user fees. Certain Class II devices are exempt from this premarket review process.

Class III devices generally are more complex devices or new devices where there is no substantially equivalent device on the market and can have the greatest risk. Devices in this class must demonstrate safety and efficacy requirements and file a premarket filing reviewed by the FDA. In addition, Class III devices cannot generally be marketed until they receive FDA approval. The safety and effectiveness of Class III devices cannot be assured solely by the General Controls and the other requirements described above. These devices generally require formal clinical studies to demonstrate safety and effectiveness. Under MDUFMA, PMAs (and supplemental PMAs) are subject to significantly higher user fees than 510(k) applications, and they also require considerably more time and resources.

The FDA establishes requirements whether a device must undergo either the 510(k) clearance or premarket approval based on statutory criteria that utilize a risk-based classification system. Premarket approval (PMA) is the FDA process of scientific and regulatory review to evaluate the safety and effectiveness of Class III medical devices and, such reviews may also be done for Class II medical devices. Class III devices are those that support or sustain human life, are of substantial importance in preventing impairment of human health, or which present a potential, unreasonable risk of illness or injury. The FDA uses these criteria to decide whether a premarket approval or a 510(k) is appropriate, including the level of risk that the agency perceives is associated with the device and a determination by the agency of whether the product is a type of device that is similar to devices that are already legally marketed. Devices deemed to pose relatively less risk are placed in either Class I or II. In many cases, the FDA requires the manufacturer to submit a 510(k) requesting clearance (also referred to as a premarket notification), unless an exemption applies. The 510(k) must demonstrate that the manufacturer's proposed device is "substantially equivalent" in intended use and in safety and effectiveness to a legally marketed predicate device. A "predicate device" is a pre-existing medical device to which equivalence can be drawn, generally by a Class II device that was in commercial distribution before May 28, 1976, for which the FDA has not yet called for submission of a PMA. A product that lacks a predicate device may default to a Class III device, although a company may seek to submit a De Novo classification request, rather than a PMA. The De Novo request allows a regulatory pathway to classify novel medical devices for which no predicate device exists, and FDA will determine which category is appropriate for that device and for which general controls alone, or general and special controls, provide reasonable occurrence of safety and effectiveness for the intended use, but for which there is no legally marketed predicate device.

Premarket Approval Pathway

The CGuard Carotid Stent System is classified as a Class III medical device (considered a PMA) by the FDA. Class III medical devices are generally the highest risk devices and are subject to more rigorous regulatory requirements by the FDA, since the FDA process of premarket approval involves scientific and regulatory review to evaluate the safety and effectiveness of Class III medical devices for the purpose(s) intended. The FDA will either approve or deny a premarket approval application and we cannot market a device until the FDA approves a premarket approval application.

A PMA must be supported by extensive data including, but not limited to, analytical, preclinical, clinical trials, manufacturing, statutory preapproval inspections, and labeling to demonstrate to the FDA's satisfaction the safety and effectiveness of the device is safe and effective for its intended use. Before a premarket approval application is submitted, a manufacturer must generally apply for an Investigational Device Exemption (IDE) to conduct clinical trials. If the device presents a "significant risk," as defined by the FDA, to human health, the FDA requires the device sponsor to file an IDE application with the FDA and obtain IDE approval prior to initiation of broader human clinical trials.

Part of the PMA process is to ensure that the IDE is the first application that must be supported by appropriate data, such as analytical, animal and laboratory testing results, manufacturing information, and an Investigational Review Board (IRB) approved protocol showing that it is safe to test the device in humans and that the testing protocol is scientifically sound, as well as ensuring patient informed consent is obtained.

A clinical trial may be suspended by either the FDA or the IRB at any time for various reasons, including a belief that the risks to the study participants outweigh the benefits of participation in the study. Even if a study is completed, clinical testing results may not demonstrate the safety and efficacy of the device, or they may be equivocal or otherwise insufficient to obtain approval of the product being tested. After the clinical trials have been completed, if at all, and the clinical trial data and results are collected and organized, a manufacturer may complete a premarket approval application.

Following the IDE, a PMA application must be prepared and after a PMA is sufficiently complete, then the FDA will accept the application and begin an in-depth review of the submitted information. By statute, the FDA has 180 days to review the “accepted application,” although, generally, FDA review of the application generally takes between one and three years, but it may take significantly longer. During this review period, the FDA may request additional information or clarification of information already provided. Also, during the review period, an advisory panel of experts from outside the FDA may be convened to review and evaluate the application and provide recommendations to the FDA as to the approvability of the device. The preapproval inspections conducted by the FDA include an evaluation of the manufacturing facility to ensure compliance with the Quality Systems Regulations, as well as inspections of the clinical trial sites by the Bioresearch Monitoring group to evaluate compliance with good clinical practice and human subject protections. New premarket approval applications or premarket approval supplements are required for modifications that affect the safety or effectiveness of the device, including, for example, certain types of modifications to the device’s indication for use, manufacturing process, labeling and design. Significant changes to an approved premarket approval require a 180-day supplement, whereas less substantive changes may utilize a 30-day notice, or a 135-day supplement. Premarket approval supplements often require submission of the same type of information as a premarket approval application, except that the supplement is limited to information needed to support any changes from the device covered by the original premarket approval application, and it may not require as extensive clinical data or the convening of an advisory panel.

510(k) Clearance Pathway

We do not currently market, distribute, or sell any products that have market clearance by the FDA under its 510(k) process that are generally required as Class II devices. If, in the future, we develop products where 510(k) clearance is required, we would be required to submit a 510(k) demonstrating that such proposed devices are substantially equivalent to a respective previously cleared 510(k) device or a device that was in commercial distribution before May 28, 1976, for which the FDA has not yet called for the submission of 510(k). The FDA’s 510(k) clearance pathway is established as 180 days for review, however, it usually takes from three to twelve months but could take longer. In some cases, the FDA may require additional information, including clinical data, to make a determination regarding substantial equivalence.

If a device receives 510(k) clearance, any modification that could significantly affect its safety or effectiveness, or that would constitute a new or major change in its intended use, will require a new 510(k) clearance or, depending on the modification, a premarket approval. The FDA requires each device manufacturer to determine whether the proposed change requires submission of a new 510(k) or a premarket approval, but the FDA can review any such decision and can disagree with a manufacturer’s determination. If the FDA disagrees with a manufacturer’s determination, the FDA can require the manufacturer to cease marketing and/or recall the modified device until 510(k) clearance or premarket approval of the modified device is obtained.

Pervasive and Continuing FDA Regulation

A host of regulatory requirements apply to our devices, including the quality system regulation (which requires manufacturers to follow elaborate design, testing, control, documentation and other quality assurance procedures), the Medical Device Reporting regulations (which require that manufacturers report to the FDA specified types of adverse events involving their products), labeling regulations, and the FDA’s general prohibition against promoting products for unapproved or “off-label” uses. Class II devices also can have special controls such as performance standards, post-market surveillance, patient registries, and certain FDA guidelines may also apply to Class I devices.

A noncomprehensive list of the regulatory requirements that apply to our products classified as medical devices include:

- product listing and establishment registration, which helps facilitate FDA inspections and other regulatory action;
- Quality Systems Regulations, which requires manufacturers, including third-party manufacturers, to follow stringent design, testing, control, documentation and other quality assurance procedures during all aspects of the development and manufacturing process;
- labeling regulations and FDA prohibitions against the promotion of products for uncleared, unapproved or off-label use or indication;
- clearance of product modifications that could significantly affect safety or efficacy or that would constitute a major change in intended use of one of our cleared devices (if obtained);
- approval of product modifications that affect the safety or effectiveness of one of our cleared devices (if obtained);
- medical device reporting regulations, which require that manufacturers comply with FDA requirements to report if their device may have caused or contributed to a death or serious injury, or has malfunctioned in a way that would likely cause or contribute to a death or serious injury if the malfunction of the device or a similar device were to recur;
- post-approval restrictions or conditions, including post-approval study commitments;
- post-market surveillance regulations, which apply when necessary to protect the public health or to provide additional safety and effectiveness data for the device;
- the FDA's recall authority, whereby it can ask, or under certain conditions order, device manufacturers to recall from the market a product that is in violation of governing laws and regulations;
- regulations pertaining to voluntary recalls; and,
- notices of corrections or removals.

At this time, we do not have any commercially approved medical devices in the US, and we have not filed for an Establishment Registration with the FDA. If we are approved or cleared to manufacture, prepare, or process a device in the United States, we and any third-party manufacturers that we may use will be required to register our establishments with the FDA. In addition, we and our manufacturing facilities will be subject to FDA inspections for compliance with the FDA's Quality System Regulation. Additionally, some of our subcontractors may also be subject to FDA announced and unannounced inspections for compliance with the FDA's Quality System Regulation and assurances that the Company is marketing appropriately the indications for use of the product. These regulations will require that we manufacture our products and maintain our documents in a prescribed manner with respect to design, manufacturing, testing and quality control activities and ensure that marketing materials and promotion are in compliance. As a medical device manufacturer, we will further be required to comply with FDA requirements regarding the reporting of adverse events associated with the use of our medical devices, as well as product malfunctions that would likely cause or contribute to death or serious injury if the malfunction were to recur. FDA regulations also govern product labeling and prohibit a manufacturer from marketing a medical device for unapproved applications.

U.S. Healthcare Laws and Regulations

In addition to the FDA regulations, there are a variety of other healthcare laws and regulations to which we may be subject if any of our products are marketed, sold, distributed, and/or utilized in the United States. In the United States, we may be subject to the oversight of FDA, Office of the Inspector General within the Department of Health and Human Services (OIG), the Center for Medicare and Medicaid Services (CMS), the Department of Justice (DOJ), in addition to other governmental reviews. We supply products that may be reimbursed by federally funded programs such as Medicare. As a result, our activities may be subject to regulation by CMS and potential enforcement by CMS, OIG and DOJ. Of specific note are federal and state fraud and abuse laws, which prohibit the payment or receipt of kickbacks, bribes or other remuneration, including the offer or solicitation of such payment, intended to induce or reward the purchase, recommendation or generation of business involving healthcare products any item or service payable by a health-care program. Other provisions of federal and state laws prohibit presenting, or causing to be presented, to third party payors (including, government programs, such as Medicare and Medicaid) for reimbursement, claims that are false or fraudulent, or which are for items or services that were not provided as claimed. In addition, other healthcare laws and regulations may apply, such as transparency and reporting requirements and privacy and security requirements. Violations of these laws can lead to civil and criminal penalties, including exclusion from participation in federal and state healthcare programs, any of which could have a material adverse effect on our business. These laws are potentially applicable to manufacturers of products regulated by the FDA as medical devices, such as us, and hospitals, physicians and other institutional or individual providers that may refer or purchase such products. The healthcare laws that may be applicable to our business or operations include, but are not limited to:

- The federal Anti-Kickback Statute, which prohibits a person from knowingly and willfully offering, soliciting or receiving any remuneration, directly or indirectly, overtly or covertly, in cash or in kind, in return for or to induce referring or recommending an individual to another person to receive items or services or to purchase, lease, order, or arrange for any good, facility, item or service payable in whole or in part under a Federal health care program;
- Federal false claims laws and civil monetary penalty laws, including the False Claims Act, prohibit, among other things, individuals or entities from knowingly presenting, or causing to be presented, claims for payment from Medicare, Medicaid or other government healthcare programs that are false or fraudulent, or making a false statement to avoid, decrease or conceal an obligation to pay money to the federal government. The False Claims Act imposes liability on any person or entity that, among other things, knowingly presents, or causes to be presented, a false or fraudulent claim for payment by a federal health care program, knowingly makes, uses or causes to be made or used, a false record or statement material to a false or fraudulent claim, or knowingly makes a false statement to avoid, decrease or conceal an obligation to pay money to the U.S. federal government. The federal Civil Monetary Penalties Law prohibits, among other things, the offering or transferring of remuneration to a Medicare or Medicaid beneficiary that the person knows or should know is likely to influence the beneficiary's selection of a particular supplier of Medicare or Medicaid payable items or services;
- The federal Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), which includes provisions that prohibit knowingly and willfully executing, or attempting to execute, a scheme to defraud any healthcare benefit program or obtain, by means of false or fraudulent pretenses, representations, or promises, any of the money or property owned by, or under the custody or control of, any healthcare benefit program, and for knowingly and willfully falsifying, concealing or covering up a material fact or making any materially false statements in connection with the delivery of or payment for healthcare benefits, items or services;
- HIPAA, as amended by the Health Information Technology for Economic and Clinical Health Act of 2009, and its implementing regulations, including privacy protection that impose obligations and requirements on healthcare providers, health plans, and healthcare clearinghouses as well as their respective business associates that perform certain services for them that involve the use or disclosure of individually identifiable health information, with respect to safeguarding the privacy and security of certain individually identifiable health information;

- The federal transparency requirements under the Affordable Care Act, including the provision commonly referred to as the Open Payments Act or Physician Payments Sunshine Act, which requires certain manufacturers of drugs, devices, biologics and medical supplies that are reimbursable under Medicare, Medicaid or Children’s Health Insurance Program to report annually to Centers for Medicare and Medicaid Services (“CMS”) information related to payments and other transfers of value to physicians and teaching hospitals, and ownership and investment interests held by physicians and their immediate family members; and
- Analogous state and foreign laws and regulations, such as state anti-kickback and false claims laws, which may be broader in scope and apply to referrals and items or services reimbursed by both governmental and non-governmental third-party payors, including private insurers, many of which differ from each other in significant ways and often are not preempted by federal law, thus complicating compliance efforts.

Customers

Our customer base is varied. We currently have distribution agreements for our CE mark-approved CGuard EPS with medical product distributors based in Europe, the Middle East, Asia Pacific and Latin America, and are in discussions with additional potential partners.

Our distribution agreements stipulate that, while we shall assist in training by providing training materials, marketing guidance, marketing materials, and technical guidance, each distributor will be responsible for carrying out local registration, sales and marketing activities. In addition, in most cases, all sales costs, including sales representatives, incentive programs, and other marketing activities, will be borne by the distributor. Under current agreements, distributors purchase stents from us at a fixed price. Our current agreements with distributors are generally for a term of two to three years.

Upon potential PMA approval in the U.S., our direct sales organization will support a varied customer base of multiple interventional and surgical specialties, to include interventional cardiologists, neurologists, neuroradiologists and radiologists, as well as both vascular and neurosurgeons.

Manufacturing and Suppliers

The polymer fiber for MicroNet is supplied by Biogeneral, Inc., a San Diego, California-based specialty polymer manufacturer for medical and engineering applications.

Our catheter supplier for CGuard EPS supplies us with catheters that help create the base for our CGuard EPS stents. Our agreement with the supplier may be terminated by us upon eight months’ notice. On September 17, 2019, we amended the agreement with the supplier so that we are responsible for purchasing and handling inventory of components used in the manufacturing of CGuard EPS catheters, and they are responsible for the manufacturing process.

Our catheter supplier for CGuard Prime supplies us with catheters that help create the base for our CGuard Prime stent system. Our agreement with the supplier which may be terminated by us upon 9 months’ notice, calls for non-binding minimum orders.

We currently manufacture our CGuard EPS and our CGuard Prime at our own facility. The self-expanding bare-metal stents for our CGuard EPS and our CGuard Prime are being manufactured and supplied by a third-party. Our agreement with the supplier for the production of electro polished nitinol bare-metal stents for CGuard EPS and CGuard Prime is priced on a per-stent basis, subject to the quantity of stents ordered. The complete assembly process for CGuard EPS and CGuard Prime, including knitting and securing the sleeve to the stent and the crimping of the sleeved stent into a delivery catheter, is done at our manufacturing site in Israel. Once CGuard EPS and CGuard Prime have been assembled, they are sent for sterilization in a third-party facility in Israel, and then back to our facility for final packaging and distribution.

To support our anticipated production growth following the anticipated commercialization of the CGuard Prime carotid stent system, we have engaged Aptyx Interventional Systems (“Aptyx”) a contract manufacturer that is a developer and manufacturer of complex components and devices for the life sciences, to transfer the manufacturing of CGuard Prime finished goods to full-scale production at their ISO Class 7 cleanroom facility in North Carolina. We previously engaged Medical Murray, another contract manufacturer that specializes in medical device development, prior to Aptyx’s acquisition of Medical Murray’s ISO Class 7 cleanroom facility in North Carolina. Aptyx specializes in complex catheter and implant manufacturing and is FDA-registered and ISO 13485-certified. The transfer includes setting up a production line, conducting process validations, and implementing quality control measures to meet our specifications. Aptyx will also conduct operator training, execute qualification builds, and validate the sterilization process for the CGuard Prime device. We expect this transition to enable increased production capacity to meet future demand, with volume forecasts growing from 20,000 units annually to an estimated 50,000 units by 2027.

CGuard EPS and CGuard Prime consist of a CGuard stent and the delivery system. Each CGuard stent is manufactured from two main components, a self-expanding nickel-titanium stent and the PET polymer mesh. The mesh is made from polyethylene terephthalate (PET). We have patent rights that cover the proposed CGuard stent with mesh. During 2022 our mesh supplier informed us that they will not be able to supply the polymer fiber in the future due to supply issues with the current PET resin, therefore we purchased inventory which should be sufficient to support our production needs until the end of 2027. We are currently testing a different source of PET showing equivalent mechanical properties and biocompatibility of the original raw material. BioGeneral will produce the fiber from the new PET: some samples were already produced with different PET resins for preliminary R&D testing. Once the new resin will be chosen, complete validation process will take up to 18 months. The delivery system of CGuard consists of several sub-assemblies procured from original equipment manufacturers and assembled in-house. In the event that one of our suppliers can no longer supply one of the components, we would need to qualify another supplier, which could take up to a year depending on the component and its criticality. In addition, in order to retain the approval of the CE mark, we are required to perform periodic audits of the quality control systems of our key suppliers in order to ensure that their products meet our predetermined specifications.

Human Capital Management

As of December 31, 2024, we had 86 employees, 85 full-time and one part-time, consisting of six in executive management, six in research and development, nine in quality assurance and compliance, seven in finance and accounting, 34 in operations/production, 14 in commercial (including sales and marketing), three in clinical and seven in human resources, IT and administration. Except for four of our employees in Europe, our employees are not party to any collective bargaining agreements. We do not expect the collective bargaining agreements to which our employees are party to have a material effect on our business or results of operations. We also employ 1 independent contractor in Brazil.

We believe that our future success will depend, in part, on our continued ability to attract, hire and retain qualified personnel. In particular, we depend on the skills, experience and performance of our senior management and research personnel. We compete for qualified personnel with other medical device, biotechnology, pharmaceutical and healthcare companies, as well as universities and non-profit research institutions.

We provide competitive compensation and benefits programs to help meet the needs of our employees. In addition to salaries, these programs (which vary by country/region and employment classification) include incentive compensation plan, pension, healthcare and insurance benefits, paid time off, family leave, and on-site services, among others. We also use targeted equity-based grants with vesting conditions to facilitate retention of personnel, particularly for our key employees.

We consider our relations with our employees to be good.

Item 1A. Risk Factors.

There are numerous and varied risks, known and unknown, that may prevent us from achieving our goals. You should carefully consider the risks described below and the other information included in this Annual Report on Form 10-K, including the consolidated financial statements and related notes. If any of the following risks, or any other risks not described below, actually occur, it is likely that our business, financial condition, and/or operating results could be materially adversely affected. The risks and uncertainties described below include forward-looking statements and our actual results may differ from those discussed in these forward-looking statements.

Summary Risk Factors

Our business is subject to numerous risks and uncertainties, including those highlighted in the section titled “Risk Factors” immediately following this prospectus summary. These risks include, among others, the following:

- we have a history of net losses and may experience future losses;
- our history of recurring losses and negative cash flows from operating activities, significant future commitments and the uncertainty regarding the adequacy of our liquidity to pursue our complete business objectives, and substantial doubt regarding our ability to continue as a going concern;
- we will need to raise additional capital to meet our business requirements in the future, and such capital raising may be costly or difficult to obtain and could dilute our stockholders’ ownership interests;
- we may become subject to claims by much larger and better capitalized competitors enforcing their intellectual property rights against us or seeking to invalidate our intellectual property or our rights thereto;
- completing clinical trials for CGuard Carotid Stent System and SwitchGuard NPS in the United States require meeting a number of regulatory requirements and must be conducted in compliance with the FDA’s IDE regulations. Failure to maintain compliance with IDE regulations could have a material adverse effect on our business;
- clinical trials necessary to support a pre-market approval application will be lengthy and expensive and will require the enrollment of a large number of patients, and suitable patients may be difficult to identify and recruit. Any such delay or failure of clinical trials could prevent us from commercializing our stent products, which would materially and adversely affect our results of operations and the value of our business;
- the results of our clinical trials may be insufficient to obtain regulatory approval for our products;
- our products may in the future be subject to product notifications, recalls, or voluntary market withdrawals that could harm our reputation, business and financial results;
- we may be subject, directly or indirectly, to applicable U.S. federal and state anti-kickback, false claims laws, physician payment transparency laws, fraud and abuse laws or similar healthcare and security laws and regulations, which could expose us to criminal sanctions, civil penalties, contractual damages, reputational harm and diminished profits and future earnings;
- we may be exposed to product liability claims and insurance may not be sufficient to cover these claims;
- even if one or more of our products are approved by the FDA, we may fail to obtain an adequate level of reimbursement for our products by third party payors, such that there may be no commercially viable markets for our products or the markets may be much smaller than expected;

- in the United States and European Union, our business could be significantly and adversely affected by healthcare reform initiatives and/or other legislation or judicial interpretations of existing or future healthcare laws and/or regulations;
- if we are unable to obtain and maintain intellectual property protection covering our products, others may be able to make, use or sell our products, which would adversely affect our revenue;
- we are an international business, and we are exposed to various global and local risks that could have a material adverse effect on our financial condition and results of operations venue;
- our business, operating results and growth rates may be adversely affected by current or future unfavorable economic and market conditions and adverse developments with respect to financial institutions and associated liquidity risk;
- there are inherent limitations in all control systems, and misstatements due to error or fraud may occur and not be detected;
- we anticipate being subject to fluctuations in currency exchange rates because we expect a substantial portion of our revenues will be generated in Euros and U.S. dollars, while a significant portion of our expenses will be incurred in New Israeli Shekels;
- if there are significant shifts in the political, economic and military conditions in Israel and its neighbours, it could have a material adverse effect on our business relationships and profitability;
- it may be difficult for investors in the United States to enforce any judgments obtained against us or some of our directors or officers;
- the market prices of our common stock and our publicly traded warrants are subject to fluctuation and have been and may continue to be volatile, which could result in substantial losses for investors; and
- our common stock could be delisted from the Nasdaq Stock Market if we fail to meet its continued listing requirements, including requirements with respect to the market value of publicly-held-shares, market value of listed shares, minimum bid price per share, and minimum stockholder's equity, among others, and requirements relating to board and committee independence.

Risks Related to Our Financial Condition

We have a history of net losses and may experience future losses.

We have yet to establish any history of profitable operations. We reported a net loss of \$32.0 million for the fiscal year ended December 31, 2024, and had a net loss of approximately \$19.9 million during the fiscal year ended December 31, 2023. As of December 31, 2024, we had an accumulated deficit of \$254 million. We expect to incur additional operating losses for the foreseeable future. There can be no assurance that we will be able to achieve sufficient revenues throughout the year or be profitable in the future.

Management has concluded that there is substantial doubt about our ability to continue as a going concern, and the report of our independent registered public accounting firm contains an explanatory paragraph as to our ability to continue as a going concern, which could prevent us from obtaining new financing on reasonable terms or at all.

Because we have had recurring losses and negative cash flows from operating activities, substantial doubt exists regarding our ability to remain as a going concern at the same level at which we are currently performing. Accordingly, the report of Kesselman & Kesselman, our independent registered public accounting firm, with respect to our financial statements for the year ended December 31, 2024, includes an explanatory paragraph as to our potential inability to continue as a going concern. The doubts regarding our potential ability to continue as a going concern may adversely affect our ability to obtain new financing on reasonable terms or at all.

We will need to raise additional capital to meet our business requirements in the future, and such capital raising may be costly or difficult to obtain and could dilute our stockholders' ownership interests.

In order for us to pursue our business objectives without materially curtailing our operations, we will need to raise additional capital, which additional capital may not be available on reasonable terms or at all. For instance, we will need to raise additional funds to accomplish the following:

- commercialization efforts in the United States following anticipated FDA approval of CGuard™ Prime;
- expansion of manufacturing and operational capabilities, including scaling up production to meet expected demand and establishing necessary infrastructure in the United States;
- development of our current and future products, including potential enhancements to CGuard™ Prime and advancing SwitchGuard™ NPS;
- pursuing growth opportunities, such as expanding commercial activities in key international markets and strengthening regional distribution networks;
- growing our U.S. commercial organization, including hiring and retaining qualified personnel to support sales, marketing, and operations;
- responding to competitive pressures and evolving market dynamics, including potential reimbursement challenges and pricing pressures;
- meeting regulatory and compliance obligations, including post-market surveillance, product registrations, and adherence to evolving regulatory frameworks; and
- maintaining compliance with applicable laws and corporate governance requirements.

In May 2023, we issued four series of Warrants that expire upon the earlier of five years and 20 trading days following the occurrence of certain milestones specific to each series. If the Warrants are exercised in cash in full, this would result in \$71.4 million of gross proceeds. In July 2024, we received gross proceeds of approximately \$17.9 million following the exercise of the Series H Warrants in full. There can be no assurance that we will achieve any of the milestones set forth in the Warrants or that the Warrants will be exercised in cash in full.

Any additional capital raised through the sale of equity or equity-backed securities may dilute our stockholders' ownership percentages and could also result in a decrease in the market value of our equity securities.

The terms of any securities issued by us in future capital transactions may be more favorable to new investors, and may include preferences, superior voting rights and the issuance of warrants or other derivative securities, which may have a further dilutive effect on the holders of any of our securities then outstanding.

In addition, we may incur substantial costs in pursuing future capital financing, including investment banking fees, legal fees, accounting fees, securities law compliance fees, printing and distribution expenses and other costs. We may also be required to recognize non-cash expenses in connection with certain securities we issue, such as convertible notes and warrants, which may adversely impact our financial condition.

Risk Related to Commercialization of Our Products

While we derive most of our revenue from the sale of CGuard EPS in CE marked countries, our ability to generate significant revenues and achieve profitability depends, among other things, on our ability to receive FDA approval of CGuard Prime and SwitchGuard and other products we may develop. If we fail to obtain FDA approval for CGuard Prime, SwitchGuard or any other products we may develop, our results of operations and the value of our business would be materially and adversely affected.

We derive most of our revenue from sales of our CGuard EPS in CE marked countries and certain other select jurisdictions. We have not received approvals in the United States and certain other jurisdictions for CGuard Prime and have not received any approvals for SwitchGuard and there can be no assurance that we will be able to receive regulatory approvals to commence marketing and sales for our products in any jurisdiction where we are seeking approvals. Our ability to generate significant revenues and achieve profitability depends on our ability to successfully obtain required regulatory approvals in the U.S. as well as to demonstrate sufficient clinical evidence and manufacture commercial quantities of our CGuard Prime, SwitchGuard and any other products we may develop at an acceptable cost. In addition, there may be insufficient demand for CGuard Prime, SwitchGuard and any other products we develop. If we fail to generate sufficient revenues from these products, our results of operations and the value of our business and securities would be materially and adversely affected.

The future success of our business cannot be determined at this time, and we do not anticipate generating significant revenues from product sales for the foreseeable future. In addition, we have no experience in commercializing our CGuard Prime or any other product we develop on a mass scale and face a number of challenges with respect to our commercialization efforts, including, among others, that:

- we may not have adequate financial or other resources to demonstrate adequate clinical results, attain required regulatory approvals and licensures, and begin the commercialization efforts for our CGuard Prime, SwitchGuard or any other product we develop in our target markets;
- we may fail to obtain or maintain required regulatory approvals and licensures for our CGuard Prime, SwitchGuard or any other product we develop in our target markets or may face adverse regulatory or legal actions relating to our products even if regulatory approval is obtained;
- we may not demonstrate adequate clinical safety and clinical effectiveness results from our CGuard Prime, SwitchGuard or any other product we develop to support regulatory body approval or market acceptance and adoption;
- we may not be able to scale up the manufacture of our CGuard Prime, SwitchGuard or any other product we develop to commercial quantities at an adequate quality or at an acceptable cost;
- we may not be able to establish adequate sales, marketing and distribution channels;
- healthcare professionals and patients may not accept our CGuard Prime, SwitchGuard or any other product we develop;
- other technological challenges may reduce the demand for our CGuard Prime, SwitchGuard or any other product we develop;
- new alliances between existing market participants and the entrance of new market participants may interfere with our market penetration efforts;
- government and private third-party payors may not agree to provide coding, coverage and payment adequate to reimburse healthcare providers and patients for any or all of the purchase price of CGuard Prime, SwitchGuard or any other product we develop which may adversely affect healthcare providers' and patients' willingness to purchase our C-Scan system;
- uncertainty as to market demand may result in inefficient pricing of our CGuard Prime, SwitchGuard or any other product we develop;
- we may not be able to adequately protect our intellectual property or may face third-party claims of intellectual property infringement; and
- we are dependent upon the results of ongoing clinical studies relating to our CGuard Prime and the products of our competitors.

If we are unable to meet any one or more of these challenges successfully, our ability to effectively commercialize CGuard Prime, SwitchGuard or any other product we develop could be limited, which in turn could have a material adverse effect on our business, financial condition and results of operations.

Although we met the primary endpoint in our C-GUARDIANS trial of the CGuard Carotid Stent System, the results may not be sufficient to support FDA approval.

In June 2023, we completed enrollment in the C-GUARDIANS trial. In November 2023, we announced positive 30-day follow up results from the C-GUARDIANS trial in which stenting with the CGuard Carotid Stent System in patients with carotid artery stenosis. In May 2024, we announced positive one-year follow up results from the C-GUARDIANS trial, with a rate of 30-day DSMI and ipsilateral stroke between 31 and 365 days of 1.95%. These data were used to support the PMA submission in September 2024 with a view to potential FDA approval of the CGuard Prime carotid stent system in the first half of 2025. There can be no assurance that the primary endpoint results will be sufficient to support FDA approval. In addition, our clinical trials have been conducted under differing protocols, while using specific inclusion criteria and we cannot assure you that its actual clinical performances will be satisfactory to support proposed indications and regulatory approvals and clinical acceptance and adoption, or that its use will not result in unanticipated complications. Furthermore, the results of our clinical trials are subject to human analyses and interpretation of the data accumulated, which could be affected by various errors due to, among others, lack of sufficient clinical experience with CGuard EPS, SwitchGuard or any other product we develop, assumptions used in the statistical analysis of results, and interpretation errors in the analysis of the clinical trials results. Failure can occur at any time during the clinical trial process. If CGuard EPS, SwitchGuard or any other product we develop does not function as expected over time, we may not achieve regulatory clearances, and may not be widely adopted by healthcare providers and patients.

Even if we obtain regulatory approvals, our products will be subject to ongoing regulatory review and if we fail to comply with continuing U.S. and applicable foreign regulations, we could lose those approvals and our business would be seriously harmed.

Even if products we develop receive regulatory approval or clearance, we will be subject to ongoing reporting obligations, and the products and the manufacturing operations will be subject to continuing regulatory review, including FDA inspections. The outcome of this ongoing review may result in the withdrawal of a product from the market, the interruption of the manufacturing operations and/or the imposition of labeling and/or marketing limitations. Since many more patients are exposed to drugs and medical devices following their marketing approval, serious but infrequent adverse reactions that were not observed in clinical trials may be observed during the commercial marketing of the product. In addition, the manufacturer and the manufacturing facilities we will use to produce any product will be subject to periodic review and inspection by the FDA and other, similar foreign regulators. Later discovery of previously unknown problems with any product, manufacturer or manufacturing process, or failure to comply with regulatory requirements, may result in actions such as:

- restrictions on such product, manufacturer or manufacturing process;
- warning letters from the FDA or other regulatory authorities;
- withdrawal of the product from the market;
- suspension or withdrawal of regulatory approvals;
- refusal to approve pending applications or supplements to approved applications that we submit;
- voluntary or mandatory recall;
- fines;

- refusal to permit the import or export of our products;
- product seizure or detentions;
- injunctions or the imposition of civil or criminal penalties; or
- adverse publicity.

If we, or supplier, third-party contractor, partner or clinical investigator is slow to adapt, or are unable to adapt, to changes in existing regulatory requirements or the adoption of new regulatory requirements or policies, we may lose marketing approval for any of our products, if any of our products are approved, resulting in decreased.

The failure of third parties to meet their contractual, regulatory, and other obligations could adversely affect our business.

We have engaged Aptyx, a contract manufacturer, to transfer the manufacturing of CGuard Prime finished goods to full-scale production at their ISO Class 7 cleanroom facility in North Carolina. Using a third party poses a number of risks, such as: (i) they may not perform to our standards or legal requirements; (ii) they may not produce reliable results; (iii) they may not perform in a timely manner; (iv) they may not maintain confidentiality of our proprietary information; (v) disputes may arise with respect to ownership of rights to technology developed with our partners; and (vi) disagreements could cause delays in, or termination of, the research, development or commercialization of our products or result in litigation or arbitration. Moreover, some third parties are located in markets subject to political and social risk, corruption, violence, infrastructure problems and natural disasters, in addition to country-specific privacy and data security risk given current legal and regulatory environments. Failure of third parties to meet their contractual, regulatory, and other obligations may materially affect our business.

We plan on self-commercializing CGuard Prime in the U.S. if we receive FDA approval and historically have no experience selling, marketing or distributing products in the U.S.

We plan on self-commercializing CGuard Prime in the U.S., subject to receipt of FDA approval. As part of our plan, we are building out a sales, marketing and distribution capabilities and engaged with a contract manufacturer. Historically we have not had experience in manufacturing, selling, marketing or distributing products in the U.S. To be able to commercialize CGuard Prime upon approval, if at all, we must either develop manufacturing, sales, marketing and distribution capabilities, which is expensive and time-consuming, or enter into arrangements with third parties to perform these services.

In October 2024, we established our global headquarters in Miami, Florida to support the anticipated U.S. launch and commercialization of the CGuard Prime carotid stent system. During 2024, we started the build-out of the infrastructure for commercial operations in the U.S. designed to support the anticipated commercialization of the CGuard Prime carotid stent system. In addition, to support our anticipated production growth following the anticipated commercialization of the CGuard Prime carotid stent system, we have engaged Aptyx, a contract manufacturer, to transfer the manufacturing of CGuard Prime finished goods to full-scale production at their ISO Class 7 cleanroom facility in North Carolina.

There are risks involved with establishing our own sales, marketing and distribution capabilities and partnering with a third party manufacturer. We must commit significant financial and managerial resources to develop a marketing and sales force with technical expertise and with supporting distribution capabilities. Factors that may inhibit our efforts to commercialize our products directly and without strategic partners include:

- our inability to recruit and retain adequate numbers of effective manufacturing, sales and marketing personnel;
- the inability of sales personnel to obtain access to or persuade physicians to use our stents;

- the inability to price our products at a sufficient price point to ensure an adequate and attractive level of profitability;
- the difficulty of obtaining reimbursement from governmental and commercial payers;
- the lack of complementary products to be offered by sales personnel, which may put us at a competitive disadvantage relative to companies with more extensive product lines; and
- unforeseen costs and expenses associated with creating and sustaining an independent manufacturing, sales and marketing organization.

We may not be successful in recruiting the manufacturing, sales and marketing personnel necessary to sell CGuard Prime upon approval, if at all, and, even if we do build a sales force, we may not be successful in marketing CGuard Prime, which would have a material adverse effect on our business, financial condition and results of operations.

If we are unable to establish our own manufacturing, sales, marketing and distribution capabilities or enter into successful arrangements with third parties to perform these services, any future product revenues and our profitability, may be materially adversely affected.

Physicians may not widely adopt our products unless they determine, based on experience, long-term clinical data and published peer reviewed journal articles, among other standard-of-care considerations, that the use of our stents provides a safe and effective alternative to other existing treatments for coronary artery disease and carotid artery disease.

We believe that physicians will not widely adopt our products unless they determine, based on experience, long-term clinical data, published peer reviewed journal articles and payor coverage policies, among other factors, that the use of our products provide a safe and effective alternative to other existing treatments for the conditions we are seeking to address.

If we fail to demonstrate safety and efficacy that is at least comparable to existing and future therapies available on the market, our ability to successfully market our products will be significantly limited. Even if the data collected from clinical studies or clinical experience indicate positive results, each physician's actual experience with our products will vary. Clinical trials conducted with our products may involve procedures performed by physicians who are technically proficient and are high-volume stent users of such products. Consequently, both short-term and long-term results reported in these clinical trials may be significantly more favorable than typical results of practicing physicians, which could negatively affect rates of adoptions of our products. We also believe that published peer-reviewed journal articles and recommendations and support by influential physicians regarding our products will be important for market acceptance and adoption, and we cannot assure you that we will receive these recommendations and support, or that supportive articles will be published.

We face manufacturing risks that could adversely affect our ability to manufacture products, reduce our gross margins and negatively affect our business and operating results.

Our business strategy following the anticipated commercialization of the CGuard Prime carotid stent system depends on our ability to manufacture, and our contract manufacturers' ability to manufacture, our current and future products in sufficient quantities and on a timely basis to meet customer demand, while adhering to product quality standards, complying with regulatory quality system requirements and managing manufacturing costs. We currently manufacture our CGuard EPS and our CGuard Prime at our own facility in Israel where we handle the entire assembly process for CGuard EPS and CGuard Prime, including knitting and securing the sleeve to the stent and the crimping of the sleeved stent into a delivery catheter. In addition, to support our anticipated production growth following the anticipated commercialization of the CGuard Prime carotid stent system, we have engaged Aptyx, a contract manufacturer, to transfer the manufacturing of CGuard Prime finished goods to full-scale production at their ISO Class 7 cleanroom facility in North Carolina. If our or our manufacturing partners' facilities suffers damage, or a force majeure event, this could materially impact our ability to operate.

We are also subject to numerous other risks relating to our manufacturing capabilities, including:

- quality and reliability of components, sub-assemblies and materials that we source from third-party suppliers, who are required to meet our quality specifications, the majority of which are our single-source suppliers for the products they supply;
- our or our manufacturing partners' inability to secure components, sub-assemblies and materials in a timely manner, in sufficient quantities or on commercially reasonable terms;
- our or our manufacturing partners' inability to maintain compliance with quality system requirements or pass regulatory quality inspections;
- our or our manufacturing partners' failure to develop products in a timely manner or to required specifications or to increase production capacity or volumes to meet demand;
- our or our manufacturing partners' inability to design or modify production processes to enable us to produce future products efficiently or implement changes in current products in response to design or regulatory requirements; and
- difficulty identifying and qualifying, and obtaining new regulatory approvals, for alternative suppliers for components in a timely manner.

As demand for our products increases, we will have to invest additional resources to purchase components, sub-assemblies and materials, hire and train employees, and enhance our manufacturing processes. If we or our manufacturing partners fail to increase our production capacity efficiently, we may not be able to fill customer orders on a timely basis, our sales may not increase in line with our expectations, and our operating margins could fluctuate or decline. In addition, although we expect some of our products in development to share product features, components, sub-assemblies and materials with our existing products, the manufacture of these products may require modification of our or our manufacturing partners' current production processes or unique production processes, the hiring of specialized employees, the identification of new suppliers for specific components, sub-assemblies and materials or the development of new manufacturing technologies. It may not be possible for us or our manufacturing partners to manufacture these products at a cost or in quantities sufficient to make these products commercially viable or to maintain current gross margins, all of which could have a material adverse effect on our business, financial condition and results of operations.

Finally, the production of our stents must occur in a highly controlled, clean environment to minimize particles and other yield and quality-limiting contaminants. In spite of stringent quality controls, weaknesses in process control or minute impurities in materials may cause a substantial percentage of defective products in a lot. If we or our third party manufacturer are unable to maintain stringent quality controls, or if contamination problems arise, our clinical development and commercialization efforts could be delayed, which would harm our business and results of operations.

CGuard and Switch Guard are complex medical devices that requires training for qualified personal.

CGuard and SwitchGuard are complex medical devices that requires training for qualified personal, including physicians. Although our distributors will be required to ensure that CGuard and SwitchGuard is prescribed only by trained clinicians, the potential for misuse of CGuard and SwitchGuard still exists due to its complexity. Such misuse could result in adverse medical consequences for patients that could damage our reputation, subject us to costly product liability litigation and otherwise have a material adverse effect on our business, financial condition and results of operations.

We operate in an intensely competitive and rapidly changing business environment, and there is a substantial risk our products could become obsolete or uncompetitive.

The medical device market is highly competitive. We compete with many medical device companies globally in connection with our current products and products under development. We face intense competition from numerous pharmaceutical and biotechnology companies in the therapeutics area, as well as competition from academic institutions, government agencies and research institutions. Abbott Laboratories, Boston Scientific Corporation, Medtronic, Cordis Corporation and Terumo Medical Corporation produce a polytetrafluoroethylene mesh-covered stent and a double layer metal stent, respectively. As we develop and seek regulatory approval in the United States and Europe for our new TCAR neuroprotection system SwitchGuard and continue to seek greater market share for CGuard, we expect to compete with Silk Road Medical, which was acquired by Boston Scientific Corporation, in the total carotid artery revascularization market that comprises CAS, TCAR and CEA. Most of our current and potential competitors, including but not limited to those listed above, have, and will continue to have, substantially greater financial, technological, research and development, regulatory and clinical, manufacturing, marketing and sales, distribution and personnel resources than we do. There can be no assurance that we will have sufficient resources to successfully commercialize our products, if and when they are approved for sale. The worldwide market for stent products is characterized by intensive development efforts and rapidly advancing technology. For example, during the second quarter of 2022 we ceased sales of our MGuard Prime EPS following a phase out period due to a shift in industry preferences. Our future success will depend largely upon our ability to anticipate and keep pace with those developments and advances. Current or future competitors could develop alternative technologies, products or materials that are more effective, easier to use or more economical than what we or any potential licensee develop. If our technologies or products become obsolete or uncompetitive, our related product sales and licensing revenue would decrease. This would have a material adverse effect on our business, financial condition and results of operations.

We may become subject to claims by much larger and better capitalized competitors enforcing their intellectual property rights against us or seeking to invalidate our intellectual property or our rights thereto.

Based on the prolific litigation that has occurred in the stent industry and the fact that we may pose a competitive threat to some large and well-capitalized companies that own or control patents relating to stents and their use, manufacture and delivery, we believe that it is possible that one or more third parties will assert a patent infringement claim against the manufacture, use or sale of our stents based on one or more of these patents. These companies also own patents relating to the use of drugs to treat restenosis, stent architecture, catheters to deliver stents, and stent manufacturing and coating processes and compositions, as well as general delivery mechanism patents like rapid exchange, which might be alleged to cover one or more of our products. In addition, it is possible that a lawsuit of which we are not aware asserting patent infringement, misappropriation of intellectual property, or related claims may have already been filed against us. As the number of competitors in the stent market grows and as the geographies in which we commercially market grow in number and scope, the possibility of patent infringement by us, and/or a patent infringement or misappropriation claim against us, increases.

Our competitors have maintained their positions in the market by, among other things, establishing intellectual property rights relating to their products and enforcing these rights aggressively against their competitors and new entrants into the market. All the major companies in the field of stents and related markets, including Boston Scientific, C.R. Bard, Inc., W.L. Gore & Associates and Medtronic, have been repeatedly involved in patent litigation relating to stents since at least 1997. The field of stents and related markets have experienced rapid technological change and obsolescence in the past, and our competitors have strong incentives to stop or delay the introduction of new products and technologies. We may pose a competitive threat to many of the companies in these markets. Accordingly, these companies will have a strong incentive to take steps, through patent litigation or otherwise, to prevent us from distributing our products. Such litigation or claims would divert attention and resources away from the development and/or commercialization of our products and could result in an adverse court judgment that would make it impossible or impractical to sell our products in one or more territories.

If we fail to maintain or establish satisfactory agreements or arrangements with suppliers or if we experience an interruption of the supply of materials from suppliers, we may not be able to obtain materials that are necessary to develop our products.

We depend on outside suppliers for certain raw materials. These raw materials or components may not always be available at our standards or on acceptable terms, if at all, and we may be unable to locate alternative suppliers or produce necessary materials or components on our own.

Some of the components of our products are currently provided by only one vendor, or a single-source supplier. We may have difficulty obtaining similar components from other suppliers that are acceptable to the FDA or foreign regulatory authorities if it becomes necessary. In 2022, our mesh supplier informed us that they will not be able to supply the polymer fiber in the future due to supply issues with the current PET resin. Therefore we purchased inventory which should be sufficient to support our production needs until the end of 2027. We are currently testing a different source of PET showing equivalent mechanical properties and biocompatibility of the original raw material. However there can be no assurance that the alternative source will result in successful validation and if we are unable to timely source an alternative supplier this could result regulatory delays and the interruption of our manufacturing and delivery of stents for an extended period of time which would delay completion of our clinical trials or commercialization of our products.

In addition, we will be required to obtain prior regulatory approval from the FDA or foreign regulatory authorities to use different suppliers or components that may not be as safe or as effective. As a result, regulatory approval of our products may not be received on a timely basis or at all.

Finally, we rely on a third-party vendor to perform the sterilization process. A third-party vendor's failure to properly sterilize a component may cause delays or disruptions in our manufacturing process.

Increasing inflation could adversely affect our business, financial condition, results of operations or cash flows.

Inflation and some of the measures taken by or that may be taken by the governments in countries where we operate in an attempt to curb inflation may have negative effects on the economies of those countries generally. If the United States or other countries where we operate experience substantial inflation in the future, our business may be adversely affected. This could have a material adverse impact on our business, financial condition, results of operations or cash flows.

Risks Related to our Clinical Trials and Regulatory Matters

Completing clinical trials for CGuard, SwitchGuard or any other product we develop in the United States require meeting a number of regulatory requirements and must be conducted in compliance with the FDA's IDE regulations. Failure to maintain compliance with IDE regulations could have a material adverse effect on our business.

Clinical trials involve use of a medical device on human subjects under the supervision of qualified investigators in accordance with current Good Clinical Practices, including the requirement that all research subjects provide informed consent for their participation in the clinical study. The FDA classifies medical device candidates into "significant risk" and "non-significant risk" devices. Significant risk devices present a potential for serious risk to the health, safety, or welfare of a subject. Examples may include implants, devices that support or sustain human life, and devices that are substantially important in diagnosing, curing, mitigating, or treating disease or in preventing impairment to human health. If a medical device candidate presents a significant risk, an IDE application must be submitted and approved prior to commencing any human clinical trials in the United States in connection with such device.

In addition to our IDE approval, we must apply for and obtain IRB approval in connection with each clinical study site before commencing any study activities. A written protocol with predefined end points, an appropriate sample size, and pre-determined patient inclusion and exclusion criteria, is also required before we may initiate or conduct the trial.

Importantly, the C-GUARDIANS and C-GUARDIANS II trials and any others that we are conducting or may conduct in the future, must be conducted in accordance with the FDA's IDE regulations, which, among other things, establish requirements for investigational device labeling, prohibit pre-approval promotion of a device candidate, and specify recordkeeping, reporting, and monitoring responsibilities of study sponsors and study investigators.

We may not be able to obtain IRB approval to undertake clinical trials in the United States for any products we intend to market in the United States in the future. If we do obtain such approvals, we may not be able to conduct studies which comply with the IDE and other regulations governing clinical investigations or the data from any such trials may not support clearance or approval of the investigational device. Failure to obtain such approvals or to comply with such regulations could have a material adverse effect on our business, financial condition and results of operations.

Relatedly, certainty that clinical trials must meet FDA requirements, including desired endpoints, produce meaningful or useful data, and be free of unexpected adverse effects, or that the FDA will accept the validity of foreign clinical study data, as applicable, cannot be guaranteed, and such uncertainty could preclude or delay regulatory approvals and commercialization, resulting in significant financial costs and reduced revenue. Moreover, the timing of the commencement, continuation, and completion of any future clinical trial may be subject to significant delays attributable to various causes, including, but not limited to, scheduling conflicts with participating clinicians and clinical institutions, difficulties in identifying and enrolling patients who meet trial eligibility criteria, failure of patients to complete the clinical trial, delay in or failure to meet regulatory and/or IRB requirements to conduct a clinical trial at a one or more prospective sites, and shortages of supply in the investigational device.

Clinical trials necessary to support a PMA application are lengthy and expensive and require the enrollment of a large number of patients, and suitable patients may be difficult to identify and recruit. Any such delay or failure of clinical trials could prevent us from commercializing our stent products, which would materially and adversely affect our results of operations and the value of our business.

Clinical trials necessary to support a pre-market approval application to the FDA for our products, including CGuard, SwitchGuard and any other product we develop are expensive and require the enrollment of a large number of patients, and suitable patients may be difficult to identify and recruit, which may cause a delay in the development and commercialization of our products. Patient enrollment in clinical trials and the ability to successfully complete patient follow-up depends on many factors, including the size of the patient population, the nature of the trial protocol, the proximity of patients to clinical sites, the eligibility criteria for the clinical trial and patient compliance. For example, patients may be discouraged from enrolling in our clinical trials if the trial protocol requires them to undergo extensive post-treatment procedures or follow-up to assess the safety and efficacy of our products, or they may be persuaded to participate in contemporaneous clinical trials of competitive products. In addition, patients participating in our clinical trials may die before completion of the trial or suffer adverse medical events unrelated to or related to our products. Delays in patient enrollment or failure of patients to continue to participate in a clinical trial, including during a follow-up period, may cause an increase in costs and delays or result in the failure of the clinical trial.

In addition, the length of time required to complete clinical trials for pharmaceutical and medical device products varies substantially according to the degree of regulation and the type, complexity, novelty and intended use of a product, and can continue for several years and cost millions of dollars. The commencement and completion of clinical trials for our products under development may be delayed by many factors, including governmental or regulatory delays and changes in regulatory requirements, policy and guidelines or our inability or the inability of any potential licensee to manufacture or obtain from third parties materials sufficient for use in preclinical studies and clinical trials.

The results of our C-GUARDIANS trial as well as any other clinical trials may be insufficient to obtain regulatory approval for our products.

We will only receive regulatory approval to commercialize CGuard Prime, SwitchGuard or any other product we develop if we can demonstrate to the satisfaction of the FDA or the applicable foreign regulatory agency, in well designed and conducted clinical trials, that the product is safe and effective. If we are unable to demonstrate that a product is safe and effective in advanced clinical trials involving large numbers of patients, we will be unable to submit the necessary application to receive regulatory approval to commercialize the product. We face risks that:

- the product may not prove to be safe or effective;
- the product's benefits may not outweigh its risks;
- the results from advanced clinical trials may not confirm the positive results from pre-clinical studies and early clinical trials;
- the FDA or comparable foreign regulatory authorities may interpret data from pre-clinical and clinical testing in different ways than us; and
- the FDA or other regulatory agencies may require additional or expanded trials and data.

Patients may discontinue their participation in our clinical studies, which may negatively impact the results of these studies and extend the timeline for completion of our development programs.

Clinical trials for our products require sufficient patient enrollment. We may not be able to enroll a sufficient number of patients in a timely or cost-effective manner. Patients enrolled in our clinical studies may discontinue their participation at any time during the study as a result of a number of factors, including withdrawing their consent or experiencing adverse clinical events, which may or may not be judged to be related to our products under evaluation. If a large number of patients in a study discontinue their participation in the study, the results from that study may not be positive or may not support a filing for regulatory approval of the product.

In addition, the time required to complete clinical trials is dependent upon, among other factors, the rate of patient enrollment. Patient enrollment is a function of many factors, including the following:

- the size of the patient population;
- the nature of the clinical protocol requirements;
- the availability of other treatments or marketed therapies (whether approved or experimental);
- our ability to recruit and manage clinical centers and associated trials;
- the proximity of patients to clinical sites; and
- the patient eligibility criteria for the study.

Even if CGuard Prime, SwitchGuard or any other product we develop receives marketing approval, we or others may later discover that the product is less effective than previously believed or causes undesirable side effects that were not previously identified, which could compromise our ability or that of any collaborators to market the product, and could cause regulatory authorities to take certain regulatory actions.

It is possible that our clinical trials may indicate an apparent positive effect of a product that is greater than the actual positive effect, if any, or alternatively fail to identify undesirable side effects. For example, we, or others, may discover that our products are less safe and effective than previously believed. If, we, or others, discover that a product is less effective than previously believed or causes undesirable side effects that were not previously identified, any of the following adverse events could occur:

- regulatory authorities may withdraw their approval of the product or seize the product;
- we, or any of our collaborators, may be required to recall the product, change the way the product is administered or conduct additional clinical trials;
- additional restrictions may be imposed on the marketing of, or the manufacturing processes of, the particular product;
- we, or any of our collaborators, may be subject to fines, injunctions or the imposition of civil or criminal penalties;
- regulatory authorities may require the addition of labeling statements, such as a “black box” warning or a contraindication including with the product;
- we, or any of our collaborators, may be required to create a Medication Guide outlining the risks of the previously unidentified side effects for distribution to patients;
- we could be sued and held liable for harm caused to patients;
- physicians and patients may stop using our product; and
- our reputation may suffer.

Any of these events could harm our business and operations and could negatively impact our stock price.

Our products may in the future be subject to product notifications, recalls, or voluntary market withdrawals that could harm our reputation, business and financial results.

After regulatory approval has been obtained for medical device products, the product and the manufacturer are subject to continual review, including the review of adverse events and clinical results that are reported after our products are made available to patients, and there can be no assurance that such approval will not be withdrawn or restricted. Regulators may also subject approvals to restrictions or conditions or impose post-approval obligations on the holders of these approvals, and the regulatory status of such products may be jeopardized if such obligations are not fulfilled. If post-approval studies are required, such studies may involve significant time and expense.

The manufacturing and marketing of medical devices involves an inherent risk that our products may prove to be defective and cause a health risk even after regulatory clearances have been obtained. Medical devices may also be modified after regulatory clearance is obtained to such an extent that additional regulatory clearance is necessary before the device can be further marketed. In these events, we may voluntarily implement a recall or market withdrawal or may be required to do so by a regulatory authority.

In the European Economic Area, we must comply with the EU Medical Device Vigilance System. Under this system, manufacturers are required to take Field Safety Corrective Actions (“FSCAs”) to reduce a risk of death or serious deterioration in the state of health associated with the use of a medical device that is already placed on the market. A FSCA may include the recall, modification, exchange, destruction or retrofitting of the device. FSCAs must be communicated by the manufacturer or its legal representative to its customers and/or to the end users of the device through Field Safety Notices.

Any adverse event involving our products could result in other future voluntary corrective actions, such as recalls or customer notifications, or agency action, such as inspection or enforcement action. Adverse events have been reported to us in the past, and we cannot guarantee that they will not occur in the future. Any corrective action, whether voluntary or involuntary, as well as defending ourselves in a lawsuit, would require the dedication of our time and capital, distract management from operating our business and could harm our reputation and financial results.

We have only limited experience in regulatory affairs, which may affect our ability, or the time required, to navigate complex regulatory requirements and obtain necessary regulatory approvals, if such approvals are received at all. Regulatory delays or denials may increase our costs, cause us to lose revenue and materially and adversely affect our results of operations and the value of our business.

Because long-term success measures have not been completely validated for our products, especially CGuard, SwitchGuard and any other product we may develop, regulatory agencies may take a significant amount of time in evaluating product approval applications. Treatments may exhibit a favorable measure using one metric and an unfavorable measure using another metric. Any change in accepted metrics may result in reconfiguration of, and delays in, our clinical trials. Additionally, we have only limited experience in filing and prosecuting the applications necessary to gain regulatory approvals, and our clinical, regulatory and quality assurance personnel are currently composed of only ten employees. As a result, we may experience delays in connection with obtaining regulatory approvals for our products.

In addition, the products we and any potential licensees license, develop, manufacture and market are subject to complex regulatory requirements, particularly in the United States, Europe and Asia, which can be costly and time-consuming. There can be no assurance that such approvals will be granted on a timely basis, if at all. Furthermore, there can be no assurance of continued compliance with all regulatory requirements necessary for the manufacture, marketing and sale of the products we will offer in each market where such products are expected to be sold, or that products we have commercialized will continue to comply with applicable regulatory requirements. If a government regulatory agency were to conclude that we were not in compliance with applicable laws or regulations, the agency could institute proceedings to detain or seize our products, issue a recall, impose operating restrictions, enjoin future violations and assess civil and criminal penalties against us, our officers or employees and could recommend criminal prosecution. Furthermore, regulators may proceed to ban, or request the recall, repair, replacement or refund of the cost of, any device manufactured or sold by us. Furthermore, there can be no assurance that all necessary regulatory approvals will be obtained for the manufacture, marketing and sale in any market of any new product developed or that any potential licensee will develop using our licensed technology.

Even if our products are approved by regulatory authorities, if we or our suppliers fail to comply with ongoing regulatory requirements, or if we experience unanticipated problems with our products, these products could be subject to restrictions or withdrawal from the market.

Any regulatory approvals that we receive for our products will require surveillance to monitor the safety and efficacy of the product and may require us to conduct post-approval clinical studies. In addition, if a regulatory authority approves our products, the manufacturing processes, labeling, packaging, distribution, adverse event reporting, storage, advertising, promotion, import, export and recordkeeping for our products will be subject to extensive and ongoing regulatory requirements.

Moreover, if we obtain regulatory approval for any of our products, we will only be permitted to market our products for the indication approved by the regulatory authority, and such approval may involve limitations on the indicated uses or promotional claims we may make for our products. In addition, later discovery of previously unknown problems with our products, including adverse events of unanticipated severity or frequency, or with our suppliers or manufacturing processes, or failure to comply with regulatory requirements, may result in, among other things:

- restrictions on the marketing or manufacturing of our products, withdrawal of the product from the market, or voluntary or mandatory product recalls;
- fines, warning letters, or untitled letters;
- holds on clinical trials;
- refusal by the regulatory authority to approve pending applications or supplements to approved applications filed by us or suspension or revocation of license approvals;
- product seizure or detention, or refusal to permit the import or export of our products; and
- injunctions, the imposition of civil penalties or criminal prosecution.

The FDA also requires that our sales and marketing efforts, as well as promotions, be consistent with various laws and regulations. Approved medical device promotions must be consistent with and not contrary to labeling, balanced, truthful and not false or misleading, adequately substantiated (when required), and include adequate directions for use and any warnings that may be required in the use of the device. In addition to the requirements applicable to approved products, we may also be subject to enforcement action in connection with any promotion of an investigational new device. A sponsor or investigator, or any person acting on behalf of a sponsor or investigator, may not represent in a promotional context that an investigational new device is safe or effective for the purposes for which it is under investigation or otherwise promote the device.

If the FDA investigates our marketing and promotional materials or other communications and finds that any of our investigational devices, or future commercial products, if any, are being marketed or promoted in violation of the applicable regulatory restrictions, we could be subject to the enforcement actions listed above, among others. Any enforcement action (or related lawsuit, which could follow such action) brought against us in connection with alleged violations of applicable device promotion requirements, or prohibitions, could harm our business and our reputation, as well as the reputation of any devices that may be approved for marketing in the U.S. in the future.

The applicable regulatory authorities' policies may change, and additional government regulations may be enacted that could prevent, limit or delay regulatory approval of our products. We cannot predict the likelihood, nature or extent of government regulation that may arise from future legislation or administrative action, either in the United States or abroad. If we are slow or unable to adapt to changes in existing requirements or the adoption of new requirements or policies, or if we are not able to maintain regulatory compliance, we may lose any marketing approval that we may have obtained and we may not achieve or sustain profitability.

Failure to obtain regulatory approval in foreign jurisdictions will prevent us from marketing our products in such jurisdictions.

We market CGuard EPS in certain international markets. In order to market any our products in other foreign jurisdictions, we must obtain separate regulatory approvals from the appropriate governing body in each applicable country. The approval processes vary among countries and can involve additional testing, and the time required to obtain approval may differ from that required to obtain CE mark or FDA approval. Foreign regulatory approval processes may include all of the risks associated with obtaining CE mark or FDA approval in addition to other risks. We may not obtain foreign regulatory approvals on a timely basis, if at all. CE mark approval or any future FDA approval does not ensure approval by regulatory authorities in other countries. We may not be able to file for regulatory approvals and may not receive necessary approvals to commercialize our products in certain markets.

We are, or may be, subject to federal, state and foreign healthcare laws and regulations and implementation of or changes to such healthcare laws and regulations could adversely affect our business and results of operations.

In both the United States and certain foreign jurisdictions, there are laws and regulations specific to the healthcare industry which may affect all aspects of our business, including development, testing, marketing, sales, pricing, and reimbursement. Additionally, there have been a number of legislative and regulatory proposals in recent years to change the healthcare system in ways that could impact our ability to sell our products. If we are found to be in violation of any of these laws or any other federal or state regulations, we may be subject to administrative, civil and/or criminal penalties, damages, fines, individual imprisonment, exclusion from federal healthcare programs and the restructuring of our operations. Any of these could have a material adverse effect on our business and financial results. Since many of these laws have not been fully interpreted by the courts, there is an increased risk that we may be found in violation of one or more of their provisions. Any action against us for violation of these laws, even if we ultimately are successful in our defense, will cause us to incur significant legal expenses and divert our management's attention away from the operation of our business.

We may be subject, directly or indirectly, to applicable U.S. federal and state anti-kickback, false claims laws, physician payment transparency laws, fraud and abuse laws or similar healthcare and security laws and regulations, which could expose us to criminal sanctions, civil penalties, contractual damages, reputational harm and diminished profits and future earnings.

Healthcare providers, physicians and others will play a primary role in the recommendation, ordering and utilization of any products for which we obtain regulatory approval. If we obtain U.S. Food & Drug Administration approval for any of our products and begin commercializing those products in the United States, our operations may be subject to various federal and state fraud and abuse laws, including, without limitation, the federal Anti-Kickback Statute, the federal False Claims Act, and physician payment sunshine laws and regulations. These laws may impact, among other things, our potential sales, marketing and education programs. In addition, we may be subject to patient privacy regulation by both the federal government and the states in which we conduct our business. The laws that may affect our ability to operate include:

- the federal Anti-Kickback Statute, which prohibits, among other things, knowingly and willfully soliciting, receiving, offering or paying any remuneration (including any kickback, bribe, or rebate), directly or indirectly, overtly or covertly, in cash or in kind, to induce, or in return for, either the referral of an individual, or the purchase, lease, order or recommendation of any good, facility, item or service for which payment may be made, in whole or in part, under a federal healthcare program, such as the Medicare and Medicaid programs;
- federal civil and criminal false claims laws and civil monetary penalty laws, including the False Claims Act, which may be pursued through civil whistleblower or qui tam actions, impose criminal and civil penalties against individuals or entities for knowingly presenting, or causing to be presented, to the federal government, claims for payment or approval from Medicare, Medicaid or other third-party payors that are false or fraudulent or making a false statement to avoid, decrease or conceal an obligation to pay money to the federal government;

- federal criminal statutes created through the Health Insurance Portability and Accountability Act of 1996 (“HIPAA”), which prohibit knowingly and willfully executing, or attempting to execute, a scheme to defraud any healthcare benefit program or obtain, by means of false or fraudulent pretenses, representations, or promises, any of the money or property owned by, or under the custody or control of, any healthcare benefit program, regardless of the payor (e.g., public or private) and knowingly and willfully falsifying, concealing or covering up by any trick or device a material fact or making any materially false statements in connection with the delivery of, or payment for, healthcare benefits, items or services relating to healthcare matters;
- HIPAA, as amended by the Health Information Technology for Economic and Clinical Health Act of 2009 and their respective implementing regulations, which imposes requirements on certain covered healthcare providers, health plans, and healthcare clearinghouses as well as their respective business associates that perform services for them that involve the use, or disclosure of, individually identifiable health information, relating to the privacy, security and transmission of individually identifiable health information;
- the federal transparency requirements under The Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act, enacted into law in the United States in March 2010 (known collectively as the “Affordable Care Act”), including the provision commonly referred to as the Physician Payments Sunshine Act, which requires manufacturers of drugs, biologics, devices and medical supplies for which payment is available under Medicare, Medicaid or the Children’s Health Insurance Program to report annually to the U.S. Department of Health and Human Services information related to payments or other transfers of value made to physicians and teaching hospitals, as well as ownership and investment interests held by physicians and their immediate family members; and
- state and federal consumer protection and unfair competition laws, which broadly regulate marketplace activities and activities that potentially harm consumers.

Additionally, we may be subject to state and non-U.S. equivalents of each of the healthcare laws described above, among others, some of which may be broader in scope and may apply regardless of the payor. Many U.S. states have adopted laws similar to the federal Anti-Kickback Statute, some of which apply to the referral of patients for healthcare services reimbursed by any source, not just governmental payors, including private insurers. Several states impose marketing restrictions or require medical device companies to make marketing or price disclosures to the state. There are ambiguities as to what is required to comply with these state requirements, and if we fail to comply with an applicable state law requirement, we could be subject to penalties.

Because of the breadth of these laws and the narrowness of the statutory exceptions and safe harbors available, it is possible that some of our future business activities could be subject to challenge under one or more of such laws. In addition, healthcare reform legislation has strengthened these laws. For example, the Affordable Care Act, among other things, amended the intent requirement of the federal Anti-Kickback and criminal healthcare fraud statutes. As a result of such amendment, a person or entity no longer needs to have actual knowledge of these statutes or specific intent to violate them in order to have committed a violation. Moreover, the Affordable Care Act provides that the government may assert that a claim including items or services resulting from a violation of the federal Anti-Kickback Statute constitutes a false or fraudulent claim for purposes of the False Claims Act.

Violations of fraud and abuse laws may be punishable by criminal and/or civil sanctions, including penalties, fines and/or exclusion or suspension from federal and state healthcare programs such as Medicare and Medicaid and debarment from contracting with the U.S. government. In addition, private individuals have the ability to bring actions on behalf of the U.S. government under the False Claims Act as well, as under the false claim laws of several states.

Efforts to ensure that our business arrangements with third parties comply with applicable healthcare laws and regulations will involve substantial costs. It is possible that governmental authorities will conclude that our existing or future business practices do not comply with current or future statutes, regulations or case law involving applicable fraud and abuse or other healthcare laws and regulations. Any such actions instituted against us could have a significant adverse impact on our business, including the imposition of civil, criminal and administrative penalties, damages, disgorgement, monetary fines, possible exclusion from participation in Medicare, Medicaid and other federal healthcare programs, contractual damages, reputational harm, diminished profits and future earnings, and curtailment of our operations, any of which could adversely affect our ability to operate our business and our results of operations. Even if we are successful in defending against such actions, we may nonetheless be subject to substantial costs, reputational harm and adverse effects on our ability to operate our business. In addition, the approval and commercialization of any of our products outside the United States will also likely subject us to non-U.S. equivalents of the healthcare laws mentioned above, among other non-U.S. laws.

If any of our employees, agents, or the physicians or other providers or entities with whom we expect to do business are found to have violated applicable laws, we may be subject to criminal, civil or administrative sanctions, including exclusions from government funded healthcare programs, or, if we are not subject to such actions, we may suffer reputational harm for conducting business with persons or entities found, or accused of being, in violation of such laws. Any such events could adversely affect our ability to operate our business and our results of operations.

We may be exposed to product liability claims and insurance may not be sufficient to cover these claims.

We may be exposed to product liability claims based on the use of any of our products, or products incorporating our licensed technology, in the market or clinical trials. We may also be exposed to product liability claims based on the sale of any products under development following the receipt of regulatory approval. Product liability claims could be asserted directly by consumers, health-care providers or others. We have obtained product liability insurance coverage; however, such insurance may not provide full coverage for our future clinical trials, products to be sold, and other aspects of our business. Insurance coverage is becoming increasingly expensive, and we may not be able to maintain current coverage or expand our insurance coverage to include future clinical trials or the sale of new products or existing products in new territories, at a reasonable cost or in sufficient amounts to protect against losses due to product liability or at all. A successful product liability claim, or series of claims brought against us could result in judgments, fines, damages and liabilities that could have a material adverse effect on our business, financial condition and results of operations. We may incur significant expense investigating and defending these claims, even if they do not result in liability. Moreover, even if no judgments, fines, damages or liabilities are imposed on us, our reputation could suffer, which could have a material adverse effect on our business, financial condition and results of operations.

Even if one or more of our products are approved by the FDA, we may fail to obtain an adequate level of reimbursement for our products by third party payors, such that there may be no commercially viable markets for our products, or the markets, may be much smaller than expected.

The availability and levels of reimbursement by governmental and other third-party payors affect the market for our products. The efficacy, safety, performance and cost-effectiveness of our products and of any competing products are factors that may impact the availability and level of reimbursement. Reimbursement and healthcare payment systems in international markets vary significantly by country and include both government sponsored healthcare and private insurance. To obtain reimbursement or pricing approval in some countries, we may be required to produce clinical data, which may involve one or more clinical trials that compares the cost-effectiveness of our products to other available therapies. We may not obtain international reimbursement or pricing approvals in a timely manner, if at all. Our failure to receive international reimbursement or pricing approvals would negatively impact market acceptance of our products in the international markets in which those approvals are sought.

We believe that future reimbursement may be subject to increased restrictions both in the U.S. and in international markets. There is increasing pressure by governments worldwide to contain healthcare costs by limiting both the coverage and the level of reimbursement for therapeutic products and by refusing, in some cases, to provide any coverage for products that have not been approved by the relevant regulatory agency. Future legislation, regulation or reimbursement policies of third-party payors may adversely affect the demand for our products and limit our ability to sell our products on a profitable basis. In addition, third party payors continually attempt to contain or reduce the costs of healthcare by challenging the prices charged for healthcare products and services. If reimbursement for our products is unavailable or limited in scope or amount, or if pricing is set at unsatisfactory levels, market acceptance of our products would be impaired, and future revenues, if any, would be adversely affected.

In the United States and European Union, our business could be significantly and adversely affected by healthcare reform initiatives and/or other legislation or judicial interpretations of existing or future healthcare laws and/or regulations.

The environment for health care policy generally may be changed with the new President. President Trump has begun to reduce the numbers of employees that work at the Department of Health and Human Services, that includes the FDA and CMS. In addition, there are evaluations of laws, like the Affordable Care Act, may be subject to modifications under the current leadership. With a reduction of employees at FDA, this would likely slow down the reviews and approvals of products. In addition, the reduction of employees from CMS may also slow down the payment for those individuals who have coverage under Medicare, Medicaid and the Affordable Care Act. It is difficult to assess what may occur. Uncertainties remain regarding what negative unintended consequences these provisions will have on patient access to new technologies, pricing and the market for our products. If Medicare, Medicaid and the Affordable Care Act, any significant reductions in coverage or payment for services may impact those beneficiaries who can't get access to certain FDA approved products. In addition, lower reimbursement by government programs may shift costs to employees who have coverage from their employee or private payors. While there are some uncertainties regarding the U.S. coverage and payment for medical devices, the strength of the health care providers and payors are likely to work to mitigate some adverse issues that may impact the health care system.

Since its enactment, there have been judicial and Congressional challenges to certain aspects of the Affordable Care Act, to modify, repeal or otherwise invalidate all, or certain provisions of, the Affordable Care Act. Following the enactment of the Tax Act, on December 14, 2018 in a case in the United States District Court for the Northern District of Texas, a federal judge ruled that the individual mandate imposed by the Affordable Care Act is unconstitutional and inseverable from the other provisions of the Affordable Care Act and, therefore, the remaining provisions of the Affordable Care Act are invalid. On November 10, 2020, the United States Supreme Court heard arguments on whether the Affordable Care Act is constitutional, in whole or in part, and determined that the case lacked standing. The regulatory process of implementation of the Affordable Care Act will remain ongoing and may also increase our regulatory burdens and operating costs. Litigation and legislation related to the Affordable Care Act are likely to continue, with unpredictable and uncertain results. We cannot predict with certainty what affect further changes to the Affordable Care Act, and other similar health care laws that are enacted, would have on our business.

In addition, other legislative changes have been proposed and adopted since the Affordable Care Act was enacted. These changes included aggregate reductions to Medicare payments to providers of up to two percent per fiscal year, which will remain in effect through 2027 unless additional Congressional action is taken. It is unclear what impact new quality and payment programs may have on our business, financial condition, results of operations or cash flows. Individual states in the United States have also become increasingly aggressive in passing legislation and implementing regulations designed to control product pricing, including price or patient reimbursement constraints, and discounts, and require marketing cost disclosure and transparency measures. We believe that additional state and federal health care reform measures may be adopted in the future that could have a material adverse effect on our industry generally and on our customers. Any changes in, or uncertainty with respect to, future reimbursement rates could impact our customers' demand for our products, which in turn could have a material adverse effect on our business, financial condition, results of operations, or cash flows. Further, the federal, state and local governments, Medicare, Medicaid, managed care organizations, and foreign governments have in the past considered, are currently considering, and may in the future consider healthcare policies and proposals intended to curb rising healthcare costs, including those that could significantly affect both private and public reimbursement for healthcare services. Future significant changes in the healthcare systems in the United States or other countries, including changes intended to reduce expenditures along with uncertainty about whether and how changes may be implemented, could have a negative impact on the demand for our products. We are unable to predict with certainty whether other healthcare policies, including policies stemming from legislation or regulations affecting our business, may be proposed or enacted in the future; what effect such policies would have on our business; or the effect ongoing uncertainty about these matters will have on our customers' purchasing decisions.

We cannot predict the impact that such actions against the Affordable Care Act and other laws enacted after its enactment will have on our business, and there is uncertainty as to what healthcare programs and regulations may be implemented or changed at the federal and/or state level in the United States, or the effect of any future legislation or regulation. Furthermore, we cannot predict what actions the Biden administration will implement in connection with laws impacting us. However, it is possible that such initiatives could have an adverse effect on our ability to obtain approval and/or successfully commercialize products in the United States in the future. For example, any changes that reduce, or impede the ability to obtain, reimbursement for the type of products we intend to commercialize in the United States (or our products more specifically, if approved) or reduce medical procedure volumes could adversely affect our business plan to introduce our products in the United States.

In May 2017, the European parliament and the council of the European Union approved the MDR which has replaced the existing medical device directives (93/42/EEC) and (90/385/EEC). The regulations entered into full application on May 26, 2021. The MDR provided a transitional period for placing on the market or putting into service of medical devices, which period was further extended on March 20, 2023, but such transitional provisions are not relevant to our products where already certified under the MDR. The MDR (as amended on January 10, 2025) imposes stricter requirements on medical device manufacturers and strengthens the supervising competences of the competent authorities of European Union member states, the notified bodies and the authorized representatives. If we fail to comply with the modified regulation and requirements, it can adversely affect our business, operating results and prospects. Any new regulations or revisions or reinterpretations of existing regulations may impose additional costs or lengthen review times of future products.

Risk Factors Related to Our Intellectual Property

If we are unable to obtain and maintain intellectual property protection covering our products, others may be able to make, use or sell our products, which would adversely affect our revenue.

Our ability to protect our products from unauthorized or infringing use by third parties depends substantially on our ability to obtain and maintain valid and enforceable patents. Similarly, the ability to protect our trademark rights might be important to prevent third party counterfeiters from selling poor quality goods using our designated trademarks, and trade names. Due to evolving legal standards relating to the patentability, validity and enforceability of patents covering medical devices and pharmaceutical inventions and the scope of claims made under these patents, our ability to enforce patents is uncertain and involves complex legal and factual questions. Accordingly, rights under any of our pending patent applications and patents may not provide us with commercially meaningful protection for our products or may not afford a commercial advantage against our competitors or their competitive products or processes. In addition, patents may not be issued from any pending or future patent applications owned by or licensed to us, and moreover, patents that may be issued to us now or in the future may later be found invalid or unenforceable. Further, even if valid and enforceable, our patents may not be sufficiently broad to prevent others from marketing products like ours, despite our patent rights.

The validity of our patent claims depends, in part, on whether prior art references exist that describe or render obvious our inventions as of the filing date of our patent applications. We may not have identified all prior art, such as U.S. and foreign patents or published applications or published scientific literature, that could adversely affect the patentability of our issued patents and pending patent applications. For example, some material references may be in a foreign language and may not be uncovered during examination of our patent applications. Additionally, patent applications in the United States are maintained in confidence for up to 18 months after their filing. In some cases, however, patent applications remain confidential in the U.S. Patent and Trademark Office for the entire time prior to issuance as a U.S. patent. Patent applications filed in countries outside the U.S. are not typically published until at least 18 months from their first filing date. Similarly, publication of discoveries in the scientific or patent literature often lags behind actual discoveries. Therefore, we cannot be certain that we were the first to invent, or the first to file patent applications relating to, our stent technologies and related surgical technologies that we are developing. Third parties may initiate adversarial proceedings, known as an inter-partes review (IPR) in the U.S. Patent and Trademark Office to challenge the validity of our patent claims in the United States. It is possible that we may be unsuccessful in the proceedings, resulting in a loss of some portion or all of our patent rights in the United States.

In addition, statutory differences in patentable subject matter among jurisdictions may limit the protection we can obtain on certain of the technologies we develop. The laws of some foreign jurisdictions do not offer the same protection to, or may make it more difficult to effect the enforcement of, proprietary rights as in the United States. This risk may be exacerbated if we move our manufacturing to certain countries in Asia. If we encounter such difficulties or are otherwise precluded from effectively protecting our intellectual property rights in any foreign jurisdictions, our business prospects could be substantially harmed.

Our initiation of litigation to enforce our patent rights may prompt adversaries in such litigation to challenge the validity, scope, ownership, or enforceability of our patents. Third parties can sometimes bring challenges against a patent holder to resolve these issues, as well. If a court decides that any such patents are not valid, not enforceable, not wholly owned by us, or are of a limited scope, we may not have the right to stop others from using our inventions. Also, even if our patent rights are determined by a court to be valid and enforceable, they may not be sufficiently broad to prevent others from marketing products similar to ours or designing around our patents, despite our patent rights, nor do they provide us with freedom to operate unimpeded by the patent and other intellectual property rights of others that may cover our products. We may be forced into litigation to uphold the validity of the claims in our patent portfolio, as well as our ownership rights to such intellectual property, and litigation is often an uncertain and costly process.

We may not be able to protect our trade secrets adequately. Although we rely on non-disclosure and confidentiality agreements with employees, consultants and other parties to protect, in part, trade secrets and other proprietary technology, these agreements may be breached and we may not have adequate remedies for such breach. Moreover, others may independently develop equivalent proprietary information, and third parties may otherwise gain access to our trade secrets and proprietary knowledge. Any disclosure of confidential data into the public domain or to third parties could allow competitors to learn our trade secrets and use the information in competition against us.

The failure to obtain or maintain patents, licensing agreements and other intellectual property rights that are sufficiently broad and protective could impact our ability to compete effectively.

To compete effectively, we need to develop and maintain a proprietary position with regard to our own technologies, intellectual property, licensing agreements, product candidates and business. Legal standards relating to the validity and scope of patent claims in the US and other countries tend to be uncertain and changeable. Therefore, the degree of future protection for our proprietary rights in our core technologies and any products that might be made using these technologies is also uncertain. The risks and uncertainties that we face with respect to our patents and other proprietary rights include the following:

- while some of our patents have been issued, the pending patent applications we have filed may not result in issued patents or may take longer than we expect to result in issued patents;
- a third party may initiate an inter parties review, or IPR, proceedings in the U.S.;
- we may be subject to interference proceedings in the U.S.;
- a third party may initiate opposition proceedings in foreign countries;
- any patents that are issued may not provide meaningful protection;
- we may not be able to develop additional proprietary technologies that are patentable;
- other companies may challenge patents licensed or issued to us;
- other companies may develop new and alternative technologies that do not fall within the scope of our patents;
- other companies may design around patents we have developed; and
- enforcement of patents is complex, uncertain and expensive.

If patent rights covering our products and methods are not sufficiently broad or not issued at all by the United States Patent and Trademark Office (the “USPTO”) or by foreign patent offices, we may not have adequate protection against competitors with similar products and technologies. Furthermore, if the USPTO or foreign patent offices issue patents to us or our licensors, others may challenge the patents or design around the patents, or the patent office or the courts may invalidate the patents. Thus, any patents we own or license from third parties may not provide any protection against our competitors.

We cannot be certain that patents will be issued as a result of any pending applications, and we cannot be certain that any of our issued patents will give us adequate protection from competing products. For example, issued patents may be circumvented or challenged, declared invalid or unenforceable, or narrowed in scope. In addition, since publication of discoveries in the scientific or patent literature often lags behind actual discoveries, we cannot be certain that we were the first to make our inventions or to file patent applications covering those inventions.

It is also possible that others may obtain issued patents that could prevent us from commercializing our products or require us to obtain licenses requiring the payment of significant fees or royalties in order to enable us to conduct our business.

In addition to patents and patent applications, we depend upon trade secrets and proprietary know-how to protect our proprietary technology. We require our employees, consultants, advisors and collaborators to enter into confidentiality agreements that prohibit the disclosure of confidential information to any other parties. We require our employees and consultants to disclose and assign to us their ideas, developments, discoveries and inventions. These agreements may not, however, provide adequate protection for our trade secrets, know-how or other proprietary information in the event of any unauthorized use or disclosure.

Intellectual property rights of third parties could adversely affect our ability to commercialize our products and services, and we might be required to litigate or obtain licenses from third parties in order to develop or market our products. Such litigation or licenses could be costly or not available on commercially reasonable terms.

It is inherently difficult to conclusively assess our freedom to operate without infringing on third-party rights. Our competitive position may be adversely affected if existing patents or patents resulting from patent applications issued to third parties or other third-party intellectual property rights are held to cover our products or services or elements thereof, or our manufacturing or uses relevant to our development plans. In such cases, we may not be in a position to develop or commercialize products or services unless we successfully pursue litigation to nullify or invalidate the third-party intellectual property right concerned or enter into a license agreement with the intellectual property right holder, if available on commercially reasonable terms. There may also be pending patent applications that if they result in issued patents, could be alleged to be infringed by our new products or services. If such an infringement claim should be brought and be successful, we may be required to pay substantial damages, be forced to abandon our new products or services or seek a license from any patent holders. No assurances can be given that a license will be available on commercially reasonable terms, if at all.

It is also possible that we have failed to identify relevant third-party patents or applications. For example, certain U.S. patent applications that will not be filed outside the United States remain confidential until patents issue. Patent applications in the United States and elsewhere are published approximately 18 months after the earliest filing for which priority is claimed, with such earliest filing date being commonly referred to as the priority date. Therefore, patent applications covering our new products or services could have been filed by others without our knowledge. Additionally, pending patent applications can, subject to certain limitations, be later amended in a manner that could cover our services, our new products or the use of our new products. Third-party intellectual property right holders may also actively bring infringement claims against us. We cannot guarantee that we will be able to successfully settle or otherwise resolve such infringement claims. If we are unable to successfully settle future claims on terms acceptable to us, we may be required to engage in or continue costly, unpredictable and time-consuming litigation and may be prevented from or experience substantial delays in pursuing the development of and/or marketing our new products or services. If we fail in any such dispute, in addition to being forced to pay damages, we may be temporarily or permanently prohibited from commercializing our new products or services that are held to be infringing. We might, if possible, also be forced to redesign our new products so that we no longer infringe the third-party intellectual property rights. Any of these events, even if we were ultimately to prevail, could require us to divert substantial financial and management resources that we would otherwise be able to devote to our business.

Patent policy and rule changes could increase the uncertainties and costs surrounding the prosecution of our patent applications and the enforcement or defense of any issued patents.

Changes in either the patent laws or interpretation of the patent laws in the United States and other countries may diminish the value of any patents that may issue from our patent applications or narrow the scope of our patent protection. The laws of foreign countries may not protect our rights to the same extent as the laws of the United States. Publications of discoveries in the scientific literature often lag behind the actual discoveries, and patent applications in the United States and other jurisdictions are typically not published until 18 months after filing, or in some cases not at all. We therefore cannot be certain that we were the first to file the invention claimed in our owned and licensed patent or pending applications, or that we or our licensor were the first to file for patent protection of such inventions. Assuming all other requirements for patentability are met, in the United States prior to March 15, 2013, the first to make the claimed invention without undue delay in filing, is entitled to the patent, while generally outside the United States, the first to file a patent application is entitled to the patent. After March 15, 2013, under the Leahy-Smith America Invents Act, or the Leahy-Smith Act, enacted on September 16, 2011, the United States has moved to a first to file system. The Leahy-Smith Act also includes a number of significant changes that affect the way patent applications are prosecuted and also affect patent litigation. In general, the Leahy-Smith Act and its implementation could increase the uncertainties and costs surrounding the prosecution of our patent applications and the enforcement or defense of any issued patents, all of which could have a material adverse effect on our business and financial condition.

We may be involved in lawsuits to protect or enforce our intellectual property, which could be expensive, time consuming, and unsuccessful.

Competitors may infringe our intellectual property. If we were to initiate legal proceedings against a third-party to enforce a patent covering one of our products or services, the defendant could counterclaim that the patent covering our product is invalid and/or unenforceable. In patent litigation in the United States, defendant counterclaims alleging invalidity and/or unenforceability are commonplace. Grounds for a validity challenge could be an alleged failure to meet any of several statutory requirements, including lack of novelty, obviousness, or non-enablement. Grounds for an unenforceability assertion could be an allegation that someone connected with prosecution of the patent withheld relevant information from the USPTO or made a misleading statement, during prosecution. Under the Leahy-Smith Act, the validity of U.S. patents may also be challenged in post-grant and inter partes review proceedings before the USPTO. The outcome following legal assertions of invalidity and unenforceability is unpredictable.

Derivation and interference proceedings initiated by third parties or brought by us may be necessary to determine the priority and ownership of inventions and/or their scope with respect to our patent or patent applications or those of our licensors. An unfavorable outcome could require us to cease using the related technology or to attempt to license rights to it from the prevailing party. Our business could be harmed if the prevailing party does not offer us a license on commercially reasonable terms. Our defense of litigation or interference proceedings may fail and, even if successful, may result in substantial costs and distract our management and other employees. In addition, the uncertainties associated with litigation could have a material adverse effect on our ability to raise the funds necessary to continue our clinical trials, continue our research programs, license necessary technology from third parties, or enter into development partnerships that would help us bring our new products or services to market.

Furthermore, because of the substantial amount of discovery required in connection with intellectual property litigation, there is a risk that some of our confidential information could be compromised by disclosure during this type of litigation. There could also be public announcements of the results of hearings, motions, or other interim proceedings or developments. If securities analysts or investors perceive these results to be negative, it could have a material adverse effect on the price of our shares of common stock.

We may not be able to protect our intellectual property rights throughout the world.

A company may attempt to commercialize competing products utilizing our proprietary design, trademarks or tradenames in foreign countries where we do not have sufficient patent protection and where legal recourse may be limited. This may have a significant commercial impact on our foreign business operations.

Filing, prosecuting and defending patents or trademarks on our current and future products in all countries throughout the world would be prohibitively expensive. The requirements for patentability and trademarking may differ in certain countries, particularly developing countries. The laws of some foreign countries do not protect intellectual property rights to the same extent as laws in the United States. Consequently, we may not be able to prevent third parties from utilizing our inventions and trademarks in all countries outside the United States. Competitors may use our technologies or trademarks in jurisdictions where we have not obtained patent or trademark protection to develop or market their own products and further, may export otherwise infringing products to territories where we have patent and trademark protection, but enforcement on infringing activities is inadequate. These products or trademarks may compete with our products or trademarks, and our patents, trademarks or other intellectual property rights may not be effective or sufficient to prevent them from competing.

Many companies have encountered significant problems in protecting and defending intellectual property rights in foreign jurisdictions. The legal systems of certain countries, particularly certain developing countries, do not favor the enforcement of patents, trademarks and other intellectual property protection, which could make it difficult for us to stop the infringement of our patents and trademarks or marketing of competing products in violation of our proprietary rights generally. Proceedings to enforce our patent and trademarks rights in foreign jurisdictions could result in substantial costs and divert our efforts and attention from other aspects of our business, could put our patents and trademarks at risk of being invalidated or interpreted narrowly and our patent or trademark applications at risk, and could provoke third parties to assert claims against us. We may not prevail in any lawsuits that we initiate and the damages or other remedies awarded, if any, may not be commercially meaningful. In addition, certain countries in Europe and certain developing countries, including India and China, have compulsory licensing laws under which a patent owner may be compelled to grant licenses to third parties. In those countries, we may have limited remedies if our patents are infringed or if we are compelled to grant a license to our patents to a third party, which could materially diminish the value of those patents. This could limit our potential revenue opportunities. Accordingly, our efforts to enforce our intellectual property rights around the world may be inadequate to obtain a significant commercial advantage from the intellectual property that we own or license. Finally, our ability to protect and enforce our intellectual property rights may be adversely affected by unforeseen changes in foreign intellectual property laws.

Risks Related to Our Business Operations

We face risks associated with litigation and claims.

We have in the past and may, in the future, be involved in one or more lawsuits, claims or other proceedings arising in or outside the ordinary course of business that could negatively affect our business operations and financial condition. These suits could concern issues including contract disputes, employment actions, employee benefits, taxes, environmental, health and safety, fraud and abuse, personal injury, product liability matters and securities class actions, which are typically expensive to defend. Such claims and litigation proceedings may be brought by third parties, including our competitors, advisors, service providers, partners or collaborators, employees, and governmental or regulatory bodies. Any claims and lawsuits, and the disposition of such claims and lawsuits, could be time-consuming and expensive to resolve, divert management attention and resources, and lead to attempts on the part of other parties to pursue similar claims. We may not be able to determine the amount of any potential losses and other costs we may incur due to the inherent uncertainties of litigation and settlement negotiations. In the event we are required or decide to pay amounts in connection with any claims or lawsuits, such amounts could be significant and could have a material adverse impact on our liquidity, business, financial condition and results of operations. In addition, depending on the nature and timing of any such dispute, a resolution of a legal matter could materially affect our future operating results, our cash flows or both. Additionally, we may be unable to maintain our existing directors' and officers' liability insurance in the future at satisfactory rates or adequate coverage amounts and may incur significant increases in insurance costs.

Our business and operations would suffer in the event of computer system failures, cyber-attacks or deficiencies in our cyber-security.

In the ordinary course of our business, we collect and store sensitive data, including intellectual property, research data, our proprietary business information and that of our suppliers, technical information about our products, clinical trial plans and employee records. Similarly, our third-party providers possess certain of our sensitive data and confidential information. The secure maintenance of this information is critical to our operations and business strategy. Despite the implementation of security measures, our internal computer systems, and those of third parties on which we rely, are vulnerable to damage from computer viruses, malware, ransomware, cyber fraud, natural disasters, terrorism, war, telecommunication and electrical failures, cyber-attacks or cyber-intrusions over the Internet, attachments to emails, persons inside our organization, or persons with access to systems inside our organization. The risk of a security breach or disruption, particularly through cyber-attacks or cyber intrusion, including by computer hackers, foreign governments, and cyber terrorists, has generally increased as the number, intensity and sophistication of attempted attacks and intrusions from around the world have increased. Any such breach could compromise our networks and the information stored there could be accessed, publicly disclosed, encrypted, lost or stolen. Any such access, inappropriate disclosure of confidential or proprietary information or other loss of information, including our data being breached at third-party providers, could result in legal claims or proceedings, liability or financial loss under laws that protect the privacy of personal information, disruption of our operations or our product development programs and damage to our reputation, which could adversely affect our business. For example, the loss of clinical trial data from completed or ongoing or planned clinical trials could result in delays in our regulatory approval efforts and significantly increase our costs to recover or reproduce the data.

The loss of key members of our senior management team or our inability to attract and retain highly skilled scientists and laboratory and field personnel could adversely affect our business.

We depend on the skills, experience and performance of our senior management and research personnel. The efforts of each of these persons will be critical to us as we continue to further develop our products, increase sales and broaden our product offerings. If we were to lose one or more of these key employees, we may experience difficulties in competing effectively, developing our technologies and implementing our business strategies. Our research and development programs and commercial laboratory operations depend on our ability to attract and retain highly skilled scientists and technicians. We may not be able to attract or retain qualified scientists and technicians in the future due to the intense competition for qualified personnel among life science businesses. There can be no assurance that we will be able to attract and retain necessary personnel on acceptable terms given the intense competition among medical device, biotechnology, pharmaceutical and healthcare companies, universities and non-profit research institutions for experienced management, scientists, researchers, sales and marketing and manufacturing personnel. If we are unable to attract, retain and motivate our key personnel to accomplish our business objectives, we may experience constraints that will adversely affect our ability to support our operations, and our results of operations may be materially and adversely affected.

We are an international business, and we are exposed to various global and local risks that could have a material adverse effect on our financial condition and results of operations.

We operate globally and develop and market products in multiple countries. Consequently, we face complex legal and regulatory requirements in multiple jurisdictions, which may expose us to certain financial and other risks. In addition, we are subject to global events beyond our control, including war, public health crises, such as pandemics and epidemics, trade disputes and other international events. Any of these changes could have a material adverse effect on our reputation, business, financial condition or results of operations.

For example, in the past we have been impacted by the COVID-19 pandemic which has caused interruptions or delays of our business plan. If there is a renewed outbreak of COVID-19 it may result in restrictions and safety measures that could cause fluctuations in sales of our products, ability to manufacture, as well as potential disruptions to our supply chain.

International sales and operations are subject to a variety of risks, including:

- foreign currency exchange rate fluctuations;
- greater difficulty in staffing and managing foreign operations;
- greater risk of uncollectible accounts;
- longer collection cycles;
- logistical and communications challenges;

- potential adverse changes in laws and regulatory practices, including export license requirements, trade barriers, tariffs and tax laws;
- changes in labor conditions;
- burdens and costs of compliance with a variety of foreign laws;
- political and economic instability;
- the escalation of hostilities in Israel, which could impair our ability to manufacture our products;
- increases in duties and taxation;
- foreign tax laws and potential increased costs associated with overlapping tax structures;
- greater difficulty in protecting intellectual property;
- the risk of third party disputes over ownership of intellectual property and infringement of third party intellectual property by our products; and
- general economic and political conditions in these foreign markets.

International markets are also affected by economic pressure to contain reimbursement levels and healthcare costs. Profitability from international operations may be limited by risks and uncertainties related to regional economic conditions, regulatory and reimbursement approvals, competing products, infrastructure development, intellectual property rights protection and our ability to implement our overall business strategy. We expect these risks will increase as we pursue our strategy to expand operations into new geographic markets. We may not succeed in developing and implementing effective policies and strategies in each location where we conduct business. Any failure to do so may harm our business, results of operations and financial condition.

Our business, operating results and growth rates may be adversely affected by current or future unfavorable economic and market conditions and adverse developments with respect to financial institutions and associated liquidity risk.

Our business depends on the economic health of the global economies. If the conditions in the global economies remain uncertain or continue to be volatile, or if they deteriorate, including as a result of the impact of military conflict, such as the security situation in Israel and Russia and Ukraine, terrorism or other geopolitical events, our business, operating results and financial condition may be materially adversely affected. Economic weakness, inflation and increases in interest rates, limited availability of credit, liquidity shortages and constrained capital spending have at times in the past resulted, and may in the future result, in challenging and delayed sales cycles, slower adoption of new technologies and increased price competition, and could negatively affect our ability to forecast future periods, which could result in an inability to satisfy demand for our products and a loss of market share.

In addition, increases in inflation raise our costs for commodities, labor, materials and services and other costs required to grow and operate our business, and failure to secure these on reasonable terms may adversely impact our financial condition. Additionally, increases in inflation, geopolitical developments and global supply chain disruptions, have caused, and may in the future cause, global economic uncertainty and uncertainty about the interest rate environment, which may make it more difficult, costly or dilutive for us to secure additional financing. A failure to adequately respond to these risks could have a material adverse impact on our financial condition, results of operations or cash flows.

There can be no assurance that future credit and financial market instability and a deterioration in confidence in economic conditions will not occur. Our general business strategy may be adversely affected by any such economic downturn, liquidity shortages, volatile business environment or continued unpredictable and unstable market conditions. If the current equity and credit markets deteriorate, or if adverse developments are experienced by financial institutions, it may cause short-term liquidity risk and also make any necessary debt or equity financing more difficult, more costly, more onerous with respect to financial and operating covenants and more dilutive. Failure to secure any necessary financing in a timely manner and on favorable terms could have a material adverse effect on our growth strategy, financial performance and stock price and could require us to alter our operating plans. In addition, there is a risk that one or more of our service providers, financial institutions, manufacturers, suppliers and other partners may be adversely affected by the foregoing risks, which could directly affect our ability to attain our operating goals on schedule and on budget.

We are subject to financial reporting and other requirements that place significant demands on our resources.

We are subject to reporting and other obligations under the Securities Exchange Act of 1934, as amended, including the requirements of Section 404 of the Sarbanes-Oxley Act of 2002. Section 404 requires us to conduct an annual management assessment of the effectiveness of our internal controls over financial reporting. These reporting and other obligations place significant demands on our management, administrative, operational, internal audit and accounting resources. Any failure to maintain effective internal controls could have a material adverse effect on our business, operating results and stock price. Moreover, effective internal control is necessary for us to provide reliable financial reports and prevent fraud. If we cannot provide reliable financial reports or prevent fraud, we may not be able to manage our business as effectively as we would if an effective control environment existed, and our business and reputation with investors may be harmed.

There are inherent limitations in all control systems, and misstatements due to error or fraud may occur and not be detected.

The ongoing internal control provisions of Section 404 of the Sarbanes-Oxley Act of 2002 require us to identify material weaknesses in internal control over financial reporting, which is a process to provide reasonable assurance regarding the reliability of financial reporting for external purposes in accordance with accounting principles generally accepted in the United States. Our management, including our chief executive officer and chief financial officer, does not expect that our internal controls and disclosure controls will prevent all errors and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. In addition, the design of a control system must reflect the fact that there are resource constraints, and the benefit of controls must be relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, in our company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple errors or mistakes. Further, controls can be circumvented by individual acts of some persons, by collusion of two or more persons, or by management override of the controls. The design of any system of controls is also based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Over time, a control may be inadequate because of changes in conditions, such as growth of the company or increased transaction volume, or the degree of compliance with the policies or procedures may deteriorate. Because of inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

In addition, discovery and disclosure of a material weakness, by definition, could have a material adverse impact on our financial statements. Such an occurrence could discourage certain customers or suppliers from doing business with us and adversely affect how our stock trades. This could in turn negatively affect our ability to access equity markets for capital.

Scrutiny of sustainability and environmental, social, and governance (“ESG”) initiatives could increase our costs or otherwise adversely impact our business.

Public companies have recently faced scrutiny related to ESG practices and disclosures from certain investors, capital providers, shareholder advocacy groups, other market participants and other stakeholder groups. Such scrutiny may result in increased costs, enhanced compliance or disclosure obligations, or other adverse impacts on our business, financial condition or results of operations. If our ESG practices and reporting do not meet investor or other stakeholder expectations, we may be subject to investor or regulator engagement regarding such matters. Our failure to comply with any applicable ESG rules or regulations could lead to penalties and adversely impact our reputation, access to capital and employee retention. Such ESG matters may also impact our third-party contract manufacturers and other third parties on which we rely, which may augment or cause additional impacts on our business, financial condition, or results of operations.

Risks Related to Operating in Israel

We anticipate being subject to fluctuations in currency exchange rates because we expect a substantial portion of our revenues will be generated in Euros and U.S. dollars, while a significant portion of our expenses will be incurred in New Israeli Shekels (“NIS”).

We expect a substantial portion of our revenues will be generated in U.S. dollars and Euros, while a significant portion of our expenses, principally salaries and related personnel expenses, is paid in NIS. As a result, we are exposed to the risk that the rate of inflation in Israel will exceed the rate of devaluation of the NIS in relation to the Euro or the U.S. dollar, or that the timing of this devaluation will lag behind inflation in Israel. Because inflation has the effect of increasing the dollar and Euro costs of our operations, it would therefore have an adverse effect on our dollar-measured results of operations. The value of the NIS, against the Euro, the U.S. dollar, and other currencies may fluctuate and is affected by, among other things, changes in Israel’s political and economic conditions. Any significant revaluation of the NIS may materially and adversely affect our cash flows, revenues and financial condition. Fluctuations in the NIS exchange rate, or even the appearance of instability in such exchange rate, could adversely affect our ability to operate our business.

If there are significant shifts in the political, economic and military conditions in Israel and its neighbors, it could have a material adverse effect on our business relationships and profitability.

Our current manufacturing facility, certain of our key personnel and one of our offices are located in Israel. Our business is directly affected by the political, economic and military conditions in Israel and its neighbors. Since the establishment of the State of Israel in 1948, a number of armed conflicts have occurred between Israel and its Arab neighbors.

In October 2023, Hamas terrorists infiltrated Israel’s southern border from the Gaza Strip and conducted a series of attacks on civilian and military targets. Hamas also launched extensive rocket attacks on Israeli population and industrial centers located along Israel’s border with the Gaza Strip and in other areas within the State of Israel. These attacks resulted in extensive deaths, injuries and kidnapping of civilians and soldiers. Following the attack, Israel’s security cabinet declared war against Hamas and a military campaign against these terrorist organizations commenced in parallel to their continued rocket and terror attacks. On January 19, 2025, a temporary ceasefire went into effect, the result of which is uncertain.

In addition, since the commencement of these events, there have been continued hostilities along Israel’s northern border with Lebanon (with the Hezbollah terror organization) and on other fronts from various extremist groups in region, such as the Houthis in Yemen and various rebel militia groups in Syria and Iraq. In October 2024, Israel began limited ground operations against Hezbollah in Lebanon, and in November 2024, a ceasefire was brokered between Israel and Hezbollah. In addition, Iran recently launched direct attacks on Israel involving hundreds of drones and missiles and has threatened to continue to attack Israel and is widely believed to be developing nuclear weapons. Iran is also believed to have a strong influence among extremist groups in the region, such as Hamas in Gaza, Hezbollah in Lebanon, the Houthi movement in Yemen and various rebel militia groups in Syria and Iraq. These situations may potentially escalate in the future to more violent events which may affect Israel and us. Additionally, Yemeni rebel group, the Houthis, launched series of attacks on global shipping routes in the Red Sea, causing disruptions of supply chain. Such clashes may escalate in the future into a greater regional conflict.

In connection with the Israeli security cabinet’s declaration of war against Hamas and possible hostilities with other organizations, several hundred thousand Israeli military reservists were drafted to perform immediate military service, including five full time employees in Israel of ours. Although many of such military reservists have since been released, including all our employees, they may be called up for additional reserve duty, depending on developments in the war in Gaza and along Israel’s other borders. Military service call ups that result in absences of personnel from us for an extended period of time may materially and adversely affect our business, prospects, financial condition and results of operations. As of the date hereof, we currently have 67 full-time employees located in Israel.

Since the war broke out on October 7, 2023, our operations have not been adversely affected by this situation, and we have not experienced disruptions to our clinical studies. None of the clinical sites currently participating in our clinical studies are located in Israel; however, we currently manufacture our CGuard at our facility in Tel Aviv, Israel. If there were a disruption to our existing manufacturing facility or our ability to procure raw materials and ship our products, we would have no other means of manufacturing and distributing CGuard until we were able to restore the manufacturing and distribution capability at our facility or develop alternative manufacturing facilities and distribution capabilities.

The intensity and duration of Israel's current war is difficult to predict at this stage, as are such war's economic implications on the Company's business and operations and on Israel's economy in general. If the ceasefires declared collapse or a new war commences or hostilities expand to other fronts, our operations may be adversely affected.

Our commercial insurance does not cover losses that may occur as a result of events associated with war and terrorism. Although the Israeli government currently covers the reinstatement value of direct damages that are caused by terrorist attacks or acts of war, we cannot assure you that this government coverage will be maintained or that it will sufficiently cover our potential damages. Any losses or damages incurred by us could have a material adverse effect on our business. Any armed conflicts or political instability in the region would likely negatively affect business conditions and could harm our results of operations.

The continued political instability and hostilities between Israel and its neighbors and any future armed conflict, terrorist activity or political instability in the region could adversely affect our operations in Israel and adversely affect the market price of our shares of common stock. In addition, several organizations and countries may restrict doing business with Israel and Israeli companies have been and are today subjected to economic boycotts. The interruption or curtailment of trade between Israel and its present trading partners could adversely affect our business, financial condition and results of operations.

Finally, political conditions within Israel may affect our operations. Israel has held five general elections between 2019 and 2022, and prior to October 2023, the Israeli government pursued extensive changes to Israel's judicial system, which sparked extensive political debate and unrest. Actual or perceived political instability in Israel or any negative changes in the political environment, may individually or in the aggregate adversely affect the Israeli economy and, in turn, our business, financial condition, results of operations and growth prospects.

Under applicable U.S. and Israeli law, we may not be able to enforce covenants not to compete and therefore may be unable to prevent our competitors from benefiting from the expertise of some of our former employees. In addition, employees may be entitled to seek compensation for their inventions irrespective of their agreements with us, which in turn could impact our future profitability.

We generally enter into non-competition agreements with our employees and certain key consultants, or our employment and consulting agreements contain non-competition provisions. These agreements, to the extent they are in place and in effect, prohibit our employees and certain key consultants, if they cease working for us, from competing directly with us or working for our competitors or clients for a limited period of time. We may be unable to enforce these agreements under the laws of the jurisdictions in which our employees work and it may be difficult for us to restrict our competitors from benefitting from the expertise our former employees or consultants developed while working for us. For example, Israeli courts have required employers seeking to enforce non-compete undertakings of a former employee to demonstrate that the competitive activities of the former employee will harm one of a limited number of material interests of the employer which have been recognized by the courts, such as the secrecy of a company's confidential commercial information or the protection of its intellectual property. If we cannot demonstrate that such interests will be harmed, we may be unable to prevent our competitors from benefiting from the expertise of our former employees or consultants and our ability to remain competitive may be diminished.

We may become subject to claims for remuneration or royalties for assigned service invention rights by our employees, which could result in litigation and adversely affect our business.

A significant portion of our intellectual property has been developed by our Israeli employees in the course of their employment for us. Under the Israeli Patent Law, 5727-1967 (the “Israeli Patent Law”), inventions conceived by an employee during the term and as part of the scope of his or her employment with a company are regarded as “service inventions,” which belong to the employer, absent a specific agreement between the employee and employer giving the employee service invention rights. The Israeli Patent Law also provides that if there is no such agreement between an employer and an employee, the Israeli Compensation and Royalties Committee (the “C&R Committee”), a body constituted under the Israeli Patent Law, shall determine whether the employee is entitled to remuneration for his inventions. The C&R Committee (decisions of which have been upheld by the Israeli Supreme Court) has held that employees may be entitled to remuneration for their service inventions despite having specifically waived any such rights. We generally enter into intellectual property assignment agreements with our employees pursuant to which such employees assign to us all rights to any inventions created in the scope of their employment or engagement with us. Although our employees have agreed to assign to us service invention rights and have specifically waived their right to receive any special remuneration for such assignment beyond their regular salary and benefits, we may face claims demanding remuneration in consideration for assigned inventions. As a consequence of such claims, we could be required to pay additional remuneration or royalties to our current or former employees, or be forced to litigate such claims, which could negatively affect our business.

It may be difficult for investors in the United States to enforce any judgments obtained against us or some of our directors or officers.

The majority of our assets other than cash are located outside the U.S. In addition, certain of our officers are nationals and/or residents of countries other than the U.S., and all or a substantial portion of such persons’ assets are located outside the U.S. As a result, it may be difficult for investors to enforce within the United States any judgments obtained against us or any of our non-U.S. officers, including judgments predicated upon the civil liability provisions of the securities laws of the U.S. or any state thereof. Additionally, it may be difficult to assert U.S. securities law claims in actions originally instituted outside of the U.S. Israeli courts may refuse to hear a U.S. securities law claim because Israeli courts may not be the most appropriate forums in which to bring such a claim. Even if an Israeli court agrees to hear a claim, it may determine that the Israeli law, and not U.S. law, is applicable to the claim. Further, if U.S. law is found to be applicable, certain content of applicable U.S. law must be proved as a fact, which can be a time-consuming and costly process, and certain matters of procedure would still be governed by the Israeli law. Consequently, you may be effectively prevented from pursuing remedies under U.S. federal and state securities laws against us or any of our non-U.S. directors or officers.

Risks Related to Our Common Stock, Preferred Stock and Warrants

The market prices of our common stock are subject to fluctuation and have been and may continue to be volatile, which could result in substantial losses for investors.

The market prices of our common stock have been and are likely to continue to be highly volatile and could fluctuate widely in response to various factors, many of which are beyond our control, including the following:

- technological innovations or new products and services by us or our competitors;
- additions or departures of key personnel;
- our ability to execute our business plan;
- operating results that fall below expectations;
- loss of any strategic relationship;
- industry developments;
- economic, political and other external factors; and
- period-to-period fluctuations in our financial results.

In addition, the securities markets have from time to time experienced significant price and volume fluctuations that are unrelated to the operating performance of particular companies. These market fluctuations may also significantly affect the market prices of our common stock.

Our common stock could be delisted from the Nasdaq Capital Market if we fail to meet the Nasdaq Capital Market's stockholders' equity continued listing standards. Our ability to publicly or privately sell equity securities and the liquidity of our common stock could be adversely affected if we are delisted from the Nasdaq Capital Market.

Our common stock is listed on the Nasdaq Capital Market, and we are therefore subject to its continued listing requirements, including requirements with respect to the market value of publicly-held shares, market value of listed shares, minimum bid price per share, and minimum stockholders' equity, among others, and requirements relating to board and committee independence. If we fail to satisfy one or more of the requirements, we may be delisted from the Nasdaq Capital Market.

Delisting from the Nasdaq Capital Market may adversely affect our ability to raise additional financing through the public or private sale of equity securities, may significantly affect the ability of investors to trade our securities and may negatively affect the value and liquidity of our common stock. Delisting also could have other negative results, including the potential loss of employee confidence, the loss of institutional investors or interest in business development opportunities.

Delaware law and our corporate charter and bylaws contain anti-takeover provisions that could delay or discourage takeover attempts that stockholders may consider favorable.

Our board of directors is authorized to issue shares of preferred stock in one or more series and to fix the voting powers, preferences and other rights and limitations of the preferred stock. Accordingly, we may issue shares of preferred stock with a preference over our common stock with respect to dividends or distributions on liquidation or dissolution, or that may otherwise adversely affect the voting or other rights of the holders of common stock. Issuances of preferred stock, depending upon the rights, preferences and designations of the preferred stock, may have the effect of delaying, deterring or preventing a change of control, even if that change of control might benefit our stockholders. In addition, we are subject to Section 203 of the Delaware General Corporation Law. Section 203 generally prohibits a public Delaware corporation from engaging in a "business combination" with an "interested stockholder" for a period of three years after the date of the transaction in which the person became an interested stockholder, unless (i) prior to the date of the transaction, the board of directors of the corporation approved either the business combination or the transaction which resulted in the stockholder becoming an interested stockholder; (ii) the interested stockholder owned at least 85% of the voting stock of the corporation outstanding at the time the transaction commenced, excluding for purposes of determining the number of shares outstanding (a) shares owned by persons who are directors and also officers and (b) shares owned by employee stock plans in which employee participants do not have the right to determine confidentially whether shares held subject to the plan will be tendered in a tender or exchange offer; or (iii) on or subsequent to the date of the transaction, the business combination is approved by the board and authorized at an annual or special meeting of stockholders, and not by written consent, by the affirmative vote of at least 66, 2/3%, of the outstanding voting stock which is not owned by the interested stockholder.

Section 203 could delay or prohibit mergers or other takeover or change in control attempts with respect to us and, accordingly, may discourage attempts to acquire us even though such a transaction may offer our stockholders the opportunity to sell their stock at a price above the prevailing market price.

We have a staggered board of directors, which could impede an attempt to acquire us or remove our management.

Our board of directors is divided into three classes, each of which serves for a staggered term of three years. This division of our board of directors could have the effect of impeding an attempt to take over our company or change or remove management, since only one class will be elected annually. Thus, only approximately one-third of the existing board of directors could be replaced at any election of directors.

As a former shell company, resales of shares of our restricted common stock in reliance on Rule 144 of the Securities Act are subject to the requirements of Rule 144(i).

We previously were a “shell company” and, as such, sales of our securities pursuant to Rule 144 under the Securities Act of 1933, as amended, cannot be made unless, among other things, at the time of a proposed sale, we are subject to the reporting requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, as amended, and have filed all reports and other materials required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 as amended, as applicable, during the preceding 12 months, other than Form 8-K reports. Because, as a former shell company, the reporting requirements of Rule 144(i) will apply regardless of holding period, restrictive legends on certificates for shares of our common stock cannot be removed except in connection with an actual sale that is subject to an effective registration statement under, or an applicable exemption from the registration requirements of, the Securities Act of 1933, as amended. Because our unregistered securities cannot be sold pursuant to Rule 144 unless we continue to meet such requirements, any unregistered securities we issue will have limited liquidity unless we continue to comply with such requirements.

If securities and/or industry analysts fail to continue publishing research about our business, if they change their recommendations adversely or if our results of operations do not meet their expectations, our stock price and trading volume could decline.

The trading market for our common stock will be influenced by the research and reports that industry or securities analysts publish about us or our business. If one or more of these analysts cease coverage of our company or fail to publish reports on us regularly, we could lose visibility in the financial markets, which in turn could cause our stock price or trading volume to decline. In addition, it is likely that in some future period our operating results will be below the expectations of securities analysts or investors. If one or more of the analysts who cover us downgrade our stock, or if our results of operations do not meet their expectations, our stock price could decline.

Aspects of the tax treatment of the securities may be uncertain.

The tax treatment of our preferred stock and our warrants is uncertain and may vary depending upon whether you are an individual or a legal entity and whether or not you are domiciled in the United States. In the event you are a non-U.S. investor, you should consult your tax advisors as to the consequences, under the tax laws of the country where you are resident for tax purposes, of acquiring, holding and disposing of our preferred stock and our warrants.

Item 1B. Unresolved Staff Comments.

Not applicable.

Item 1C. Cybersecurity

Risk management and strategy

We have developed and maintain a cybersecurity risk management program that focuses primarily on securing and safeguarding computer systems, networks, cloud services, business applications, and data and that is integrated in our overall risk management strategy and framework. We have implemented protocols to protect against cyber threats and ensure the containment and security of sensitive business data, including ongoing security reviews of critical systems, continuous monitoring of event data, and employee training programs, which processes are aligned with our overall business and operational goals and strategies. Our risk assessment occurs on an ongoing basis and covers identification of risks that could act against the company’s objectives as well as specific risks related to a compromise to the security of data.

We engage a third-party to provide operational support for cybersecurity risks. This forms a critical part of our risk management strategy, facilitating effective management and mitigation of risks, and ensuring adherence to applicable regulatory and industry standards.

Overall, we believe that we have established a robust framework for confidentiality, integrity, and availability of information, adhering to relevant security standards, practices, and compliance requirements. In addition, we maintain insurance to help protect against risks associated with cybersecurity threats. As of the date of this report, we do not believe that any risks from cybersecurity threats have materially affected, or are reasonably likely to materially affect, us, including our business strategy, results of operations, or financial condition. However, despite our efforts, we cannot eliminate all risks from cybersecurity threats, or provide assurances that we have not experienced an undetected cybersecurity incident. For more information about these risks, please see “Item 1.A – Risk Factors – Risks Related to Our Business Operations – Our business and operations would suffer in the event of computer system failures, cyber-attacks or deficiencies in our cyber-security.” in this Form 10-K.

Governance

Our board of directors provides oversight of our cybersecurity program and helps guide our strategy for managing cybersecurity risks in the context of our overall risk management system. Our cybersecurity program is managed by our Executive Vice President of Finance and Regional Manager, our internal IT team and our external Chief Information Security Officer (“CISO”) whose is responsible for leading enterprise-wide cybersecurity strategy, protocols, framework, standards and processes. The Executive Vice President of Finance and Regional Manager reports to our board of directors, as well as our Chief Executive Officer and Chief Financial Officer and other members of senior management as appropriate.

Item 2. Properties.

In October 2024, we established our global headquarters in Miami, Florida, where we lease approximately 10,782 square feet for general office space, with onsite shipping and receiving of products, in Suites 215 and 280 of the 6303 Waterford at Blue Lagoon building located at 6303 Waterford District Drive, Miami, Florida 33126. The lease rent commences on the date that the landlord delivers the entire premises to us with (i) the landlord’s completion of the construction of Suite 280 and (ii) the construction of Suite 215 being substantially complete (the “Commencement Date”). The lease has a term of 64 months from the Commencement Date (the “Term”), subject to a five-year extension in accordance with the terms of the lease. Pursuant to the lease, we paid the landlord a security deposit of \$500,000. Provided that there are no events of default by us under the lease, the security deposit will be returned to us on an incremental basis throughout the Term. Pursuant to the lease, we have agreed to pay base rent of \$22,911.75 per month during the first year of the Term, increasing on an incremental basis each subsequent year of the Term, as well as traditional lease expenses including, certain taxes, operating expenses and utilities.

We continue to maintain premises in Tel Aviv, Israel, where we lease a 1,700 square meter office and manufacturing facility that has the capacity to manufacture and assemble 2,000 stents per month, based upon the production schedule of one shift per day. We believe that our current facility is sufficient to meet anticipated future demand by adding personnel to the current staff. Additionally, we can add a working shift to our current production schedule.

Item 3. Legal Proceedings.

From time to time, we may become involved in various lawsuits and legal proceedings, which arise in the ordinary course of business. Litigation is subject to inherent uncertainties, and an adverse result in these or other matters may arise from time to time that may harm our business. There are currently no pending material legal proceedings, and we are currently not aware of any legal proceedings or claims against us or our property that we believe will have any significant effect on our business, financial position or operating results.

Item 4. Mine Safety Disclosures.

Not applicable.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

Market Information

Our common stock has been quoted on the Nasdaq Capital Market ("Nasdaq") since May 21, 2021, under the symbol "NSPR." The last reported sales price of our common stock on the Nasdaq on March 10, 2025, was \$2.82 per share.

Record Holders

As of March 12, 2025, we had 293 stockholders of record of our common stock. This figure includes an indeterminate number of stockholders who hold their shares in "street name."

Dividends

In the past, we have not declared or paid cash dividends on our common stock. We do not intend to pay cash dividends in the future; rather, we intend to retain future earnings, if any, to fund the operation and expansion of our business and for general corporate purposes.

The holders of Series C Preferred Stock are not entitled to receive any dividends, unless and until specifically declared by our board of directors. However, holders of our Series C Preferred Stock are entitled to receive dividends on shares of Series C Preferred Stock equal (on an as-if-converted-to-common-stock basis, and without giving effect for such purposes to the 4.99% or 9.99% beneficial ownership limitation, as applicable) to and in the same form as dividends actually paid on shares of the common stock when such dividends are specifically declared by our board of directors. We are not obligated to redeem or repurchase any shares of Series C Preferred Stock. Shares of Series C Preferred Stock are not otherwise entitled to any redemption rights, or mandatory sinking fund or analogous fund provision.

Item 6. [Reserved]

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

The following discussion and analysis of our financial condition and results of operations should be read in conjunction with the accompanying consolidated financial statements and related notes included elsewhere in this Annual Report on Form 10-K.

Overview

We are a medical device company focusing on the development and commercialization of products for the treatment of carotid artery disease and other vascular disease, including our proprietary CGuard™ stent platform. A stent is an expandable scaffold-like device, usually constructed of a metallic material, that is inserted into the lumen of an artery to create patency and improved blood flow. A sleeve of MicroNet™ mesh is attached over a stent to provide embolic protection both during and after stenting procedures.

Our CGuard EPS combines MicroNet and a unique self-expandable nitinol stent in a single device for use in carotid artery revascularization. Our CGuard EPS originally received CE mark approval under the MDD in the EU in March 2013 and was fully launched in Europe in September 2015. Subsequently, we launched CGuard EPS in over 30 countries and on February 3, 2021, we executed a distribution agreement with Chinese partners for the purpose of expanding our presence in the Asian markets. In January 2024, we received CE mark recertification under the EU's Medical Device Regulation regulatory framework. Currently, we are seeking strategic partners for a potential launch of CGuard EPS in Japan and other Asian countries.

On September 8, 2020, we received approval from the FDA of our IDE, thereby allowing us to proceed with a pivotal study of our CGuard™ Carotid Stent System, C-GUARDIANS, for prevention of stroke in patients in the United States. C-GUARDIANS is a prospective, multicenter, single-arm, pivotal study to evaluate the safety and efficacy of the CGuard™ Carotid Stent System when used to treat symptomatic and asymptomatic carotid artery stenosis in patients undergoing CAS. The study, which completed enrollment in June 2023, enrolled 316 patients across 24 trial sites in the U.S. and Europe and from April 2023 included deployment of the CGuard stent using CGuard Prime, our next generation CAS stent platform.

The primary endpoint was a composite of: (1) incidence of major adverse events including Death (all-cause mortality), any Stroke, and Myocardial Infarction (DSMI) through 30-days post index procedure, or (2) ipsilateral stroke from day 31 to day 365 post-procedure. All events were adjudicated by an independent clinical events committee. The composite index was compared to a performance goal based on the observed rate of the two components of the primary endpoint from previous pivotal stent trials which are considered industry standard. The performance goal was considered met if the upper bound of the two-sided 95% confidence interval calculated from the observed primary endpoint rate is < 11.6% and the p-value is less than 0.025.

In November 2023, we announced positive 30-day follow up results from the C-GUARDIANS trial in which stenting with the C-Guard Carotid Stent System in patients with carotid artery stenosis and at high risk for carotid endarterectomy had a DSMI rate of 0.95%, measured from the date of the procedure through 30 days follow-up post-procedure. In May 2024, we announced positive one-year follow up results from the C-GUARDIANS trial, with a rate of 30-day DSMI and ipsilateral stroke between 31 and 365 days of 1.95%

These data were used to that may support the PMA submission in September 2024 with a view to potential FDA approval of the CGuard Prime carotid stent system in the first half of 2025.

In October 2024, the FDA approved the Company's IDE to initiate the CGUARDIANS II pivotal study of its CGuard Prime 80cm Carotid Stent System during transcatheter revascularization (TCAR) procedures.

We continue to invest in current and future potential new indications, products and manufacturing enhancements for CGuard that are expected to reduce cost of goods and/or provide the best-in-class performing delivery systems, such as CGuard Prime. In furtherance of our strategy that focuses on establishing the CGuard Carotid Stent System as a viable alternative to vascular surgery, we are developing a new transcatheter artery revascularization (TCAR) delivery system, SwitchGuard NPS, for transcatheter access and neuro protection. In addition, we intend to explore new indications for CGuard to leverage the advantages of stent design and mesh protection, well suited in labels such as acute stroke with tandem lesions.

We consider our current addressable market for our CGuard Carotid Stent System and SwitchGuard NPS to be both symptomatic and asymptomatic individuals with diagnosed high-grade carotid artery stenosis) for whom intervention is preferable to medical (drug) therapy. This group includes not only carotid artery stenting patients but also individuals undergoing carotid endarterectomy, as the two approaches compete for the same patient population. Assuming full penetration of the intervention caseload by CGuard Carotid Stent System, we estimate that the addressable market for CGuard Carotid Stent System and SwitchGuard NPS is approximately \$1.3 billion (source: Health Research International Personal Medical Systems, Inc. September 13, 2021 Results of Update Report on Global Carotid Stenting Procedures and Markets by Major Geography and Addressable Markets and internal estimates). According to this same report and internal estimates, assuming full penetration of treatment for all individuals diagnosed with high-grade carotid artery stenosis, we estimate the total available market for CGuard Carotid Stent System and SwitchGuard NPS to be approximately \$9.3 billion, which may grow over time if expanded treatment options such as CGuard Carotid Stent System and SwitchGuard NPS lead to increased patient screening for carotid artery disease.

Recent Developments

Private Placement

On May 12, 2023, we entered into a securities purchase agreement (the "Purchase Agreement pursuant to which we agreed to sell and issue in a private placement (the "Private Placement Offering) an aggregate of 10,266,270 shares (the "Private Placement Shares") of our common stock, pre-funded warrants (the "Pre-Funded Warrants") to purchase up to 15,561,894 shares of common stock and warrants to purchase up to an aggregate of 51,656,328 shares of common stock, consisting of Series H warrants to purchase up to 12,914,086 shares of common stock (the "Series H Warrants"), Series I warrants to purchase up to 12,914,078 shares of common stock (the "Series I Warrants"), Series J warrants to purchase up to 12,914,086 shares of Common Stock (the "Series J Warrants") and Series K warrants to purchase up to 12,914,078 shares of common stock (the "Series K Warrants" and together with the Series H Warrants, Series I Warrants and Series J Warrants, the "Warrants"), at an offering price of \$1.6327 per Private Placement Share and associated Warrants and an offering price of \$1.6326 per Pre-Funded Warrant and associated Warrants.

The Pre-Funded Warrants will be immediately exercisable at an exercise price of \$0.0001 per share and will not expire until exercised in full. The Warrants will be immediately exercisable upon issuance at an exercise price of \$1.3827 per share, subject to adjustment as set forth therein. The Warrants have a term of the earlier of (i) five years from the date of issuance and (ii) (A) in the case of the Series H Warrants, 20 trading days following the Company's public release of primary and secondary end points related to one year follow up study results from the Company's C-GUARDIANS pivotal trial, (B) in the case of the Series I Warrants, 20 trading days following the Company's announcement of receipt of Premarket Approval from the Food and Drug Administration ("FDA") for the CGuard Prime Carotid Stent System (135 cm), (C) in the case of the Series J Warrants, 20 trading days following the Company's announcement of receipt of FDA approval for the SwitchGuard and CGuard Prime 80 and (D) in the case on the Series K Warrants, 20 trading days following the end of the fourth fiscal quarter after the fiscal quarter in which the first commercial sales of the CGuard Carotid Stent System in the United States begins.

The Warrants may be exercised on a cashless basis if there is no effective registration statement registering the shares underlying the Warrants. Under the terms of the Pre-Funded Warrants and Warrants, certain of the selling stockholders may not exercise the Pre-Funded Warrants or Warrants to the extent such exercise would cause such selling stockholder, together with its affiliates and attribution parties, to beneficially own a number of shares of common stock which would exceed 4.99% or 9.99% of our then outstanding common stock following such exercise, excluding for purposes of such determination common stock issuable upon exercise of the Pre-Funded Warrants or Warrants which have not been exercised. The Warrants may be exercised into pre-funded warrants if the selling stockholder is unable to exercise the Warrant due to the foregoing beneficial ownership limitation or at the selling shareholder's election.

Following the announcement of the one year follow up study results from the Company's C-GUARDIANS trial, Series H Warrants to purchase 12,914,086 shares of common stock were exercised in full into 292,996 of shares of common stock and pre-funded warrants to purchase 12,621,090 shares of common stock. The net proceeds to the Company from the exercise of the Series H Warrants were \$16.9 million, after deducting placement agent fees. The Series H warrants, each exercisable at \$1.3827 per common share and \$1.3826 per pre-funded warrant, were issued as part of the private placement financing that the Company consummated on May 15, 2023. In connection with the exercise of the Series H Warrants, we also paid LifeSci Capital LLC, a placement fee equal to 5.6% of the aggregate gross proceeds from such exercise, or approximately \$1.0 million.

Critical Accounting Policies

We prepared our consolidated financial statements in accordance with U.S. Generally Accepted Accounting Principles ("U.S. GAAP"). U.S. GAAP represents a comprehensive set of accounting and disclosure rules and requirements, and applying these rules and requirements requires management judgments and estimates including, in certain circumstances, choices between acceptable U.S. GAAP alternatives. The following is a discussion of our most critical accounting policies, judgments and uncertainties that are inherent in our application of U.S. GAAP.

Use of estimates

As applicable to these consolidated financial statements, the most significant estimates and assumptions relate to the determination of the lease terms in operating leases.

Leases

Operating leases are included in operating lease right-of-use (“ROU”) assets, Accounts payable and accruals - Other, and operating lease liabilities. ROU assets represent Company’s right to use an underlying asset for the lease term and lease liabilities represent obligation to make lease payments arising from the lease. Operating lease ROU assets and liabilities are recognized at the lease commencement date based on the present value of lease payments over the lease term. In determining the present value of lease payments, we use the incremental borrowing rate based on the information available at the lease commencement date as the rate implicit in the lease is not readily determinable. The determination of the incremental borrowing rate requires management judgment based on information available at lease commencement. The lease terms may include periods covered by options to extend the lease when it is reasonably certain that we will exercise such options, and periods covered by options to terminate the lease when it is reasonably certain that we will not exercise such options. Operating lease cost is recognized on a straight-line basis over the lease term. Lease agreements that include lease and non-lease components are accounted for as a single lease component. The Company elected the short-term lease recognition exemption for leases with a lease term of 12 months or less.

Results of Operations

Twelve months ended December 31, 2024 compared to the twelve months ended December 31, 2023

Revenues. For the twelve months ended December 31, 2024, revenue increased by \$804,000, or 13.0%, to \$7,009,000, from \$6,205,000 during the twelve months ended December 31, 2023. This increase was predominantly driven by growth in existing and new markets.

With respect to regions, the increase in revenue was primarily attributable to a \$772,000 increase in Europe, a \$141,000 increase in Asia and a \$14,000 increase in the Middle East. This growth was mainly due to growth in existing and new markets. This increase was offset by a \$103,000 decline in clinical revenue in the U.S . mainly driven by the completion in June 2023 of the enrollment of patients in our CGuardians IDE clinical trial as well as a \$20,000 decline in other markets.

Gross Profit. For the twelve months ended December 31, 2024, gross profit (revenue less cost of revenues) decreased by 16.7%, or \$301,000, to \$1,506,000, compared to a gross profit of \$1,807,000 for the same period in 2023. This decrease in gross profit resulted from an increase in cost of goods sold of \$1,105,000. This increase was primarily due to an \$891,000 increase in material and labor costs, driven mainly from higher sales volume, and increased compensation expense for new and current employees. In addition, there were an additional \$214,000 other cost of goods sold related expenses. The increase of cost of goods sold was offset by the increase in revenues of \$804,000 as described above. Gross margin (gross profits as a percentage of revenue) decreased to 21.5% during the year ended December 31, 2024, from 29.1% during the year ended December 31, 2023, driven by the factors mentioned above.

Research and Development Expenses. For the twelve months ended December 31, 2024, research and development expenses increased by 70.8%, or \$5,653,000, to \$13,634,000, from \$7,981,000 during the twelve months ended December 31, 2023. This increase resulted primarily from an increase in compensation expenses of \$2,705,000, mainly due to an increase of share-based compensation-related expenses and due to hiring personnel in connection with our expansion plans in the United States, an increase of \$1,379,000 of SwitchGuard NPS development and regulatory cost, \$961,000 related to clinical trials for CGuardians II and CGuardians III, an increase of \$914,000 related to CGuard Prime product preparation expenses for the anticipated U.S. commercial launch of CGuard Prime, an increase of \$448,000 related to an early feasibility study of CGuard Prime for the treatment of acute stroke patients with tandem lesions, an increase of \$239,000 related to the establishment of operations in the United States and an increase of \$71,000 in miscellaneous expenses. These increases were offset by a decrease of \$1,064,000 in expenses associated with the C-Guardians FDA Study as the one-year follow-up finalized in the second quarter of 2024 and the submission this quarter of the PMA application to the U.S. FDA.

Selling and Marketing Expenses. For the twelve months ended December 31, 2024, selling and marketing expenses increased by 57.0%, or \$2,204,000 to \$6,069,000, from \$3,865,000 during the twelve months ended December 31, 2023. This increase resulted primarily from an increase in compensation expenses of \$1,870,000 as we build our commercial sales force in the United States in anticipation for FDA approval, an increase of \$254,000 of promotional activities and an increase of \$80,000 in miscellaneous expenses.

General and Administrative Expenses. For the twelve months ended December 31, 2024, general and administrative expenses increased by 37.8%, or \$4,202,000, to \$15,306,000, from \$11,104,000 during the twelve months ended December 31, 2023. The increase was primarily driven by a \$3,113,000 increase in share-based compensation expenses, a \$877,000 increase in salary expenses and related accruals (mainly due to expected severance payments accrued for following the CFO's announced retirement, new hires for our Miami headquarters, and salary increases), and a \$284,000 increase in employee headhunting fees. These increases were offset by a \$72,000 decrease in miscellaneous expenses.

Financial Income, net. For the twelve months ended December 31, 2024, financial income increased by \$265,000, to \$1,557,000 from \$1,292,000 during the twelve months ended December 31, 2023. The increase in financial income primarily resulted from a \$293,000 increase in interest income from investment in marketable securities, money market funds and short-term bank deposits.

Tax Expenses. For the twelve months ended December 31, 2024, tax decreased by \$6,000 compared to the twelve months ended December 31, 2023. Our expenses for income taxes reflect primarily the tax liability due to potential tax exposure.

Net Loss. Our net loss increased by \$12,089,000, or 60.7%, to \$32,005,000 for the twelve months ended December 31, 2023, from \$19,916,000 during the twelve months ended December 31, 2023. The increase in net loss resulted primarily from an increase of \$12,059,000 in operating expenses.

Liquidity and Capital Resources

We had an accumulated deficit as of December 31, 2024, of \$254 million, as well as a net loss of \$32.0 million and negative operating cash flows. We expect to continue incurring losses and negative cash flows from operations until our product, CGuard EPS, reaches commercial profitability. As a result of these expected losses and negative cash flows from operations, along with our current cash position, we believe we do not have sufficient resources to fund operations for at least the next 12 months. Therefore, there is substantial doubt about our ability to continue as a going concern.

Our plans include continued commercialization of our products and raising capital through sale of additional equity securities, debt or capital inflows from strategic partnerships and exercise of warrants. There are no assurances, however, that we will be successful in obtaining the level of financing needed for our operations. If we are unsuccessful in commercializing our products or raising capital, we may need to reduce activities, curtail or cease operations.

In May 2023, we closed a Private Placement Offering that resulted in aggregate gross proceeds of approximately \$42.2 million, before deducting fees payable to the placement agent and other offering expenses payable by the Company. If the Warrants from the Private Placement Offering are exercised in cash in full this would result in an additional \$71.4 million of gross proceeds. There can be no assurance that we will achieve any of the milestones set forth in the Warrants or that the Warrants will be exercised in cash in full.

Following the announcement of the one year follow up study results from the Company's C-GUARDIANS trial, Series H Warrants to purchase 12,914,086 shares of common stock were exercised in full into 292,996 of shares of common stock and pre-funded warrants to purchase 12,621,090 shares of common stock. The net proceeds to the Company from the exercise of the Series H Warrants were \$16.9 million after deducting placement agent fees. The Series H warrants, each exercisable at \$1.3827 per common share and \$1.3826 per pre-funded warrant, were issued as part of the private placement financing that the Company consummated on May 15, 2023.

In May 2024, we entered into an Equity Distribution Agreement (the "Distribution Agreement") with Piper Sandler & Co., as sales agent ("Piper Sandler"), pursuant to which we may offer and sell from time to time, at our option, through or to Piper Sandler shares of our common stock having an aggregate offering price of up to \$17 million (the "ATM Facility"). We will pay Piper Sandler a commission at a fixed rate of 3.0% of the aggregate gross proceeds from each sale of the shares under the Distribution Agreement. As of the date hereof, we sold 845,399 shares pursuant to the Distribution Agreement for aggregate gross proceeds of approximately \$2,199,395.

Twelve months ended December 31, 2024 compared to the twelve months ended December 31, 2023

General. At December 31, 2024, we had cash and cash equivalents of \$18,916,000 and marketable securities of \$15,721,000 as compared to \$9,640,000 of cash and cash equivalents and \$29,383,000 marketable securities as of December 31, 2023. We have historically met our cash needs through a combination of issuing new shares, borrowing activities and product sales. Our cash requirements are generally for research and development, marketing and sales activities, finance and administrative cost, capital expenditures and general working capital.

For the twelve months ended December 31, 2024, net cash used in our operating activities increased by \$5,492,000 to \$21,868,000, from \$16,376,000 during the same period in 2023. The primary reason for the increase in cash used in our operating activities was an increase of \$4,409,000 in payments for third party related expenses and for professional services, an increase of \$2,518,000 in salary and bonus payments from \$9,495,000 in the twelve months ended December 31, 2023 to \$12,013,000 during the same period in 2024, offset, in part, by an increase of \$1,746,000 in payments received from customers to \$7,216,000 during the twelve months ended December 31, 2024, from \$5,470,000 during the same period in 2023 and an decrease of \$311,000 in interest income received from marketable securities and money market funds.

Cash provided by our investing activities was \$12,641,000 during the twelve months ended December 31, 2024, compared to cash used by our investing activities of \$16,092,000 during the twelve months ended December 31, 2023. The primary reason for the increase in cash provided by our investing activities is proceeds from matured marketable securities, net of withdrawal of \$43,200,000, offset by a decrease in withdrawal from short-term bank deposits, net of investment in short-term deposits, of \$13,000,000, an increase in an investment in long-term lease deposits of \$426,000 and an increase of \$1,021,000 in payments made for purchase of property, plant and equipment during the twelve months ended December 31, 2024.

Cash provided by financing activities for the twelve months December 31, 2024, was \$18,452,000. The principal source of the cash provided by financing activities during the twelve months ended December 31, 2024 were the proceeds from exercise of warrants of \$16,854,000 net of issuance costs and funds received from our ATM Facility that resulted in approximately \$1,598,000 of aggregate net proceeds. Cash provided by financing activities for the twelve months ended December 31, 2023, was \$37,534,000. The principal source of the cash provided by financing activities during the twelve months ended December 31, 2023, were the proceeds from the Private Placement Offering in May 2023.

Contractual Obligations

Operating lease payments represent our commitment for future rent made under non-cancelable lease for our offices in the U.S. and Israel. The total future payments for our operating lease obligation at December 31, 2024 were approximately \$2,939,000. For additional details regarding our lease, see Note 7 to our consolidated financial statements included in this Annual Report on Form 10-K.

Off Balance Sheet Arrangements

We have no off-balance sheet transactions, arrangements, obligations (including contingent obligations), or other relationships with unconsolidated entities or other persons that have, or may have, a material effect on our financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

Factors That May Affect Future Operations

We believe that our future operating results will continue to be subject to quarterly variations based upon a wide variety of factors, including the cyclical nature of the ordering patterns of our distributors, timing of regulatory approvals, the implementation of various phases of our clinical trials and manufacturing efficiencies due to the learning curve of utilizing new materials and equipment. Our operating results could also be impacted by a weakening of the Euro and strengthening of the NIS, both against the U.S. dollar. Lastly, other economic conditions we cannot foresee may affect customer demand, such as individual country reimbursement policies pertaining to our products.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk.

Not applicable.

Item 8. Financial Statements and Supplementary Data.

The following financial statements are included as part of this Report (See Item 15):

- [Report of Kesselman & Kesselman, Independent Registered Public Accounting Firm](#) (PCAOB name: Kesselman & Kesselman C.P.A.s and PCAOB ID: 1309)
- [Consolidated Balance Sheets as of December 31, 2024 and 2023](#)
- [Consolidated Statements of Operations for the Years Ended December 31, 2024 and 2023](#)
- [Consolidated Statements of Changes in Equity for the Years Ended December 31, 2024 and 2023](#)
- [Consolidated Statements of Cash Flows for the Years Ended December 31, 2024 and 2023](#)
- [Notes to Consolidated Financial Statements](#)

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

Not applicable.

Item 9A. Controls and Procedures.

Management's Conclusions Regarding Effectiveness of Disclosure Controls and Procedures

We conducted an evaluation of the effectiveness of our “disclosure controls and procedures”, as defined by Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended, as of December 31, 2024, the end of the period covered by this Annual Report on Form 10-K. The disclosure controls and procedures evaluation was done under the supervision and with the participation of management, including our chief executive officer and chief financial officer. There are inherent limitations to the effectiveness of any system of disclosure controls and procedures. Accordingly, even effective disclosure controls and procedures can only provide reasonable assurance of achieving their control objectives. Based upon this evaluation, our chief executive officer and chief financial officer have concluded that our disclosure controls and procedures were effective at the reasonable assurance level as of December 31, 2024.

Management's Report on Internal Control Over Financial Reporting

Management is responsible for establishing and maintaining adequate internal control over financial reporting, as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934, as amended. Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the consolidated financial statements for external reporting purposes in accordance with generally accepted accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness of internal control over financial reporting to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate over time.

Management, including our chief executive officer and our chief financial officer, assessed the effectiveness of our internal control over financial reporting as of December 31, 2024. In making this assessment, management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in *Internal Control—Integrated Framework 2013*. Based on its assessment and those criteria, management has concluded that we maintained effective internal control over financial reporting as of December 31, 2024.

Changes in Internal Control over Financial Reporting

There have been no changes in our internal control over financial reporting during the fiscal quarter ended December 31, 2024, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. Other Information.

Insider Trading Plans and Arrangements

During the quarter ended December 31, 2024, none of our directors or officers notified us that they adopted, modified or terminated any Rule 10b5-1 trading arrangement or any non-Rule 10b5-1 trading arrangement as defined in Item 408(a) of Regulation S-K.

Item 9C. Disclosure Regarding Foreign Jurisdictions that Prevent Inspections.

Not applicable.

PART III

Item 10. Directors, Executive Officers and Corporate Governance.

Code of Ethics

We have adopted a code of ethics and business conduct that applies to our officers, directors and employees, including our principal executive officer, principal financial officer and principal accounting officer, which is posted on our website at www.inspiremd.com. We intend to disclose future amendments to certain provisions of the code of ethics, or waivers of such provisions granted to executive officers and directors, on this website within four business days following the date of such amendment or waiver.

Insider Trading Policy

We have adopted a statement of trading policies that governs the trading in our securities by our directors, officers and certain other covered persons, and which is reasonably designed to promote compliance with applicable insider trading laws, rules and regulations, and any listing standards applicable to the Company. A copy of the Insider Trading Policy is included as Exhibit 19.1 to this annual report. In addition, with regard to any trading in our own securities, it is our policy to comply with the federal securities laws and the applicable exchange listing requirements.

Clawback Policy

We have adopted an Executive Officer Clawback Policy (the "Clawback Policy"), in accordance with the Nasdaq listing standards and Exchange Act Rule 10D-1, which applies to our current and former executive officers. Under the Clawback Policy, we are required to recoup the amount of any Erroneously Awarded Compensation (as defined in the Clawback Policy) on a pre-tax basis within a specified lookback period in the event of any Accounting Restatement (as defined in the Clawback Policy), subject to limited impracticability exception.

Other Information

The remaining information required by this Item 10 will be included in our definitive Proxy Statement for the 2025 Annual Meeting of Stockholders and is incorporated herein by reference.

Item 11. Executive Compensation.

The information required by this Item 11 will be included in our definitive Proxy Statement for the 2025 Annual Meeting of Stockholders and is incorporated herein by reference.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

The information required by this Item 12 will be included in our definitive Proxy Statement for the 2025 Annual Meeting of Stockholders and is incorporated herein by reference.

Item 13. Certain Relationships and Related Transactions, and Director Independence.

The information required by this Item 13 will be included in our definitive Proxy Statement for the 2025 Annual Meeting of Stockholders and is incorporated herein by reference.

Item 14. Principal Accountant Fees and Services.

The information required by this Item 14 will be included in our definitive Proxy Statement for the 2025 Annual Meeting of Stockholders and is incorporated herein by reference.

PART IV

Report of Independent Registered Public Accounting Firm

To the board of directors and shareholders of InspireMD Inc.

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of InspireMD Inc. and its subsidiaries (the “Company”) as of December 31, 2024 and 2023, and the related consolidated statements of operations, changes in equity and cash flows for each of the two years ended December 31, 2024, including the related notes (collectively referred to as the “consolidated financial statements”). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2024 and 2023, and the results of its operations and its cash flows for each of the two years ended December 31, 2024 in conformity with accounting principles generally accepted in the United States of America.

Substantial Doubt About the Company’s Ability to Continue as a Going Concern

The accompanying consolidated financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note 1b to the consolidated financial statements, the Company has suffered recurring losses from operations and cash outflows from operating activities that raise substantial doubt about its ability to continue as a going concern. Management’s plans in regard to these matters are also described in Note 1b. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty.

Basis for Opinion

These consolidated financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on the Company’s consolidated financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits of these consolidated financial statements in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company’s internal control over financial reporting. Accordingly, we express no such opinion.

Our audits included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters

Critical audit matters are matters arising from the current period audit of the consolidated financial statements that were communicated or required to be communicated to the audit committee and that (i) relate to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments.

We determined there are no critical audit matters.

INSPIREMD, INC.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1 - DESCRIPTION OF BUSINESS

a. General

InspireMD, Inc., a Delaware corporation (the “Company”), together with its subsidiaries, including InspireMD Ltd., an Israeli corporation, and InspireMD GmbH, a German corporation, is a medical device company focusing on the development and commercialization of products for the treatment of carotid artery disease and other vascular disease, including the Company’s proprietary CGuard™ stent platform. A stent is an expandable scaffold-like device, usually constructed of a metallic material, that is inserted into the lumen of an artery to create patency and improved blood flow. A sleeve of MicroNet™ mesh is attached over a stent to provide embolic protection both during and after stenting procedures.

The Company’s carotid product (CGuard™ EPS) combines MicroNet and a self-expandable nitinol stent in a single device to treat carotid artery disease.

The Company markets its products through distributors in international markets, mainly in Europe, and is seeking FDA approval for its CGuard Prime carotid stent system to enter the U.S. market.

b. Liquidity

The Company has an accumulated deficit as of December 31, 2024, as well as a history of net losses and negative operating cash flows. The Company expects to continue incurring losses and negative cash flows from operations until its product, CGuard™ EPS, reaches commercial profitability. As a result of these expected losses and negative cash flows from operations, along with the Company’s current cash position, the Company does not have sufficient resources to fund operations for at least the next 12 months. Therefore, there is substantial doubt about the Company’s ability to continue as a going concern. These consolidated financial statements have been prepared assuming that the Company will continue as a going concern and do not include any adjustments that might result from the outcome of this uncertainty.

Management’s plans include the continued commercialization of the Company’s product and raising capital through the sale of additional equity securities, debt or capital inflows from strategic partnerships and exercises of warrants. There are no assurances however, that the Company will be successful in obtaining the level of financing needed for its operations. If the Company is unsuccessful in commercializing its products and raising capital, it may need to reduce activities, curtail or cease operations.

c. Risks Related to the Company’s Operations in Israel

In October 2023, Israel was attacked by a terrorist organization and entered a state of war on several fronts. As of the date of these consolidated financial statements, sustained conflict in the region is ongoing and Israel has entered into certain ceasefires, the results of which are uncertain. The Company operations, including its production facility, are located in Israel. Currently, such activities in Israel remain largely unaffected.

During the years ended December 31, 2024 and 2023, the impact of this war on the Company’s results of operations and financial condition was immaterial, but such impact may increase, which could be material, as a result of the continuation, escalation or expansion of such war.

d. Risks Related to the Geopolitical and Military Tensions Between Russia and Ukraine in Europe

The Company derived approximately 14.5% and 13.5% in the years ended December 31, 2024 and 2023, respectively, of total sales in Russia and Belarus. The escalation of geopolitical instability in Russia and Ukraine as well as currency fluctuations in the Russian Ruble could negatively impact the Company’s operations, sales, and future growth prospects in that region.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 2 - SIGNIFICANT ACCOUNTING POLICIES

a. Use of estimates

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates using assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ from those estimates.

As applicable to these consolidated financial statements, the most significant estimates and assumptions relate to the determination of the lease terms in operating leases.

b. Functional currency

The currency of the primary economic environment in which the operations of the Company and its subsidiaries are conducted is the U.S. dollar (“\$” or “dollar”). Accordingly, the functional currency of the Company and its subsidiaries is the U.S. dollar.

The dollar figures are determined as follows: transactions and balances originally denominated in dollars are presented in their original amounts. Balances in foreign currencies are translated into dollars using historical and current exchange rates for non-monetary and monetary balances, respectively. The resulting translation gains or losses are recorded as financial income or expense, as appropriate. For transactions reflected in the statements of operations in foreign currencies, the exchange rates at transaction dates are used. Depreciation and changes in inventories and other changes deriving from non-monetary items are based on historical exchange rates.

c. Principles of consolidation

The consolidated financial statements include the accounts of the Company and of its subsidiaries. Intercompany transactions and balances have been eliminated upon consolidation.

d. Cash and cash equivalents

The Company considers all highly liquid investments purchased with original maturities of three months or less from the purchase date to be cash equivalents. As of December 31, 2024 and 2023, cash and cash equivalents consisted of cash, short-term deposits (up to three months from the date of deposit) and money market funds.

e. Marketable securities

Marketable securities consist of debt securities. The Company elected the fair value option to measure and recognize its investments in debt securities in accordance with ASC 825, Financial Instruments as the Company manages its portfolio and evaluates the performance on a fair value basis. Changes in fair value, realized gains and losses on sales of marketable securities, are reflected in the consolidated statements of operation as finance expense (income), net.

Marketable securities are classified under current assets in the consolidated balance sheets as they represent the investment of funds available for the Company’s current operations.

NOTE 2 - SIGNIFICANT ACCOUNTING POLICIES (continued):**f. Concentration of credit risk and allowance for doubtful accounts**

Financial instruments that may potentially subject the Company to a concentration of credit risk consist of cash and cash equivalents, marketable securities and long-term deposits, which are deposited in major financially sound institutions in the U.S. Israel and Germany, and trade accounts receivable and other receivables. The Company's trade accounts receivable is derived from revenues earned from customers from various countries. The Company performs ongoing credit evaluations of its customers' financial condition and, requires no collateral from its customers. The Company also has a credit insurance policy for some of its customers. The Company maintains the allowance for estimated losses resulting from the inability of the Company's customers to make required payments. The allowance represents the current estimate of lifetime expected credit losses over the remaining duration of existing accounts receivable considering current market conditions and supportable forecasts when appropriate. The estimate is a result of the Company's ongoing evaluation of collectability, customer creditworthiness, historical levels of credit losses, and future expectations. The allowance for expected credit losses was immaterial during the periods presented.

g. Inventory

Inventories are stated at the lower of cost (cost is determined on a "first-in, first-out" basis) or net realizable value. The Company's inventories generally have a limited shelf life and are subject to impairment as they approach their expiration dates. The Company regularly evaluates the carrying value of its inventory and when, based on such evaluation, factors indicate that impairment has occurred, the Company impairs the inventories' carrying value. There were no impairments or inventory allowances during the years ended December 31, 2024 and 2023.

h. Leases

Operating leases are included in operating lease right-of-use ("ROU") assets. Short-term balances regarding lease liabilities are included in accounts payable and accruals - Other and long-term balances regarding lease liabilities are included in operating lease liabilities. ROU assets represent Company's right to use an underlying asset for the lease term and lease liabilities represent obligation to make lease payments arising from the lease. Operating lease ROU assets and liabilities are recognized at the lease commencement date based on the present value of lease payments over the lease term. In determining the present value of lease payments, the Company uses the incremental borrowing rate based on the information available at the lease commencement date as the rate implicit in the lease is not readily determinable. The determination of the incremental borrowing rate requires management judgment based on information available at lease commencement. The lease terms may include periods covered by options to extend the lease when it is reasonably certain that the Company will exercise such options, and periods covered by options to terminate the lease when it is reasonably certain that the Company will not exercise such options. Operating lease cost is recognized on a straight-line basis over the lease term. Lease agreements that include lease and non-lease components are accounted for as a single lease component. The Company elected the short-term lease recognition exemption for leases with a lease term of 12 months or less.

i. Property, plant and equipment

Property, plant and equipment are stated at cost, net of accumulated depreciation and amortization. Depreciation is calculated using the straight-line method over the estimated useful lives of the related assets: over three years for computers and other electronic equipment, and seven to fifteen years for office furniture and equipment and machinery and equipment (mainly seven years). Leasehold improvements are amortized on a straight-line basis over the term of the lease, which is shorter than the estimated life of the improvements.

j. Impairment in value of long-lived assets

The Company tests long-lived tangible assets for impairment whenever events or circumstances present an indication of impairment. If the sum of expected future cash flows (undiscounted and without interest charges) of the long-lived assets is less than the carrying amount of such assets, an impairment would be recognized, and the assets would be written down to their estimated fair values, based on expected future discounted cash flows.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 2 - SIGNIFICANT ACCOUNTING POLICIES (continued):

k. Revenue recognition

A contract with a customer exists only when: 1) the parties to the contract have approved it and are committed to perform their respective obligations, 2) the Company can identify each party's rights regarding the distinct goods or services to be transferred ("Performance Obligations"), 3) the Company can determine the transaction price for the goods or services to be transferred, 4) the contract has commercial substance and 5) it is probable that the Company will collect the consideration to which it will be entitled in exchange for the goods or services that will be transferred to the customer. Revenues are recorded in the amount of consideration to which the Company expects to be entitled in exchange for Performance Obligations upon transfer of control to the customer, excluding sales taxes.

Revenue from sales of goods, including sales to distributors, is recognized when the customer obtains control of the product, once the Company has a present right to payment and the customer has legal title, and risks and rewards of ownership are obtained by the customer. Generally, this occurs when products are shipped. In few cases when products are directly sold to medical centers on consignment basis, revenue is recognized when the product is consumed.

The Company recognizes the incremental costs of obtaining contracts as an expense since the amortization period of the assets that the Company otherwise would have recognized is one year or less. The costs are recorded under selling and marketing expenses. Disaggregated revenue is disclosed in Note 13.

The Company recognizes revenue net of value added tax (VAT).

l. Research and development costs

Research and development costs, including the costs of the Company's U.S.-based clinical trial costs which were approximately \$3,815 and \$3,300 thousand for the years ended December 31, 2024 and 2023, respectively, are charged to the consolidated statements of operations as incurred.

m. Share-based compensation

The Company has equity incentive plans under which the Company grants equity awards, including stock options, restricted stock and restricted stock units ("RSUs") to employees, directors and service providers. Employee and service providers equity awards are accounted for using the grant-date fair value method. The Company determines compensation expense associated with restricted stock and RSUs based on the fair value of our common stock on the date of grant. The fair value of option awards is estimated using the Black-Scholes valuation model and expensed over the requisite service period. The Company elected to account for forfeitures as they occur.

The Company elected to recognize compensation expenses for awards to employees with only service conditions that have graded vesting schedules using the accelerated multiple option approach. The attribution for nonemployee awards is in the same manner as if the Company had paid cash for the goods or services.

In addition, some of our share-based awards to service providers are performance based, i.e., the vesting of these awards depends upon achieving certain goals. The Company recognizes compensation expenses for awards with performance conditions when the company concludes that it is probable that the performance condition will be achieved.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

n. Uncertain tax positions

The Company follows a two-step approach to recognizing and measuring uncertain tax positions. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit. If under the first step a tax position is assessed to be more likely than not of being sustained on audit, the second step is performed, under which the tax benefit is measured as the largest amount that is more than 50% likely to be realized upon ultimate settlement. Such liabilities are classified as long-term, unless the liability is expected to be resolved within twelve months from the balance sheet date. The Company's policy is to include interest related to unrecognized tax benefits within "Financial income - net".

o. Deferred income taxes

Deferred taxes are determined utilizing the "asset and liability" method based on the estimated future tax effects of differences between the financial accounting and tax bases of assets and liabilities under the applicable tax laws, and on tax rates anticipated to be in effect when the deferred taxes are expected to be paid or realized. The Company assesses realization of deferred income tax assets and, based on all available evidence, concludes whether it is more likely than not that the net deferred income tax assets will be realized. A valuation allowance is provided for the amount of deferred income tax assets not considered to be realizable.

The Company may incur an additional tax liability in the event of intercompany dividend distributions by its subsidiaries. Such additional tax liability in respect of these foreign subsidiaries has not been provided for in these consolidated financial statements as it is the Company's policy to permanently reinvest the subsidiaries' earnings and to consider distributing dividends only in connection with a specific tax opportunity that may arise.

Taxes that would apply in the event of disposal of investments in a foreign subsidiary have not been taken into account in computing the deferred taxes, as it is the Company's intention to hold, and not to realize, these investments.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 2 - SIGNIFICANT ACCOUNTING POLICIES (continued):

p. Advertising

Costs related to advertising and promotion of products are charged to sales and marketing expense as incurred. Advertising expenses were approximately \$691 and \$426 thousand for the years ended December 31, 2024 and 2023, respectively.

q. Net loss per share

Basic and diluted net loss per share is computed by dividing the net loss for the period by the weighted average number of shares of common stock, pre-funded warrants and fully vested restricted stock units outstanding during the period. The calculation of diluted net loss per share excludes the effect of potential dilution of share options, warrants, and unvested restricted stocks, unvested restricted stock units and Series C preferred stock as the effect is anti-dilutive.

For the purpose of calculating basic net loss per share, the additional shares of common stock that are issuable upon exercise of the Pre-funded Warrants have been included since the shares are issuable for a negligible consideration, as determined by the Company according to ASC 260-10-45-13, and have no vesting or other contingencies associated with them.

The total number of shares of common stock related to outstanding options, warrants, unvested restricted stock, unvested restricted stock units and Series C Preferred Stock, which were excluded from the calculations of diluted loss per share were 48,681,495 and 59,723,455 for the years ended December 31, 2024 and 2023, respectively. This amount includes 4,073,966 and 3,054,086 of unvested restricted stock included in the number of issued and outstanding shares as of December 31, 2024 and 2023, respectively.

For the years ended December 31, 2024 and 2023 the weighted average number of ordinary shares used in computing net loss per share - basic and diluted was as follows:

	2024	2023
Weighted average number of ordinary shares	20,501,816	14,606,248
Weighted average Vested restricted stock units	306,731	23,335
Weighted average Pre-funded Warrants	21,119,813	9,638,598
Total Weighted average number of ordinary shares used in computing net loss per share - basic and diluted	41,928,360	24,268,181

r. Segment reporting

The Company has one operating and reportable segment. The Company has adopted the new accounting standard ASU 2023-07 “Segment Reporting: Improvements to Reportable Segment Disclosures” in 2024, see note 14.

s. Fair value measurement

The Company measures fair value and discloses fair value measurements for financial assets and liabilities. Fair value is based on the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The accounting standard establishes a fair value hierarchy that prioritizes observable and unobservable inputs used to measure fair value into three broad levels, which are described below:

Level 1: Quoted prices (unadjusted) in active markets that are accessible at the measurement date for assets or liabilities. The fair value hierarchy gives the highest priority to Level 1 inputs.

Level 2: Observable prices that are based on inputs not quoted on active markets but corroborated by market data.

Level 3: Unobservable inputs are used when little or no market data is available. The fair value hierarchy gives the lowest priority to Level 3 inputs.

In determining fair value, the Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs to the extent possible and considers counterparty credit risk in its assessment of fair value.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 2 - SIGNIFICANT ACCOUNTING POLICIES (continued):

t. Recently issued accounting pronouncement, not yet adopted

- 1) In December 2023, the FASB issued ASU 2023-09 “Income Taxes (Topic 740): Improvements to Income Tax Disclosures”. This guidance is intended to enhance the transparency and decision-usefulness of income tax disclosures. The amendments in ASU 2023-09 address investor requests for enhanced income tax information primarily through changes to disclosure regarding rate reconciliation and income taxes paid both in the U.S. and in foreign jurisdictions. ASU 2023-09 is effective for fiscal years beginning after December 15, 2024 on a prospective basis, with the option to apply the standard retrospectively. Early adoption is permitted. The Company is currently evaluating this guidance to determine the impact it may have on its consolidated financial statements and disclosures.
- 2) In November 2024, the FASB issued ASU No. 2024-03 Income Statement—Reporting Comprehensive Income—Expense Disaggregation Disclosures (Subtopic 220-40). The ASU improves the disclosures about a public business entity’s expenses and provides more detailed information about the types of expenses in commonly presented expense captions. The amendments require that at each interim and annual reporting period an entity will, inter alia, disclose amounts of purchases of inventory, employee compensation, depreciation and amortization included in each relevant expense caption (such as cost of sales, SG&A and research and development). The ASU is effective for fiscal years beginning after December 15, 2026, and interim periods within fiscal years beginning after December 15, 2027. Early adoption is permitted. The Company is currently evaluating this ASU to determine its impact on the Company’s financial statements and disclosures.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 3 – FAIR VALUE MEASUREMENTS

As of December 31, 2024 and 2023, the carrying amounts of accounts payable, accounts receivable and other receivables approximate their fair values due to the short-term maturities of these instruments.

The carrying amount of the long-term deposit approximates its fair value since it is measured at its present value applying prevailing interest rates, see note 7.

The Company’s financial assets subject to fair value measurements on a recurring basis and the level of inputs used in such measurements were as follows:

As of December 31, 2024				
(\$ in thousands)				
Total	Level 1	Level 2	Level 3	
Assets:				
Cash equivalents-				
Money market funds	\$ 6,281	\$ 6,281	\$ -	\$ -
Marketable securities-				
U.S. government bonds	\$ 15,721	\$ -	\$ 15,721	\$ -
As of December 31, 2023				
(\$ in thousands)				
Total	Level 1	Level 2	Level 3	
Assets:				
Cash equivalents-				
Money market funds	\$ 7,094	\$ 7,094	\$ -	\$ -
Marketable securities-				
U.S. government bonds	\$ 29,383	\$ -	\$ 29,383	\$ -

The Company’s debt securities are classified within Level 1 and Level 2 because it uses quoted market prices or alternative pricing sources and models utilizing market observable inputs to determine their fair value.

The cost of marketable securities as of December 31, 2024 and 2023 is \$15,277 and 28,727 thousand, respectively.

INSPIREMD, INC.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 4 - MARKETABLE SECURITIES

The following table sets forth the Company's marketable securities for the indicated period:

	December 31,	
	2024	2023
	(\$ in thousands)	
U.S. government bonds	\$ 15,721	\$ 29,383

The following table summarizes the fair value of the Company's marketable securities classified by maturity as of December 31, 2024 and 2023:

	December 31,	
	2024	2023
	(\$ in thousands)	
Amounts maturing within one year	\$ 15,721	\$ 24,523
Amounts maturing after one year through two years	-	4,860
	\$ 15,721	\$ 29,383

The table below sets forth a summary of the changes in the fair value of the Company's marketable securities for the years ended December 31, 2024 and 2023:

	December 31,	
	2024	2023
	(\$ in thousands)	
Balance at beginning of the year	\$ 29,383	-
Additions	14,444	34,644
Maturity	(29,000)	(6,000)
Interest received	(299)	(38)
Changes in fair value during the year	1,193	777
Balance at end of the period	15,721	29,383

NOTE 5 - PROPERTY, PLANT AND EQUIPMENT

a. Composition of assets, grouped by major classifications, is as follows:

	December 31,	
	2024	2023
	(\$ in thousands)	
Cost:		
Computer equipment	\$ 726	\$ 425
Office furniture and equipment	464	249
Machinery and equipment	2,640	1,702
Leasehold improvements	861	724
	4,691	3,100
Less - accumulated depreciation and amortization	(2,320)	(2,040)
Net carrying amount	\$ 2,371	\$ 1,060

b. Depreciation and amortization expenses totaled approximately \$280,000 and \$232,000 for the years ended December 31, 2024, and 2023, respectively, excluding fixed assets that the company purchased, which is awaiting FDA approval and, as a result, is not yet operational and not depreciated.

INSPIREMMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 6 - LIABILITY FOR EMPLOYEE RIGHTS UPON RETIREMENT AND OTHERS

Israeli labor law generally requires payment of severance pay upon dismissal of an employee or upon termination of employment in certain other circumstances.

Pursuant to section 14 of the Israeli Severance Compensation Act, 1963, most of the Company's employees are entitled to have monthly deposits, at a rate of 8.33% of their monthly salary, made in their name with insurance companies. Payments in accordance with section 14 relieve the Company from any future severance payments to these employees. The severance pay expenses for such employees were approximately \$293,000 and \$256,000 for the years ended December 31, 2024 and 2023, respectively.

The severance pay liability of the Company for the rest of its Israeli employees amounting to \$1,224 thousand and \$1,084 thousand for the years ended December 31, 2024 and 2023, respectively, reflects the undiscounted amount of the liability and is based upon the number of years of service and the latest monthly salary. The severance pay liability is partly covered by insurance policies and by regular deposits with recognized severance payment funds. The Company may only withdraw funds previously deposited for savings in connection with the payment of severance. The severance pay expenses for such employees were approximately \$124,000 and \$116,000 for the years ended December 31, 2024 and 2023, respectively.

NOTE 7 - LEASE AGREEMENTS

- 1) On October 9, 2024, the Company entered into a lease agreement in Miami, Florida (the "U.S. Lease") for the establishment of its new global headquarters.

The U.S. lease rent commences on the date that the landlord delivers the entire premises to the Company with (i) the landlord's completion of the construction of Suite 280 and (ii) the construction of Suite 215 being substantially complete (the "Commencement Date"). The U.S. lease will be in effect until August 31, 2030, with an option for a five-year extension in accordance with the lease terms. However, the Company has determined that the lease renewal option is not reasonably certain to be exercised due to operational and strategic factors.

Under the U.S. Lease, the Company will pay the landlord a security deposit of \$500 thousand. Provided the Company does not default, the security deposit will be refunded at specified intervals throughout the lease term. The present value of the deposit as of December 31, 2024, is \$426 thousand, and it is classified as Long-term Deposit while the remaining is included as Operating Lease Right of Use Assets.

The Company took possession of Suite 215 as of November 1, 2024 ("Commencement Date"), and it expects to take possession of Suite 280 in May 2025 following the substantial completion of landlord improvements as outlined in the U.S. Lease.

- 2) The Company's Israeli subsidiary had a lease agreement for a facility in Israel (the "Israeli Lease"), which expired on December 31, 2022 with an option to extend the Israeli Lease for two additional years until December 31, 2024. On May 25, 2022 the Company amended the Israeli Lease and extended it until December 31, 2026 and also leased additional space in the facility.

On August 24, 2023, the Company amended the Israeli Lease, leasing additional space in the facility and shortened the lease term of another space in the building. The balances of right of use assets and lease liabilities increased due to the newly leased space and decreased due to the lease that was shortened.

On March 14, 2024, the Company amended the Israeli Lease, modifying the structure of the extension options. While the lease term currently extends through December 31, 2027, any extensions beyond this date are subject to the landlord's approval and are not solely at the Company's discretion.

In the fourth quarter of 2024, as part of the approval of the Company's long term strategic production plan, the Company reassessed its long-term leasing strategy. Following this reassessment, the Company updated its assumption on the lease term for the Israeli premise and included the optional period until the end of 2027 within the lease term.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

Operating lease cost for the years ended December 31, 2024 and 2023 in Tel-Aviv was \$423 and \$433 thousand respectively.

Operating lease cost for the years ended December 31, 2024 and 2023 in Miami was \$34 thousand and \$0 respectively.

In addition to the fixed lease payments in Miami, the Company incurred variable expenses related to the lease, including utilities, maintenance, and other common area costs, totaling approximately \$21 thousand for the year ended December 31, 2024.

Supplemental information related to leases are as follows:

	December 31,	
	2024	2023
	(\$ in thousands)	
Operating lease right-of-use assets	2,360	1,473
Current Operating lease liabilities	(542)	(557)
Non-current operating lease liabilities	(1,796)	(1,038)

Operating cash flows from operating leases (cash paid in thousands)	(745)	(429)
Weighted Average Remaining Lease Term	3.93	3
Weighted Average Discount Rate	11.82%	9.73%

Maturities of lease liabilities as of December 31, 2024 are as follows:

	Amount	
	(\$ in thousands)	
2025	571	
2026	853	
2027	922	
2028	217	
2029 onwards	376	
Total lease payments	2,939	
Less imputed interest	(601)	
Total	2,338	

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 8 - COMMITMENTS AND CONTINGENT LIABILITIES:

Distribution Agreement with Chinese Partner

On February 3, 2021, the Company entered into a distribution agreement (the “Distribution Agreement”) with three China-based partners, pursuant to which the Chinese partners will be responsible for conducting the necessary registration trials for commercial approval of the Company’s products in China, followed by an eight-year exclusive distribution right to sell the Company’s products in China with the term of the agreement continuing on a year-to-year basis unless terminated. Under the Distribution Agreement, the China-based partners will be subject to minimum purchase obligations. The Distribution Agreement may be terminated for cause upon failure to meet minimum purchase obligations, failure to obtain regulatory approvals or for other material breaches.

In addition, the agreement stipulates that if the Distributor fails to obtain the Regulatory Approvals by the time stipulated in the agreement due to the failure of the clinical trials, and this Agreement was terminated as a result of such failure to obtain Regulatory Approvals, InspireMD shall reimburse Distributor in an amount which is 50% of Distributor’s direct out of pocket costs to 3rd parties for conducting the clinical trials, which reimbursement will not exceed USD 1,000,000. The consolidated financial statements include a liability, based on 50% of the Distributor costs incurred until December 31, 2024. The liability at December 31, 2023 and 2024 is immaterial.

NOTE 9 - EQUITY

a. Share capital

The Company’s shares of common stock are listed on the Nasdaq Capital Market.

Private Placement

On May 12, 2023, the Company entered into a securities purchase agreement (the “Purchase Agreement”) pursuant to which the Company agreed to sell and issue in a private placement (the “Private Placement Offering”) an aggregate of 10,266,270 shares (the “Private Placement Shares”) of the Company’s common stock, pre-funded warrants (the “Pre-Funded Warrants”) to purchase up to 15,561,894 shares of common stock and warrants to purchase up to an aggregate of 51,656,328 shares of common stock, consisting of Series H warrants to purchase up to 12,914,086 shares of common stock (the “Series H Warrants”), Series I warrants to purchase up to 12,914,078 shares of common stock (the “Series I Warrants”), Series J warrants to purchase up to 12,914,086 shares of Common Stock (the “Series J Warrants”) and Series K warrants to purchase up to 12,914,078 shares of common stock (the “Series K Warrants” and together with the Series H Warrants, Series I Warrants and Series J Warrants, the “Warrants”), at an offering price of \$1.6327 per Private Placement Share and associated Warrants and an offering price of \$1.6326 per Pre-Funded Warrant and associated Warrants. The Private Placement Offering closed on May 16, 2023.

Aggregate gross proceeds to the Company in respect of the Private Placement Offering were \$42.2 million, before deducting fees payable to the placement agent and other offering expenses payable by the Company which amounted to approximately \$4.6 million. If the Warrants are exercised in cash in full this would result in an additional \$71.4 million of gross proceeds.

The Pre-Funded Warrants are immediately exercisable at an exercise price of \$0.0001 per share and will not expire until exercised in full. The Warrants are immediately exercisable upon issuance at an exercise price of \$1.3827 per share. The Warrants have a term of the earlier of (i) five years from the date of issuance and (ii) (A) in the case of the Series H Warrants, 20 trading days following the Company’s public release of primary and secondary end points related to one year follow up study results from the Company’s C-Guardians pivotal trial, (B) in the case of the Series I Warrants, 20 trading days following the Company’s announcement of receipt of Premarket Approval (PMA) from the Food and Drug Administration, or FDA, for the CGuard Prime Carotid Stent System (135 cm), (C) in the case of the Series J Warrants, 20 trading days following the Company’s announcement of receipt of FDA approval for the SwitchGuard transcrotid system and CGuard Prime 80 cm and (D) in the case on the Series K Warrants, 20 trading days following the end of the fourth fiscal quarter after the fiscal quarter in which the first commercial sales of the CGuard Carotid Stent System in the United States begin. The Warrants may be exercised on a cashless basis if there is no effective registration statement registering the shares underlying the warrants.

In 2024 and 2023, the Company issued a total of 1,728,382 and 307,260 shares of its common stock, respectively, in connection with the exercise of Pre-Funded Warrants to purchase 1,728,390 and 307,271, respectively, shares of common stock of which 200,000 and 307,271, respectively, Pre-Funded Warrants were exercised to 199,992 and 307,260 shares of its common stock on a cashless basis. As of December 31, 2024 and 2023, there are Pre-Funded Warrants to purchase an aggregate of 26,147,323 and 15,254,623, respectively shares of common stock outstanding.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

Pursuant to the full ratchet anti-dilution adjustment provisions in the respective certificate of designation for the Company's Series C Preferred Stock, the conversion price of the outstanding shares of the Series C Preferred Stock was reduced to \$1.3827 per share, effective as of the date of the securities purchase agreement entered for the Offering, and the number of shares of common stock issuable upon conversion of the Series C Preferred Stock increased by 5,668 additional shares of common stock upon conversion of the Series C Preferred Stock, based on 1,718 shares of Series C Preferred Stock outstanding as of May 16, 2023.

As of December 31, 2024 and 2023, there were 1,718 shares of Series C Preferred Stock outstanding, convertible into an aggregate of 7,952 shares of the Company's common stock, with a total stated value of \$10,997.

Exercise of Series H Warrant

The Series H Warrants had a term of the earlier of (i) five years from the date of issuance and (ii) (A) 20 trading days following the Company's public release of primary and secondary end points related to one year follow up study results from the Company's C-GUARDIANS pivotal trial.

Following the announcement on May 28, 2024 of the one year follow up study results from the Company's C-GUARDIANS pivotal trial, the Series H Warrants were exercised in full into 292,996 shares of common stock and pre-funded warrants exercisable into 12,621,090 shares of common stock. The net proceeds to the Company from the exercise of the Series H Warrants were \$16.9 million after deduction of placement agent fees of approximately \$1 million. The Series H Warrants, each exercisable at \$1.3827 per share of common stock and \$1.3826 per pre-funded warrant, were issued as part of the Private Placement Offering.

ATM Offering

On May 31, 2024, the Company entered into an at-the-market ("ATM") facility with Piper Sandler & Co. ("Piper") pursuant to an Equity Distribution Agreement (the "Distribution Agreement"). In accordance with the Distribution Agreement, the Company is entitled, at its sole discretion, to offer and sell through or to Piper Sandler, acting as a sales agent, shares of its common stock having an aggregate offering price of up to \$17.0 million throughout the period during which the ATM facility remains in effect. The Company has agreed to pay Piper a commission of 3.0% of the gross proceeds from the sale of shares of common stock under the ATM facility. For the year ended December 31, 2024, the net proceeds to the Company from the issuance of 647,277 shares of common stock were \$1,598 thousand after deduction of issuance fees of approximately \$81 thousand.

As of December 31, 2024, the Company has outstanding warrants to purchase an aggregate of 40,268,464 shares of common stock as follows:

	Number of underlying Common stock	Exercise price	Expiration date
Series F Warrants	433,878	\$ 7.4250	June 5, 2025- October 16, 2025
Series G Warrants	1,092,344	\$ 10.230	February 8, 2026
Series I Warrants	12,914,078	\$ 1.3827	*
Series J Warrants	12,914,086	\$ 1.3827	*
Series K Warrants	12,914,078	\$ 1.3827	*
Total Warrants	40,268,464		

* The Warrants have a term of the earlier of (i) May 15, 2028 and (ii) (A) in the case of the Series I Warrants, 20 trading days following the Company's announcement of receipt of Premarket Approval from the Food and Drug Administration ("FDA") for the CGuard Prime Carotid Stent System (135 cm), (B) in the case of the Series J Warrants, 20 trading days following the Company's announcement of receipt of FDA approval for the SwitchGuard and CGuard Prime 80 and (C) in the case on the Series K Warrants, 20 trading days following the end of the fourth fiscal quarter after the fiscal quarter in which the first commercial sales of the CGuard Carotid Stent System in the United States begins.

During the years ended December 31, 2024 and 2023, a total of 213,458 and 54,135 warrants expired, respectively.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 9 – EQUITY (continued):

b. Share-Based Compensation

- 1) On September 30, 2021, at the Company’s 2021 annual meeting of stockholders, the Company’s stockholders approved the 2021 Equity Incentive Plan.

The Company’s 2021 Equity Incentive Plan provides for the granting of incentive stock options, nonqualified stock options, stock appreciation rights, restricted stock, restricted stock units, performance awards, dividend equivalent rights, and other awards, which may be granted singly, in combination, or in tandem.

As of December 31, 2024, we had 9,237,869 shares of common stock available for future issuance under the 2021 Equity Incentive Plan.

- 2) On September 30, 2024, the compensation committee of the Company’s board of directors approved the InspireMD, Inc. 2024 Inducement Plan (the “2024 Inducement Plan”) to be used exclusively for grants of equity-based awards to individuals who were not previously employees or directors of the Company, as an inducement material to the individual’s entry into employment with the Company.

As of December 31, 2024, the Company had 1,957,763 shares of common stock available for future issuance under the 2024 Inducement Plan.

- 3) The following table summarizes information about stock options granted to employees:

	Year ended December 31			
	2024		2023	
	Number of options	Weighted average exercise price	Number of options	Weighted average exercise price
Outstanding - beginning of the year	1,379,696	2.58	294,712	5.21
Granted	777,761	3.07	1,097,250	1.89
Forfeited	(3,314)	3.54	(12,266)	4.00
Outstanding- end of period	2,154,143	2.76	1,379,696	2.58
Exercisable at the end of the year	644,882	3.36	215,709	5.38

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

4) The following table summarizes information about stock options granted to non-employees:

	Year ended December 31			
	2024		2023	
	Number of options	Weighted average exercise price	Number of options	Weighted average exercise price
Outstanding - beginning of the year	791,669	2.06	166,669	3.37
Granted	125,000	2.37	625,000	1.71
Outstanding - end of period	916,669	2.10	791,669	2.06
Exercisable at the end of the year	387,333	2.37	84,667	3.42

5) The following table summarizes information about restricted stock granted to employees:

	Year ended December 31	
	2024	2023
	Number of restricted stock	
Outstanding - beginning of the year	3,054,086	355,951
Granted	2,217,966	2,914,340
Forfeited	(128,660)	(29,695)
Vested	(1,069,428)	(186,510)
Outstanding - end of the year	4,073,964	3,054,086

6) The following table summarizes information about RSUs granted to employees:

	Year ended December 31	
	2024	2023
	Number of RSUs	
Outstanding - beginning of the year	1,282,228	237,078
Granted	563,499	1,045,150
Outstanding - end of the year	1,845,727	1,282,228

7) The following table provides additional information about all options outstanding and exercisable:

	Outstanding as of December 31, 2024		
	Exercise price	Weighted average remaining	
		Options outstanding	contractual life (years)
\$1.15-3.14	2,686,358	8.56	704,641
\$3.30-4.12	227,932	7.53	171,052
\$4.95-10.05	152,469	6.00	152,469
\$16.50	4,087	5.01	4,053
	3,070,846	8.35	1,032,215

The weighted average of the remaining contractual life of total vested and exercisable options as of December 31, 2024 was 7.73 years.

The aggregate intrinsic value of the total exercisable options as of December 31, 2024 was approximately \$494,250.

The weighted average fair value of options granted to employees was \$2.54 and \$1.65 for the years ended December 31, 2024 and 2023, respectively. The weighted average fair value of options granted was estimated using the Black-Scholes option-pricing model.

The weighted average fair value of options granted to consultants was \$1.87 and \$1.50 for the years ended December 31, 2024 and 2023, respectively. The weighted average fair value of options granted was estimated using the Black-Scholes option-pricing model.

The weighted average fair value of restricted stock granted was \$2.94 and \$1.95 for the years ended December 31, 2024 and 2023, respectively.

The weighted average fair value of RSU granted was \$3.14 and \$1.76 for the years ended December 31, 2024 and 2023, respectively.

The vesting period for outstanding stock options, restricted stock, and RSUs is typically three years, with one-third of the awards vesting annually. The options and restricted stock to directors are subject to a one-year vesting period. Additionally, some of our share-based awards to service providers are performance-based, vesting upon the achievement of specified performance criteria related to clinical or marketing activities.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

- 8) The following table sets forth the assumptions that were used in determining the fair value of options granted to employees and consultants for the year December 31, 2024 and 2023:

	Year ended December 31	
	2024	2023
Expected life	5.125-10 years	5.125-6.5 years
Risk-free interest rates	3.93%-4.44%	3.58%-4.73%
Volatility	91.82%-119.38%	109.62%-125.61%
Dividend yield	-	-

The Company does not have sufficient historical exercise data to provide a reasonable basis upon which to estimate expected term. Accordingly, as to ordinary course options granted, the expected term was determined using the simplified method, which takes into consideration the option's contractual life and the vesting periods (for non-employees, the expected term is equal to the option's contractual life).

The annual risk-free rates are based on the yield rates of zero coupon non-index linked U.S. Federal Reserve treasury bonds as both the exercise price and the share price are in dollar terms. The Company's expected volatility is derived from its historical data.

- 9) As of December 31, 2024, the total unrecognized compensation cost on employee and non-employee stock options, restricted stock and RSUs, related to unvested stock-based compensation, amounted to approximately \$7.29 million. This cost is expected to be recognized over a weighted-average period of approximately 0.85 years. This expected cost does not include the impact of any future stock-based compensation awards.

- 10) The following table summarizes the allocation of total share-based compensation expense in the consolidated statements of operations:

	Year ended December 31	
	2024	2023
(\$ in thousands)		
Cost of revenues	\$ 256	\$ 93
Research and development	2,412	649
Sales and marketing	1,025	416
General and administrative	6,445	3,332
	<u>\$ 10,138</u>	<u>\$ 4,490</u>

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 10 – RELATED PARTIES TRANSACTIONS

- 1) During the year ended December 31, 2023, a consulting company whose founder and chief executive officer is one of our board members provided certain marketing services in the amount of \$788. No services were provided during the year ended December 31, 2024.
- 2) On September 15, 2023, the board approved the company's entry into a consultancy agreement (the "Consultancy Agreement") with a member of the immediate family of the Company's chief executive officer for certain administrative projects in connection with the Company's expansion to the U.S. until a full-time Company employee is retained in such capacity. Pursuant to the Consultancy Agreement, the Company will pay a fixed hourly fee of \$50 for a maximum of 20 hours per week and customary expenses. On July 1, 2024 the audit committee amended the Consultancy Agreement. Pursuant to the amended Consultancy Agreement, the Company will pay a fixed hourly fee of \$100 for a maximum of 95 hours per month in an aggregate amount not to exceed \$120,000, including expenses, for the subsequent twelve month period until June 30, 2025. Consulting expenses for the years ended December 31, 2024 and 2023, were \$75,522 and \$11,440, respectively.
- 3) Election to Receive Shares of Common Stock in lieu of Cash Compensation

During 2023, certain non-employee directors elected to receive all or a portion of their cash retainer amount in shares of the Company's common stock under the 2021 Equity Incentive Plan. For a director that made that election, a stock award under the 2021 Equity Incentive Plan was paid quarterly on the first day of each next quarter ("Issuance Dates") and became fully vested on the Issuance Dates. The stock award was determined by dividing (x) the product of the cash retainer amount and percentage of the cash retainer amount elected to be taken in shares by (y) the "Fair Market Value" (as defined in the 2021 Equity Incentive Plan) of a share on the Issuance Dates.

For the year ended 2024, no expenses were recorded in shares of the company.

During the year ended December 31, 2023 the Company issued 52,129 shares of common stock to non-employee directors who elected to receive all or a portion of their cash retainer amount for the nine months ended September 30, 2023 in shares of the Company's common stock under the 2021 Equity Incentive Plan.

As of December 31, 2023, there was an accrual for \$55,000 for director's fees. Out of this an amount of \$22,875 was paid in cash and \$32,125 was issued in shares of the Company's common stock under the 2021 Equity Incentive Plan. On January 1, 2024 the Company issued 11,854 shares of common stock.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 11 - TAXES ON INCOME:

a. Tax laws applicable to the Company and its subsidiaries

Taxation in the United States

InspireMD, Inc. is taxed under U.S. tax laws. Accordingly, the applicable federal corporate tax rate in 2024 and 2023 is 21%. The applicable state income tax rate in 2024 and 2023 is 3.42%.

Taxation in Israel

InspiredMD, Ltd is taxed under Israeli tax laws. Accordingly, the applicable corporate tax rate in 2024 and 2023 is 23%.

Taxation in Germany

InspireMD GmbH is taxed according to the tax laws in Germany. Accordingly, the applicable tax rates are corporate tax rate of 15.825% and trade tax rate of 17.15% in 2024 and 2023

b. Tax benefits under the Law for the Encouragement of Capital Investments, 1959 (the "Law"):

On December 29, 2016, the Investment Law was amended ("73 Amendment"), which includes, inter alia, two new tax incentive opportunities. These are the Preferred Technological Enterprise ("PTE") and Special Preferred Technological Enterprise ("SPTE"). In order to benefit from either of these options, a company must meet certain qualifications and receive formal approval from the Israel Innovation Authority ("IIA") which allows the company to use the reduced corporate tax rate of 12% on its "Preferred Technological Income" (earned from enterprises located in Development outside of Zone A) in the case of a "preferred technology enterprise", or 6% on its "preferred technology income" (earned from enterprises located in Development Zone A or outside it) in the case of a "special preferred technology enterprise". Additionally, any "technology income", as this term is defined by the Law, not classified as "preferred technology income" is subject to the corporate tax rate.

Furthermore, according to the provisions regarding "preferred technology enterprise" and "special preferred technology enterprise" in the Law and the regulations thereunder, and to the extent the income is attributable to manufacturing, this income is classified as "preferred income" and is taxed at 7.5% or 16% according to the development zone. To the extent the income is from an intangible asset used for marketing, it is subject to the normal corporate tax rate.

Additionally, when income of a company originating from "preferred technology income" is distributed as dividend to a foreign-resident corporation, tax withholding from the dividend is 4%, provided that 90% or more of that company's shares are directly held by one or more foreign corporations, and the profits resulted after they acquired the shares.

c. Carry forward tax losses

As of December 31, 2024, the Company had a net carry forward tax loss of approximately \$60 million, of which approximately \$35 million (arising before January 1, 2018), expires until 2038, and approximately \$25 million, which does not expire, but is limited to offset 80% of the net income in the year it is utilized.

Under the U.S. tax laws, for net operating losses (NOLs) arising after December 31, 2017, the Tax Cuts and Jobs Act enacted on December 22, 2017 (the "2017 Act") limits a taxpayer's ability to utilize NOL carryforwards to 80% of taxable income.

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

In addition, NOLs arising after 2017 can be carried forward indefinitely, but carryback is generally prohibited. NOLs generated in tax years beginning before January 1, 2018, will not be subject to the foregoing taxable income limitation and will continue to have a two-year carryback and twenty-year carryforward period.

As of December 31, 2024 and 2023, InspireMD Ltd., an Israeli subsidiary, had a net carry forward tax loss of approximately \$126 and \$107 million. Under Israeli tax laws, the carry forward tax losses can be utilized indefinitely.

The Israeli subsidiary is taxed in New Israeli Shekel (“NIS”), which is different from its functional currency (U.S. Dollar). The change in the Israeli subsidiary NOL’s for tax purposes partly resulted by such rate differences.

d. Loss before income taxes

The components of loss before income taxes are as follows:

	Year ended December 31	
	2024	2023
	(\$ in thousands)	
Loss before taxes on income:		
InspireMD, Inc.	\$ (10,385)	\$ (5,772)
Subsidiaries	(21,561)	(14,079)
	\$ (31,946)	\$ (19,851)

NOTE 11 - TAXES ON INCOME (continued):

e. Current taxes on income

The main reconciling item between the statutory tax rate of the Company and its subsidiaries and the effective tax rate is the change in valuation allowance in respect of tax benefits from carried forward tax losses due to uncertainty of the realization of such tax benefits.

The changes in the valuation allowance for the years ended December 31, 2024 and 2023 were as follows:

	Year ended December 31	
	2024	2023
	(\$ in thousands)	
Balance at the beginning of the year	\$ 42,651	\$ 40,071
Changes during the year:		
Losses during the year (including foreign exchange rate effect)	5,779	2,580
Balance at the end of the year	\$ 48,430	\$ 42,651

INSPIREMD, INC.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

f. Accounting for Uncertain Tax positions

The following is a reconciliation of the total amounts of the Company's uncertain tax positions during the years ended December 31, 2024 and 2023:

	Year ended December 31,	
	2024	2023
	(\$ in thousands)	
Balance at beginning of the year	\$ 168	\$ 106
Additions related to uncertain tax positions taken this year	57	62
Balance at end of the year	\$ 225	\$ 168

INSPIREMD, INC.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (continued)

NOTE 14 – SEGMENT INFORMATION

The Company has one operating and reporting segment, that develops, manufactures and markets products for the treatment of carotid artery disease and other vascular disease, including the Company’s proprietary CGuard™ stent platform. The Company’s Chief Operating Decision Maker (“CODM”), who is the CEO evaluates the Company’s performance based on its internal reporting which is consistent with the presentation in the Company’s consolidated financial statements. Accordingly, our CODM uses consolidated net loss to measure segment profit or loss, allocate resources, and assess performance.

The CODM examines, within each operational function the employee salaries including the bonus and share based compensation, clinical trials expenses within the research and development operations and certain other expenses.

The following table summarizes the Company’s segment revenue, significant segment expenses, and segment loss.

	Year ended December 31,	
	2024	2023
Revenues	7,009	6,205
Cost of Revenues:

NOTE 15 - SUBSEQUENT EVENTS:

Subsequent to December 31, 2024, the Company granted 2,253,445 restricted shares of the Company’s common stock to employees and directors. The shares to employees are subject to a three-year vesting period, with one-third of such awards vesting each year. The shares to directors are subject to a one-year vesting period.

Subsequent to December 31, 2024, the Company granted 558,417 restricted share units of the Company’s common stock to the chief executive officer. The shares are subject to a three-year vesting period, with one-third of such awards vesting each year.

Subsequent to December 31, 2024, the Company granted to employees and directors options to purchase a total of 848,204 shares of the Company’s common stock. The options have an exercise price of \$2.76 per share, which was the fair market value of the Company’s common stock on the date of the grant. The options to employees are subject to a three-year vesting period, with one-third of such awards vesting each year. The options to directors are subject to a one-year vesting period.

Re: Letter of Intent (“LOI”) for Employment at InspireMD, Inc.

Dear Shane,

On behalf of InspireMD, Inc. (the “**Company**”) we are pleased to confirm our offer of employment to you for the **General Manager: North America and V.P. Global Marketing** reporting to the CEO.

Your Start Date is anticipated to be February 20, 2023, which in all cases shall be after any enforced period of notice or noncompetition with any former employer. General terms of your employment with the Company and, along with the Agreement Regarding Confidentiality, Non-Solicitation, Non-Competition, Non-Recruitment, and Inventions (the “Covenants Agreement”) shall be the governing documents regarding your employment terms once executed, to be provided.

Your employment terms shall be as follows:

1. You will be responsible for the leadership of the Americas business including Global Strategic Marketing to include overall strategic planning, oversight of FDA IDE trial results and KOL relationships, commercial and operational planning and leadership. Global responsibilities will include Marketing as well as other strategic initiatives to be defined with CEO.
 2. You will be paid an annual base gross salary of \$ **318,000**.
 3. You will be eligible for a yearly gross bonus (the “Bonus”) of 50% of your annual gross salary per the 12-month period subject to the Company’s annual bonus plan in effect for that given year. The 50% assumes 100% achievement of targets. The Bonus shall be paid to you on a yearly basis provided in each case that you are employed on the bonus payment date. For each year, the actual payout is subject to the compensation committee’s sole and absolute discretion and final approval.
 4. Subject to the approval of the company’s compensation committee, you will be eligible for the equity awards as an inducement grant equal to 1% of the outstanding shares of common stock of the company (immediately following the completion of the company’s offering that it is currently conducting). If the company’s offering that it is conducting is not completed, then subject to the approval of the company’s compensation committee, you will be eligible for equity awards as an inducement grant equal to 1% of the outstanding shares of common stock of the company (at the time of approval of the grant). In either instance, such equity awards will consist of 75% of the equity awards being granted as restricted shares and with the remaining 25% of the equity awards being granted as stock options, all of which equity awards shall be outside of the 2021 Equity Incentive Plan and subject to terms and conditions of the award agreements to be entered into. Such restricted shares and options will vest in equal portions annually over a three-year period from the date of grant and the exercise price of the options shall be the closing share price of the company’s common stock on the date of grant.
 5. You will be eligible to 20 vacation days. Vacation days shall be governed by the terms and conditions of the Company’s vacation day policy.
 6. Healthcare Insurance: Reimbursement of premium of health insurance until a group policy can be provided.
 7. Your employment is subject to and conditioned on your execution of the Covenants Agreement, attached hereto. Together with the LOI, once executed, the LOI and Covenants Agreement will be the governing agreements for purposes of your employment.
-

You agree to abide by all governing Company policies and/or procedures. In all cases, your employment shall be “at will” and may be terminated with or without cause immediately upon written notice by either party; provided, however, that you agree to give no less than thirty days of written notice in the event of your resignation. Employee name, we look forward to working with you at the Company. Please sign and date this LOI on the spaces provided below to acknowledge your acceptance thereof.

Sincerely,

InspireMD Ltd.

By /s/ Marvin Slosman

CEO

I agree to and accept employment with InspireMD, Inc. on the terms and conditions set forth in this LOI.

Date: February 12, 2024

/s/ Shane Gleason

Insider Trading Policy**1 Purpose**

This Insider Trading Policy (the “**Policy**”) provides guidelines with respect to transactions in the securities of InspireMD, Inc. (the “**Company**”) and the handling of confidential information about the Company and the companies with which the Company does business. The Company’s Board of Directors has adopted this Policy to promote compliance with federal, state and foreign securities laws that prohibit certain persons who are aware of material nonpublic information about a company from: (i) trading in securities of that company; or (ii) providing material nonpublic information to other persons who may trade on the basis of that information.

2 Scope

This Policy applies to all officers of the Company and its subsidiaries, all members of the Company’s Board of Directors, and all employees of the Company and its subsidiaries. The Company may also determine that other persons should be subject to this Policy, such as contractors or consultants who have access to material nonpublic information. This Policy also applies to Family Members, other members of a person’s household and entities controlled by a person covered by this Policy, as described below (collectively referred to in this Policy as “**Insiders**”).

3 Applicable Documents

FOR-056-11 – Insider Trader Form

Appendix 1 - GUIDELINES FOR RULE 10B5-1 PLANS

4 Policy**4.1 Transactions Subject to the Policy**

This Policy applies to transactions in the Company’s securities (collectively referred to in this Policy as “**Company Securities**”), including the Company’s common stock, options to purchase common stock, preferred stock, warrants, restricted shares or units or any other type of securities that the Company may issue, including (but not limited to), convertible debentures, as well as derivative securities that are not issued by the Company, such as exchange-traded options or swaps relating to the Company’s Securities.

**Insider Trading Policy****4.2 Individual Responsibility**

Persons subject to this Policy have ethical and legal obligations to maintain the confidentiality of information about the Company and to not engage in transactions in Company Securities while in possession of material nonpublic information. Each individual is responsible for making sure that he or she complies with this Policy, and that any family member, household member or entity whose transactions are subject to this Policy, as discussed below, also comply with this Policy. In all cases, the responsibility for determining whether an individual is in possession of material nonpublic information rests with that individual, and any action on the part of the Company, the Compliance Officer or any other employee or director pursuant to this Policy (or otherwise) does not in any way constitute legal advice or insulate an individual from liability under applicable securities laws. You could be subject to severe legal penalties and disciplinary action by the Company for any conduct prohibited by this Policy or applicable securities laws, as described below in more detail under the heading "*Consequences of Violations.*"

4.3 Administration of the Policy

The Company's Chief Financial Officer, shall serve as the Compliance Officer for the purposes of this Policy, and in his absence, the Company's Chief Executive Officer, or another employee designated by the Compliance Officer shall be responsible for administration of this Policy. All determinations and interpretations by the Compliance Officer shall be final and not subject to further review.

4.4 Statement of Policy

It is the policy of the Company that no Insider of the Company (or any other person designated by this Policy or by the Compliance Officer as subject to this Policy) who is aware of material nonpublic information relating to the Company may, directly, or indirectly through Family Members (as defined below) or other persons or entities:

1. Engage in transactions in Company Securities, except as otherwise specified in this Policy under the headings "*Transactions Under Company Plans,*" "*Transactions Not Involving a Purchase or Sale*" and "*Rule 10b5-1 Plans,*"
 2. Recommend the purchase or sale of any Company Securities;
 3. Disclose material nonpublic information to persons within the Company whose jobs do not require them to have that information, or outside of the Company to other persons, including, but not limited to, family, friends, business associates, investors and expert consulting firms, unless any such disclosure is made in accordance with the Company's policies regarding the protection or authorized external disclosure of information regarding the Company;
 4. Disclose, or participate in the disclosure of, any information related to the Company's business, prospects, financial condition or employees by means of an Internet "chat room" or other similar space on the Internet in which either the Company's business or the value of its securities is discussed or posted.
 5. Assist anyone engaged in the above activities.
-

**Insider Trading Policy**

In addition, it is the policy of the Company that no Insider of the Company (or any other person designated as subject to this Policy) who, in the course of working for the Company, learns of material nonpublic information about a company with which the Company does business, including a customer or supplier of the Company, may trade in that company's securities until the information becomes public or is no longer material.

There are no exceptions to this Policy, except as specifically noted herein. Transactions that may be necessary or justifiable for independent reasons (such as the need to raise money for an emergency expenditure), or small transactions, are not excepted from this Policy. The securities laws do not recognize any mitigating circumstances, and, in any event, even the appearance of an improper transaction must be avoided to preserve the Company's reputation for adhering to the highest standards of conduct.

4.5 Definition of Material Nonpublic Information

Material Information. It is not possible to define all categories of material nonpublic information. However, information should be regarded "material" if a reasonable investor would consider that information important in making a decision to buy, hold or sell securities. Any information that could be expected to affect the Company's stock price, whether it is positive or negative, should be considered material. There is no bright-line standard for assessing materiality; rather, materiality is based on an assessment of all of the facts and circumstances, and is often evaluated by enforcement authorities with the benefit of hindsight. While it is not possible to define all categories of material information, some examples of information that ordinarily would be regarded as material are:

- Projections of future earnings or losses, or other earnings guidance;
 - Changes to previously announced earnings guidance, or the decision to suspend earnings guidance;
 - A pending or proposed merger, acquisition or tender offer;
 - A pending or proposed acquisition or disposition of a significant asset;
 - A pending or proposed joint venture;
 - A Company restructuring;
 - Significant related party transactions;
 - A change in dividend policy, the declaration of a stock split, or an offering of additional securities;
 - Bank borrowings or other financing transactions out of the ordinary course;
 - The establishment of a repurchase program for Company Securities;
 - A change in the Company's pricing or cost structure;
 - Major marketing changes;
 - A change in management;
 - A change in auditors or notification that the auditor's reports may no longer be relied upon;
-

**Insider Trading Policy**

- Development of a significant new product, process, or service;
- Pending or threatened significant litigation, or the resolution of such litigation;
- Impending bankruptcy or the existence of severe liquidity problems;
- The gain or loss of a significant customer or supplier;
- The imposition of a ban on trading in Company Securities or the securities of another company;
- News of major clinical or development milestones;
- The results of clinical trials; and
- Significant communications to or from regulatory agencies or other significant regulatory developments.

When Information is Considered Public. To be “public” the information must have been disseminated in a manner designed to reach investors generally, and the investors must be given the opportunity to absorb the information. Information that has not been disclosed to the public is generally considered to be nonpublic information. In order to establish that the information has been disclosed to the public, it may be necessary to demonstrate that the information has been widely disseminated. Information generally would be considered widely disseminated if it has been disclosed through the newswire services or public disclosure filed with the SEC that are available on the SEC’s website. By contrast, information would likely not be considered widely disseminated if it is available only to the Company’s employees, or if it is only available to a select group of analysts, brokers and institutional investors.

Once information is widely disseminated, it is still necessary to afford the investing public with sufficient time to absorb the information. As a general rule, information should not be considered fully absorbed by the marketplace until such information has been publicly known for at least one full Trading Day. If, for example, the Company were to make an announcement pre-market Monday, you should not trade in Company Securities until market open on Tuesday. Depending on the particular circumstances, the Company may determine that a longer or shorter period should apply to the release of specific material nonpublic information. As used herein, the term “Trading Day” shall mean a day on which the Nasdaq Capital Market (or such other market or exchange on which the Company’s common stock is then listed or traded to the extent such other market or exchange is the principal trading market or exchange for the Company’s common stock) is open for trading.

4.6 Transactions by Family Members and Others

This Policy applies to your family members who reside with you (including a spouse, a child, a child away at college, stepchildren, grandchildren, parents, stepparents, grandparents, siblings and in-laws), anyone else who lives in your household, and any family members who do not live in your household but whose transactions in Company Securities are directed by you or are subject to your influence or control, such as parents or children who consult with you before they trade in Company Securities (collectively referred to as “*Family Members*”). You are responsible for the transactions of these other persons and therefore should make them aware of the need to confer with you before they trade in Company Securities, and you should treat all such transactions for the purposes of this Policy and applicable securities laws as if the transactions were for your own account. This Policy does not, however, apply to personal securities transactions of Family Members where the purchase or sale decision is made by a third party not controlled by, influenced by or related to you or your Family Members.

**Insider Trading Policy****4.7 Transactions by Entities that You Influence or Control**

This Policy applies to any entities that you influence or control, including any corporations, partnerships or trusts (collectively referred to as “*Controlled Entities*”), and transactions by these Controlled Entities should be treated for the purposes of this Policy and applicable securities laws as if they were for your own account.

4.8 Transactions Under Company Plans

This Policy does not apply in the case of the following transactions, except as specifically noted:

Stock Option Exercises. This Policy does not apply to the exercise of an employee stock option acquired pursuant to the Company’s plans if the shares acquired upon exercise are held rather than sold, or to the exercise of a tax withholding right pursuant to which a person has elected to have the Company withhold shares subject to an option to satisfy tax withholding requirements. This Policy does apply, however, to any sale of stock as part of a broker-assisted cashless exercise of an option, or any other market sale for the purpose of generating the cash needed to pay the exercise price of an option.

Restricted Stock Awards. This Policy does not apply to the vesting of restricted stock, or the exercise of a tax withholding right pursuant to which you elect to have the Company withhold shares of stock to satisfy tax withholding requirements upon the vesting of any restricted stock. The Policy does apply, however, to any market sale of restricted stock.

401(k) Plan. This Policy does not apply to purchases of Company Securities in a Company 401(k) plan resulting from your periodic contribution of money to the plan pursuant to your payroll deduction election. This Policy does apply, however, to certain elections you may make under the 401(k) plan, including: (a) an election to increase or decrease the percentage of your periodic contributions that will be allocated to the Company stock fund; (b) an election to make an intra-plan transfer of an existing account balance into or out of the Company stock fund; (c) an election to borrow money against your 401(k) plan account if the loan will result in a liquidation of some or all of your Company stock fund balance; and (d) an election to pre-pay a plan loan if the pre-payment will result in allocation of loan proceeds to the Company stock fund.

Employee Stock Purchase Plan. This Policy does not apply to purchases of Company Securities in an employee stock purchase plan resulting from your periodic contribution of money to the plan pursuant to the election you made at the time of your enrollment in the plan. This Policy also does not apply to purchases of Company Securities resulting from lump sum contributions to the plan, provided that you elected to participate by lump sum payment at the beginning of the applicable enrollment period. This Policy does apply, however, to your election to participate in the plan for any enrollment period, and to your sales of Company Securities purchased pursuant to the plan.

**Insider Trading Policy**

Dividend Reinvestment Plan. This Policy does not apply to purchases of Company Securities under a Company dividend reinvestment plan resulting from your reinvestment of dividends paid on Company Securities. This Policy does apply, however, to voluntary purchases of Company Securities resulting from additional contributions you choose to make to the dividend reinvestment plan, and to your election to participate in the plan or increase your level of participation in the plan. This Policy also applies to your sale of any Company Securities purchased pursuant to the plan.

Sale of Shares to Cover Tax Withholdings. The trading restrictions under this Policy do not apply to the sale of shares of common stock issued upon vesting of stock options, restricted stock units or restricted stock for the limited purpose of covering tax withholding obligations (and any associated broker or other fees) (a "***Sell-to-Cover Transaction***"), so long as you were not in possession of material nonpublic information in compliance with Rule 10b5-1. Sell-to-Cover Transactions must be strictly limited to the number of securities needed to cover such person's tax obligations and you may not be permitted to exercise control over the timing of such sales. Sell-to-Cover Transactions must be pre-approved by the Compliance Officer. This exemption does not apply to plans for sales incident to the exercise of option awards.

Other Similar Transactions. Any other purchase of Company Securities from the Company or sales of Company Securities to the Company are not subject to this Policy.

4.9 Transactions Not Involving a Purchase or Sale

Bona fide gifts are not transactions subject to this Policy, unless the person making the gift has reason to believe that the recipient intends to sell the Company Securities while the Insider is aware of material nonpublic information, or the person making the gift is subject to the trading restrictions specified below under the heading "*Additional Procedures*" and the sales by the recipient of the Company Securities occur during a blackout period. Further, transactions in mutual funds that are invested in Company Securities are not transactions subject to this Policy.

4.10 Special and Prohibited Transactions

The Company has determined that there is a heightened legal risk and/or the appearance of improper or inappropriate conduct if the persons subject to this Policy engage in certain types of transactions. It therefore is the Company's policy that any persons covered by this Policy may not engage in any of the following transactions, or should otherwise consider the Company's preferences as described below:

Short-Term Trading. Short-term trading of Company Securities may be distracting to the person and may unduly focus the person on the Company's short-term stock market performance instead of the Company's long-term business objectives. For these reasons, any Insider of the Company who purchases Company Securities in the open market may not sell any Company Securities of the same class during the six months following the purchase (or vice versa) unless you first pre-clear the proposed transaction with the Chief Compliance Officer.

**Insider Trading Policy**

Short Sales. No Insider shall engage in a short sale of the Company's Securities. A short sale is in general a sale of securities not owned by the seller. Transactions in certain put and call options for the Company's Securities may in some instances constitute a short sale. Short sales of Company Securities may evidence an expectation on the part of the seller that the securities will decline in value, and therefore have the potential to signal to the market that the seller lacks confidence in the Company's prospects. In addition, short sales may reduce a seller's incentive to seek to improve the Company's performance. For these reasons, short sales of Company Securities are prohibited. In addition, Section 16(c) of the Securities Exchange Act of 1934, as amended (the "***Exchange Act***") prohibits officers and directors from engaging in short sales at any time that the Company is subject to such section.

Publicly-Traded Options. Given the relatively short term of publicly-traded options, transactions in options may create the appearance that a director, officer or employee is trading based on material nonpublic information and focus a director's, officer's or other employee's attention on short-term performance at the expense of the Company's long- term objectives. Accordingly, transactions in put options, call options or other derivative securities, on an exchange or in any other organized market, by an Insider are prohibited by this Policy. (Option positions arising from certain types of hedging transactions are governed by the paragraph below captioned "***Hedging Transactions.***")

Hedging Transactions. Hedging or monetization transactions can be accomplished through a number of possible mechanisms, including through the use of financial instruments such as prepaid variable forwards, equity swaps, collars and exchange funds. Such hedging transactions may permit an Insider to continue to own Company Securities obtained through employee benefit plans or otherwise, but without the full risks and rewards of ownership. When that occurs, the Insider may no longer have the same objectives as the Company's other shareholders. As a result, these types of transactions are prohibited by Company policy.

Margin Accounts and Pledged Securities. Securities held in a margin account as collateral for a margin loan may be sold by the broker without the customer's consent if the customer fails to meet a margin call. Similarly, securities pledged (or hypothecated) as collateral for a loan may be sold in foreclosure if the borrower defaults on the loan. Because a margin sale or foreclosure sale may occur at a time when the pledgor is aware of material nonpublic information or otherwise is not permitted to trade in Company Securities, Insiders are prohibited from holding Company Securities in a margin account or otherwise pledging Company Securities as collateral for a loan.

Standing and Limit Orders. Standing and limit orders (except standing and limit orders under approved Rule 10b5-1 Plans, as described below) create heightened risks for insider trading violations similar to the use of margin accounts. There is no control over the timing of purchases or sales that result from standing instructions to a broker, and as a result the broker could execute a transaction when an Insider is in possession of material nonpublic information. The Company therefore discourages placing standing or limit orders on Company Securities. If a person subject to this Policy determines that they must use a standing order or limit order, the order should be limited to short duration and should otherwise comply with the restrictions and procedures outlined below under the heading "***Additional Procedures.***"

**Insider Trading Policy****4.11 Additional Procedures**

The Company has established additional procedures in order to assist the Company in the administration of this Policy, to facilitate compliance with laws prohibiting insider trading while in possession of material nonpublic information, and to avoid the appearance of any impropriety. These additional procedures are applicable only to those individuals described below.

Pre-Clearance Procedures. All officers, directors and such other persons designated by the Compliance Officer because of their access to the Company's internal financial statements or other material nonpublic information regarding the Company's performance during annual and quarterly fiscal periods as well as the Family Members and Controlled Entities of such persons ("Designated Insiders") may not engage in any transaction in Company Securities without first obtaining pre-clearance of the transaction from the Compliance Officer. A request for pre-clearance should be submitted to the Compliance Officer at least one business days in advance of the proposed transaction. The Compliance Officer is under no obligation to approve a transaction submitted for pre-clearance, and may determine not to permit the transaction. If a person seeks pre-clearance and permission to engage in the transaction is denied, then he or she should refrain from initiating any transaction in Company Securities, and should not inform any other person of the restriction.

When a request for pre-clearance is made, the requestor should carefully consider whether he or she may be aware of any material nonpublic information about the Company, and should describe fully those circumstances to the Compliance Officer. The requestor should also indicate whether he or she has effected any non-exempt "opposite-way" transactions within the past six months, and should be prepared to report the proposed transaction on an appropriate Form 4 or Form 5, if the Company is then subject to Section 16. The requestor should also be prepared to comply with SEC Rule 144 and file Form 144, if necessary, at the time of any sale.

Pre-cleared trades must be effected within five business days of receipt of pre-clearance unless an exception is granted. Transactions not effected within such time limit are subject to pre-clearance again.

Quarterly Trading Restrictions. Designated Insiders may not conduct any transactions involving the Company's Securities (other than as specified by this Policy) during a "Blackout Period" beginning at the end of each fiscal quarter and ending at the end of the trading on the next business day after the date of the public release of the Company's earnings results for that quarter. The sensitivity arises because directors, officers and certain employees involved in the preparation of the financial results will often possess material nonpublic information.

**Insider Trading Policy**

Event-Specific Trading Restriction Periods. From time to time, an event may occur that is material to the Company and is known by only a few directors, officers and/or employees. So long as the event remains material and nonpublic, the Designated Insiders may not trade Company Securities. In addition, the Company's financial results may be sufficiently material in a particular fiscal quarter that, in the judgment of the Compliance Officer, designated persons should refrain from trading in Company Securities even sooner than the typical Blackout Period described above. In that situation, the Compliance Officer may notify these persons that they should not trade in the Company's Securities, without disclosing the reason for the restriction. The existence of an event-specific trading restriction period or extension of a Blackout Period will not be announced to the Company as a whole, and should not be communicated to any other person. Even if the Compliance Officer has not designated you as a person who should not trade due to an event-specific restriction, you should not trade while aware of material nonpublic information.

Exceptions. The quarterly trading restrictions and event-driven trading restrictions do not apply to those transactions to which this Policy does not apply, as described above under the headings "*Transactions Under Company Plans*" and "*Transactions Not Involving a Purchase or Sale.*" Further, the requirement for pre-clearance, the quarterly trading restrictions and event-driven trading restrictions do not apply to transactions conducted pursuant to approved Rule 10b5-1 plans, described under the heading "*Rule 10b5-1 Plans.*"

4.12 Rule 10b5-1 Plans

Rule 10b5-1 under the Exchange Act provides a defense from insider trading liability under Rule 10b-5. In order to be eligible to rely on this defense, a person subject to this Policy must enter into a Rule 10b5-1 plan for transactions in Company Securities that meets certain conditions specified in the Rule (a "***Rule 10b5-1 Plan***"). If the plan meets the requirements of Rule 10b5-1, Company Securities may be purchased or sold without regard to certain insider trading restrictions. To comply with the Policy, a Rule 10b5-1 Plan must be approved by the Compliance Officer and meet the requirements of Rule 10b5-1 and the Company's "Guidelines for Rule 10b5-1 Plans," which are attached hereto. In general, a Rule 10b5-1 Plan must be entered into at a time when the person entering into the plan is not aware of material nonpublic information. Once the plan is adopted, the person must not exercise any influence over the amount of securities to be traded, the price at which they are to be traded or the date of the trade. The plan must either specify the amount, pricing and timing of transactions in advance or delegate discretion on these matters to an independent third party.

Any Rule 10b5-1 Plan must be submitted for approval five days prior to the entry into the Rule 10b5-1 Plan. No further pre-approval of transactions conducted pursuant to the Rule 10b5-1 Plan will be required.

**Insider Trading Policy****4.13 Post-Termination Transactions**

This Policy continues to apply to transactions in Company Securities even after termination of service to the Company. If an individual is in possession of material nonpublic information when his or her service terminates, that individual may not trade in Company Securities until that information has become public or is no longer material. The pre-clearance procedures specified under the heading “*Additional Procedures*” above, however, will cease to apply to transactions in Company Securities upon the expiration of any Blackout Period or other Company-imposed trading restrictions applicable at the time of the termination of service.

4.14 Consequences of Violations

The purchase or sale of securities while aware of material nonpublic information, or the disclosure of material nonpublic information to others who then trade in the Company’s Securities, is prohibited by the federal and state laws. Insider trading violations are pursued vigorously by the SEC, U.S. Attorneys and state enforcement authorities as well as the laws of foreign jurisdictions. Punishment for insider trading violations is severe, and could include significant fines and imprisonment. While the regulatory authorities concentrate their efforts on the individuals who trade, or who tip inside information to others who trade, the federal securities laws also impose potential liability on companies and other “controlling persons” if they fail to take reasonable steps to prevent insider trading by company personnel.

In addition, an individual’s failure to comply with this Policy may subject the individual to Company-imposed sanctions, including dismissal for cause, whether or not the employee’s failure to comply results in a violation of law. Needless to say, a violation of law, or even an SEC investigation that does not result in prosecution, can tarnish a person’s reputation and irreparably damage a career.

4.15 Company Assistance

Any person who has a question about this Policy or its application to any proposed transaction may obtain additional guidance from the Compliance Officer, who can be reached by telephone at 972-3-691-7691 or by e-mail at craigs@inspiremd.com.

4.16 Certification

All persons subject to this Policy must certify their understanding of, and intent to comply with, this Policy.

5 Responsibility

The Finance Controllers have the overall responsibility for implementing the Insider Trading Policy, ensuring that all employees sign the Insider Trading Form.

The CEO has final approval over any future changes to the Policy.

**Insider Trading Policy****Appendix 1 - GUIDELINES FOR RULE 10B5-1 PLANS**

Rule 10b5-1 under the Securities Exchange Act of 1934, as amended (the “*Exchange Act*”), provides a defense from insider trading liability under Rule 10b-5. In order to be eligible to rely on this defense, a person subject to this Policy must enter into a Rule 10b5-1 plan for transactions in Company Securities (as defined in the Insider Trading Policy) that meets certain conditions specified in the Rule (a “*Rule 10b5-1 Plan*”). If the plan meets the requirements of Rule 10b5-1, Company Securities may be purchased or sold without regard to certain insider trading restrictions. In general, a Rule 10b5-1 Plan must be entered into at a time when the person entering into the plan is not aware of material nonpublic information. Once the plan is adopted, the person must not exercise any influence over the amount of securities to be traded, the price at which they are to be traded or the date of the trade. The plan must either specify the amount, pricing and timing of transactions in advance or delegate discretion on these matters to an independent third party.

As specified in the Company’s Insider Trading Policy, a Rule 10b5-1 Plan must be approved by the Compliance Officer and meet the requirements of Rule 10b5-1 and these guidelines. Any Rule 10b5-1 Plan must be submitted for approval five days prior to the entry into the Rule 10b5-1 Plan. No further pre-approval of transactions conducted pursuant to the Rule 10b5-1 Plan will be required.

The following guidelines apply to all Rule 10b5-1 Plans:

- You may not enter into, modify or terminate a trading program during a blackout period or while in possession of material nonpublic information. Entering into, modifying, revoking, or early termination of a Rule 10b5-1 Plan must be approved in advance by the Compliance Officer.
- Rule 10b5-1 Plans must include a representation certifying that at the time of the adoption or modification: (1) you are not aware of material, nonpublic information about the Company or its securities; and (2) you are adopting the plan in good faith and not as part of a plan or scheme to evade the prohibitions of Rule 10b-5.
- All Rule 10b5-1 Plans must have a duration of at least 61 months and no more than 12 years.
- If a Rule 10b5-1 Plan is terminated, you must wait at least 30 days before trading outside of the Rule 10b5-1 Plan.
- If a trading program is terminated, you must wait until the end of the current or next Blackout Period (as defined in the Insider Trading Policy), whichever is sooner, before a new Rule 10b5-1 plan may be adopted.
- You may not commence sales under a trading program until (i) for directors, officers and other Section 16 insiders, the later of: (1) 90 days after plan adoption; or (2) two (2) business days following the public disclosure of the Company’s annual financial results in a Form 10-K or quarterly financial results in a Form 10-Q (but not to exceed 120 days following plan adoption); and (ii) for individuals not covered by (i), at least 30 days following the date of establishment of a trading program.
- The waiting period requirement described above will apply to any modification to the amount, price or timing of a purchase or sale (including changes to related formulae) under an existing Rule 10b5-1 Plan. Trading under your Rule 10b5-1 Plan will continue pursuant to the original terms of your Rule 10b5-1 Plan until this waiting period has elapsed, at which time the modified Rule 10b5-1 Plan will become effective or the revocation or termination of the plan (as applicable).

**Insider Trading Policy**

- Following any permitted revocation or early termination of a Rule 10b5-1 Plan, you may not establish a new Rule 10b5-1 Plan until the commencement of the next open trading window.
- You may not have more than one Rule 10b5-1 Plan in effect at any given time (i.e. “*multiple overlapping plans*”), subject to certain limited exceptions that comport with the requirements of Rule 10b5-1 relating to multiple or overlapping plans.
 - This restriction on multiple overlapping plans will not apply to a plan adopted solely and exclusively for the purpose of selling Company Securities in the open market or through a broker to satisfy a person’s tax obligations through a “sell-to-cover” method in connection with the vesting of equity awards (“*Sell-to-Cover Plans*”). Sales under Sell-to-Cover Plans must be strictly limited to the number of securities needed to cover such person’s tax obligations and the award holder may not be permitted to exercise control over the timing of such sales. This exemption does not apply to plans for sales incident to the exercise of option awards.
- You may not adopt more than one Rule 10b5-1 Plan to execute a single trade during any consecutive 12-month period, subject to certain limited exceptions that comport with the requirements of Rule 10b5-1. This restriction does not apply to Sell-to-Cover Plans.
- If you are director, officer and other Section 16 insider, you must also confirm that all trades made pursuant to the Rule 10b5-1 Plan will be made in accordance with Rule 144 under the Securities Act of 1933, as amended.
- You may not engage in any trades of the Company’s securities outside of the Rule 10b5-1 Plan while a plan is in effect.

Each director, officer and other Section 16 insider understands that the approval or adoption of a pre-planned selling program in no way reduces or eliminates such person’s obligations under Section 16 of the Exchange Act, including such person’s disclosure and short-swing trading liabilities thereunder. If any questions arise, such person should consult with their own counsel in implementing a Rule 10b5-1 Plan. Each director, officer and other Section 16 insider seeking to establish a new Rule 10b5-1 Plan, or amend or modify an existing Rule 10b5-1 Plan, will be required to provide a written representation to the Company certifying that such director or officer (i) will deliver a copy of any such Rule 10b5-1 Plan, including any amendments or modifications thereto, to the Compliance Officer and (ii) consents to the disclosure of the material terms of any such Rule 10b5-1 Plan, including any amendments or modifications thereto, in the Company’s Exchange Act reports.

None of the requirements or plan terms currently contemplated by this Appendix to the the Company’s Insider Trading Policy are exhaustive or limiting on the Company. The Company has the right to require the inclusion of additional provisions in your Rule 10b5-1 Plan designed to protect you and/or the Company, whether before or after the Rule 10b5-1 Plan has been approved by the Compliance Officer, or to delete or amend existing provisions.

CONSENT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

CERTIFICATION OF CHIEF EXECUTIVE OFFICER PURSUANT TO RULE 13a-14(a)

I, Marvin Slosman, certify that:

1. I have reviewed this Annual Report on Form 10-K of InspireMD, Inc. (the “registrant”);
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - c) Evaluated the effectiveness of the registrant’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d) Disclosed in this report any change in the registrant’s internal control over financial reporting that occurred during the registrant’s most recent fiscal quarter (the registrant’s fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant’s internal control over financial reporting; and
5. The registrant’s other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant’s auditors and the audit committee of the registrant’s board of directors (or persons performing the equivalent functions):
 - a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant’s ability to record, process, summarize and report financial information; and
 - b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant’s internal control over financial reporting.
